

How to use Clean Master on a computer

Clean Master is a free, professional cleaning software for computer users. It provides comprehensive cleaning methods to clear cache, unused files, and erase browsing history on your computer. Below is a guide on how to use Clean Master for your reference.

Clean Master is a very popular computer cleaning software due to its powerful, deep scanning capabilities, ability to quickly clean the entire system, and its compact size and user-friendly interface. In addition, Clean Master is also developed for the Android operating system, and its one-touch speed-up feature on Android is highly rated. This article will guide you on how to use Clean Master on your computer. Please refer to it.

Instructions on using Clean Master software to clean up and speed up your computer.

Requirements:

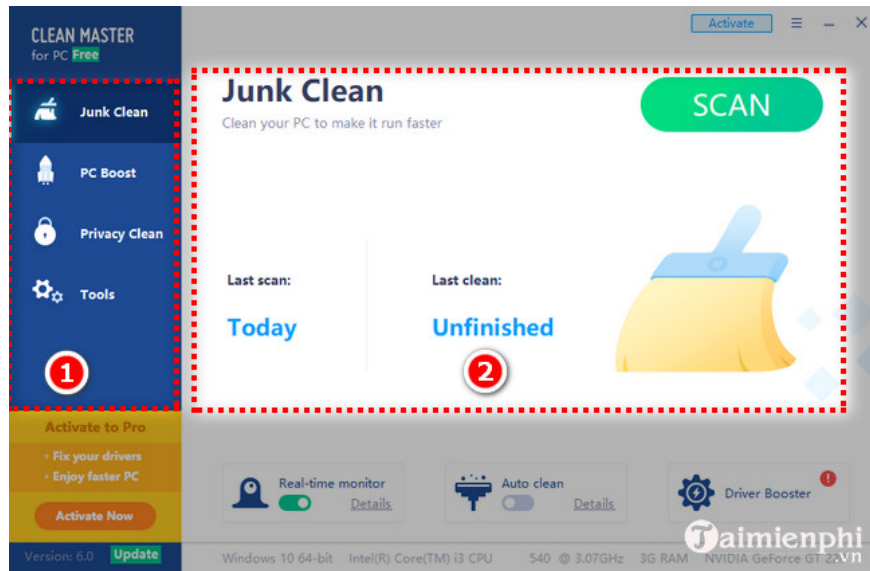

- A computer with Clean Master installed
- If you haven't installed the software, download Clean Master here:

For detailed instructions on how to install the software, please refer to this link:

Clean Master consists of two main parts:

1 - Left menu : This menu contains software features such as: Junk Clean, PC Boot, Security Check (Privac), and other tools.

2 - Right side : where the actions are displayed when the user activates the feature.

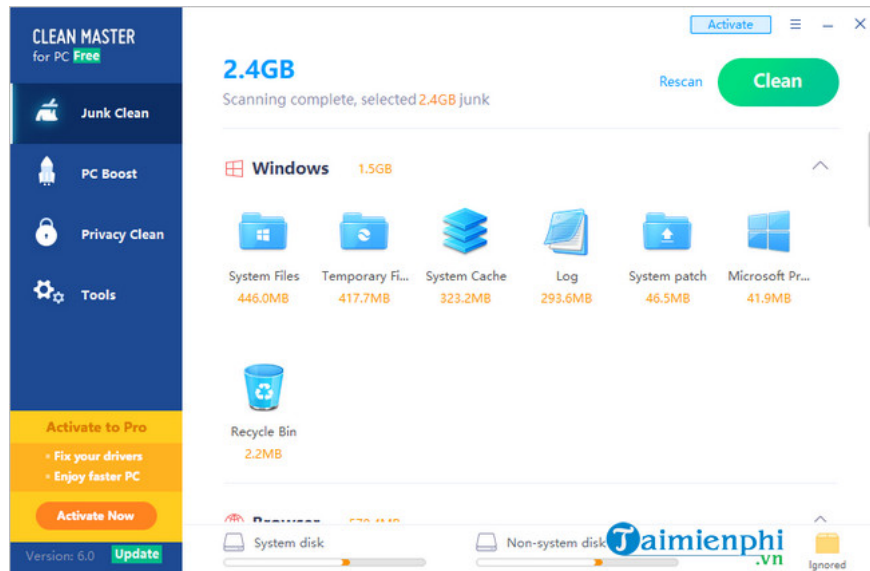

1. *Junk Clean* - Cleans up the system, deletes junk files.

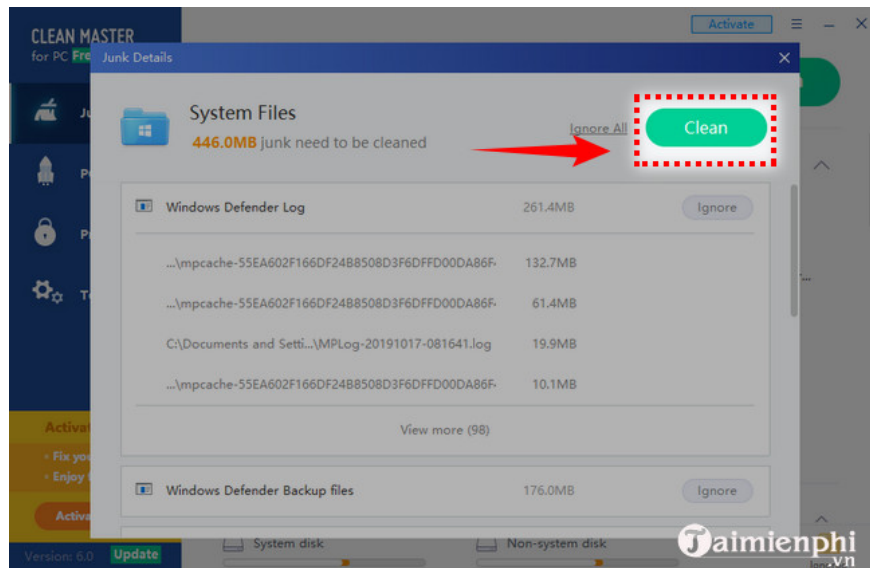

To clean up junk files, in the Junk Clean section, click **Scan** to scan all files currently on your computer.

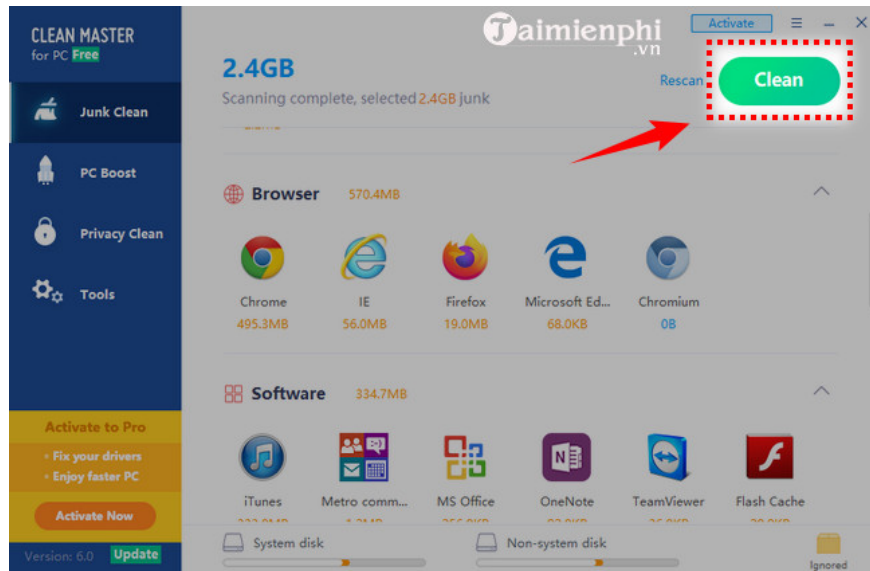

The files that take up the most space on a computer are those in Windows, followed by junk files from browsers, then from software, multimedia, and so on.

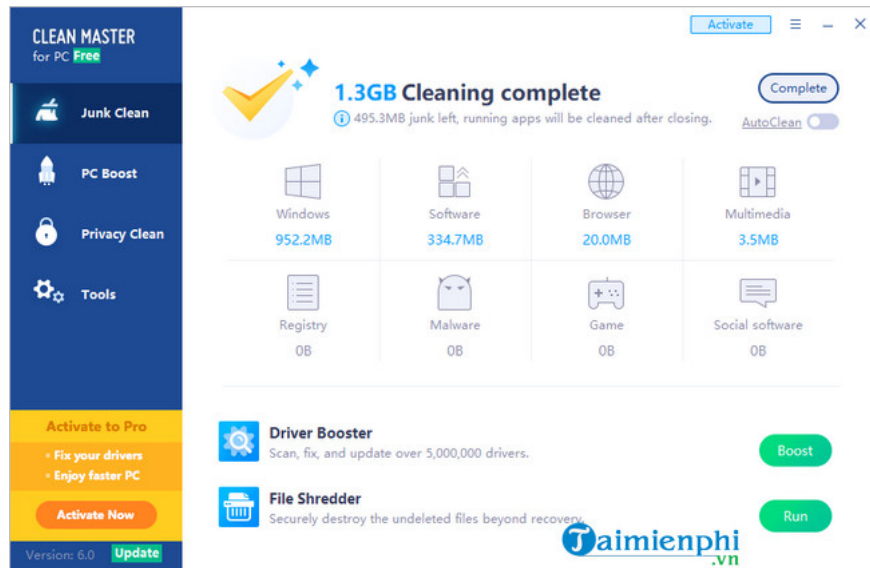

Each category will show the amount of junk files occupying on the system. Click on each category if you want to see details of how much space they are using. Click **Clean** to delete the junk files.

Alternatively, you can click on **Clean** to delete all junk files on your system.

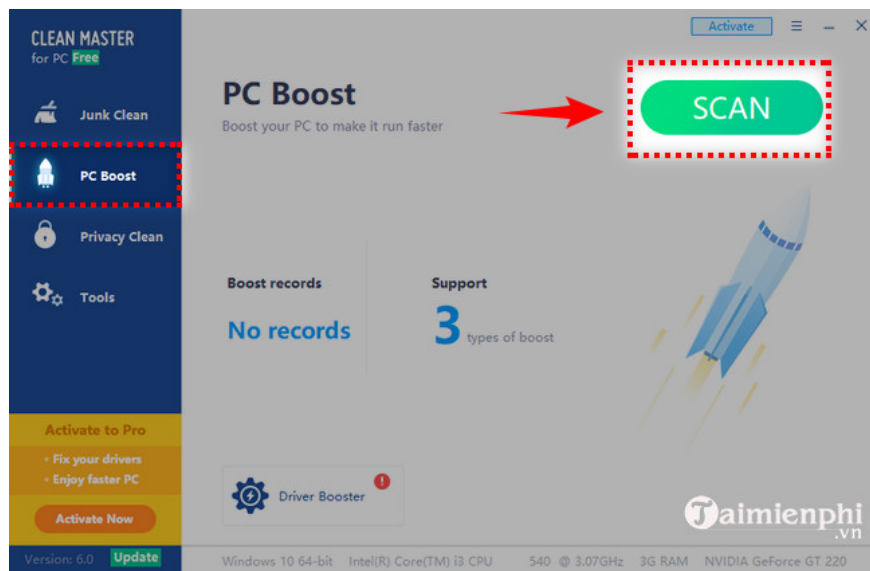

After the cleanup is complete, the software will display the amount of files that have been cleaned, along with details of the amount of space deleted for each item such as Windows, software, browser, games, etc.

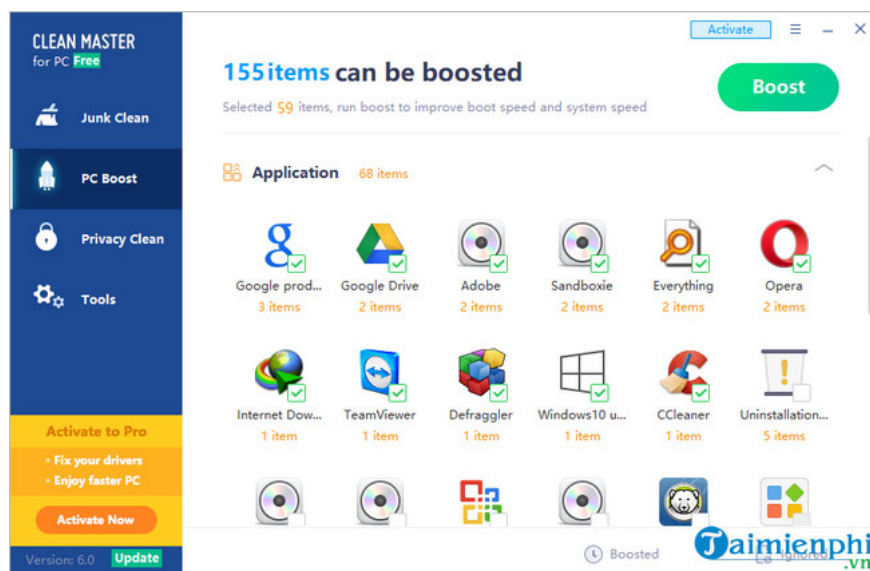

2. PC Boost - Speed ???up your computer

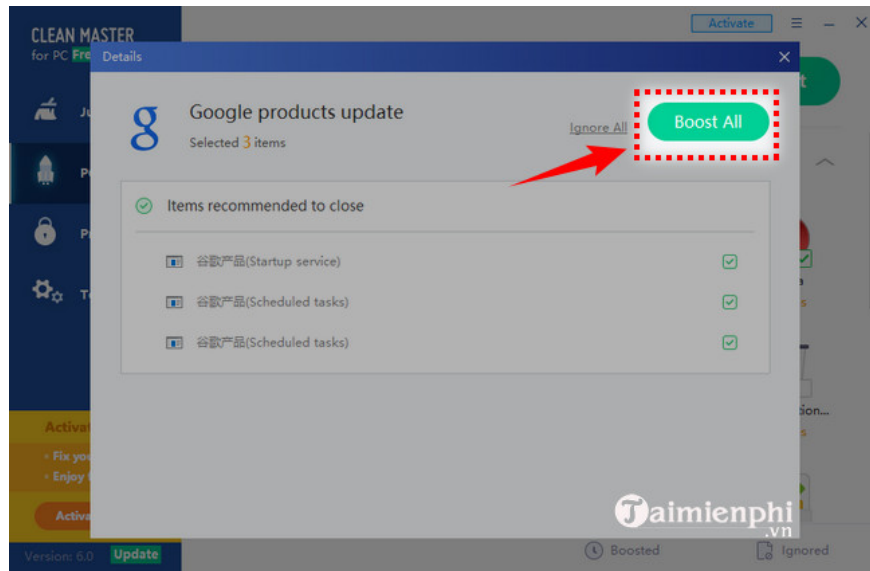

To speed up your computer, click on the **PC Boost** option . Then click the **Scan** button to proceed.

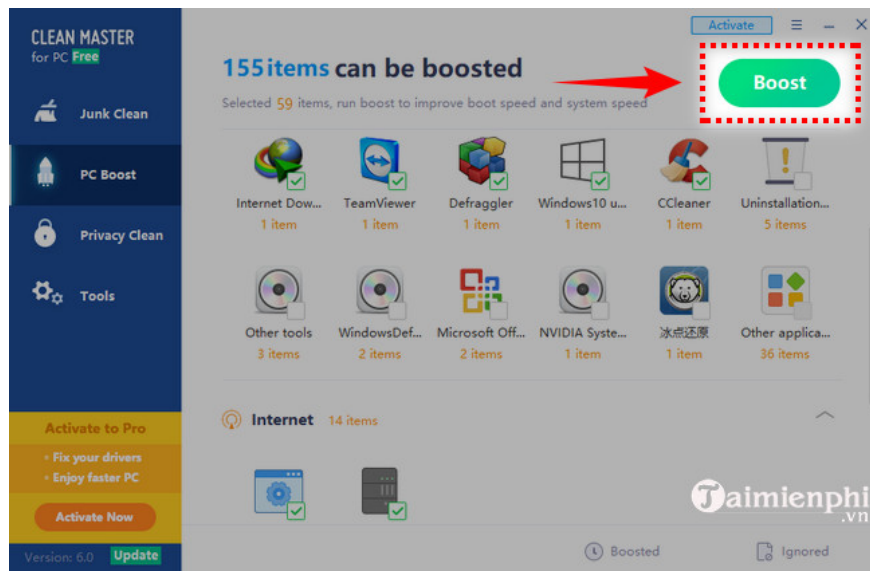

Similar to the Junk Clean section, you can click on each item to see the applications that Clean Master has detected and list which applications need to be "freed".

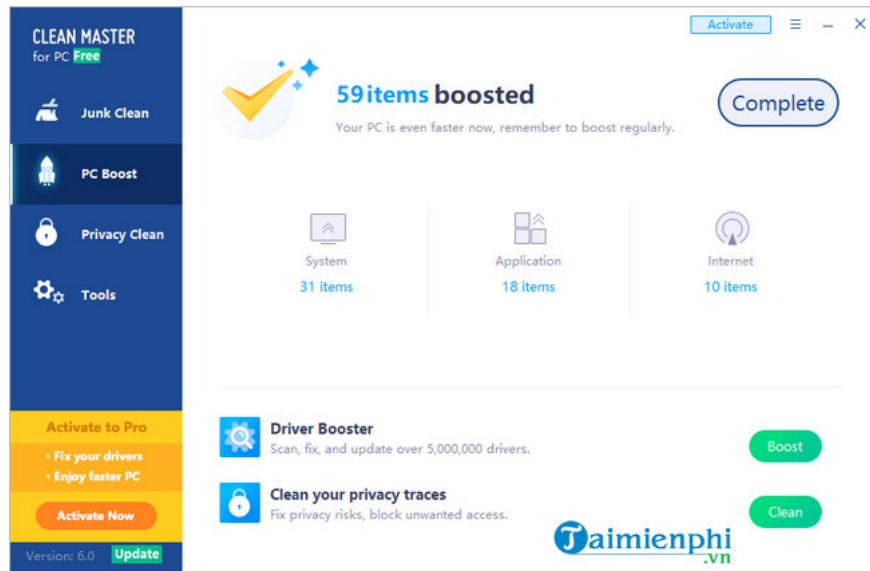

Select the plugins that are running in the background of the application, then click **Boost All** to disable them.

Alternatively, you can click the **Boost** button to speed up your computer's overall performance.

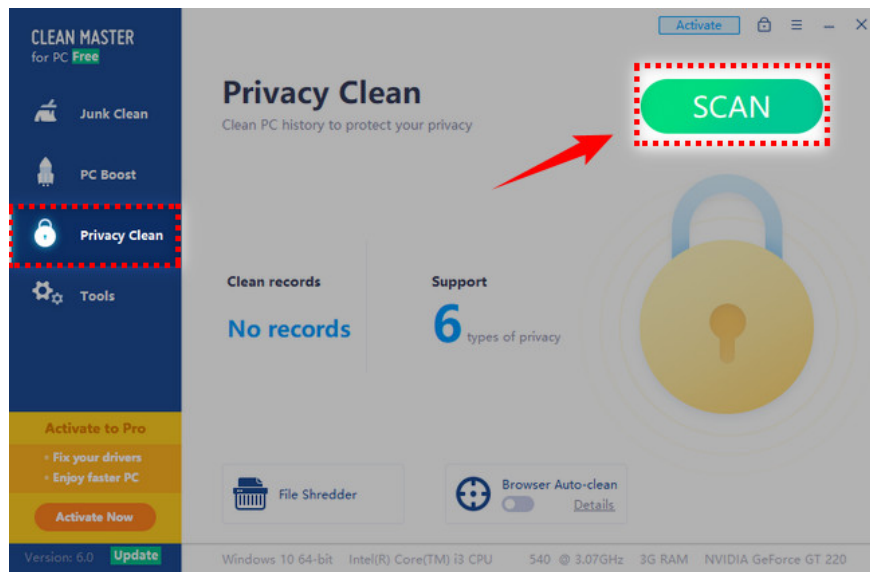

Once the boosting process is complete, the software will display a list of applications that have been boosted to increase speed, including applications, system files, etc.

3. Privacy Clean - System Security

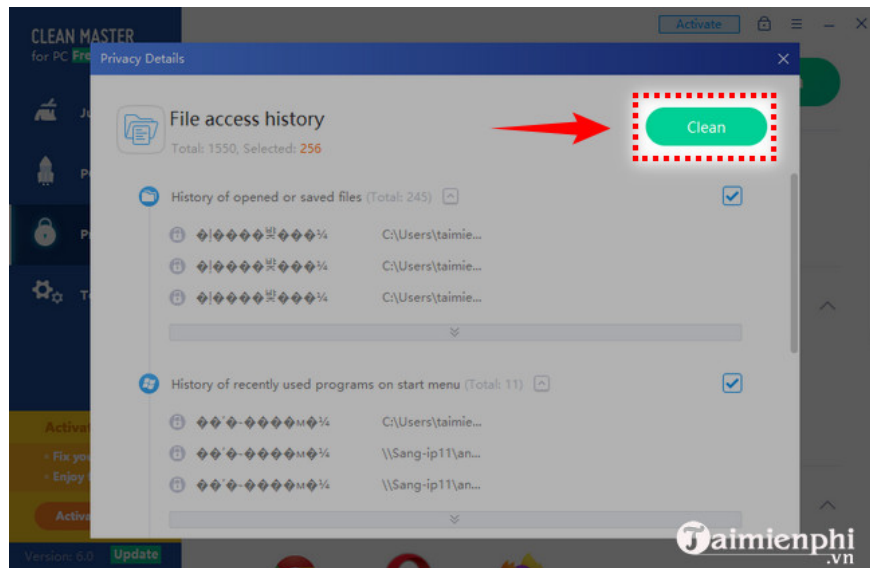

To do this, go to the **Privacy Clean** menu and click the **Scan** button to start the system check.

Once the cleaning process is complete, it will show you information about your website visits, first-time app usage, saved app activity logs, etc. Click **Clean** to clean up all activity logs.

Alternatively, you can select a specific application or software whose access logs you want to delete; simply click on each application and then click **Clean**.

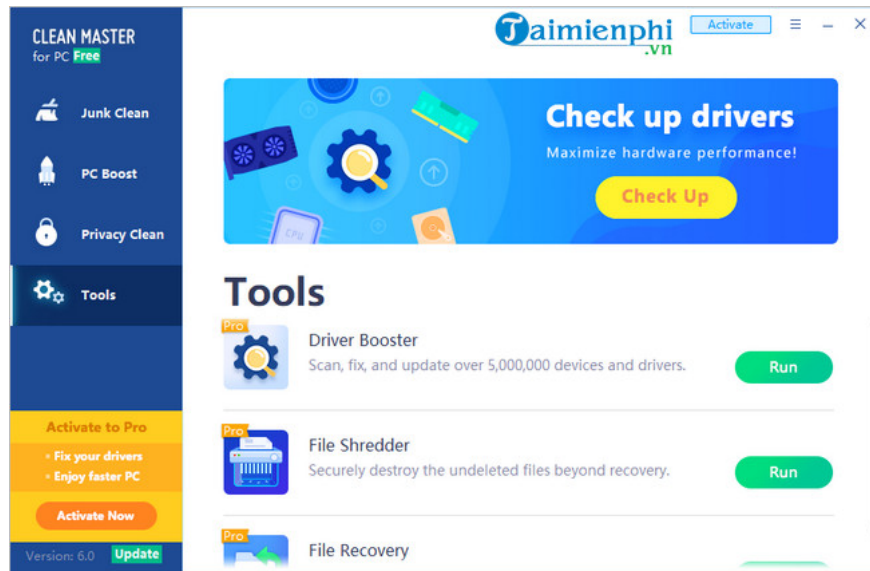

4. Tools - Tools for drivers, file deletion, and data recovery.

Note: These are advanced tools, so you need to pay to use them.

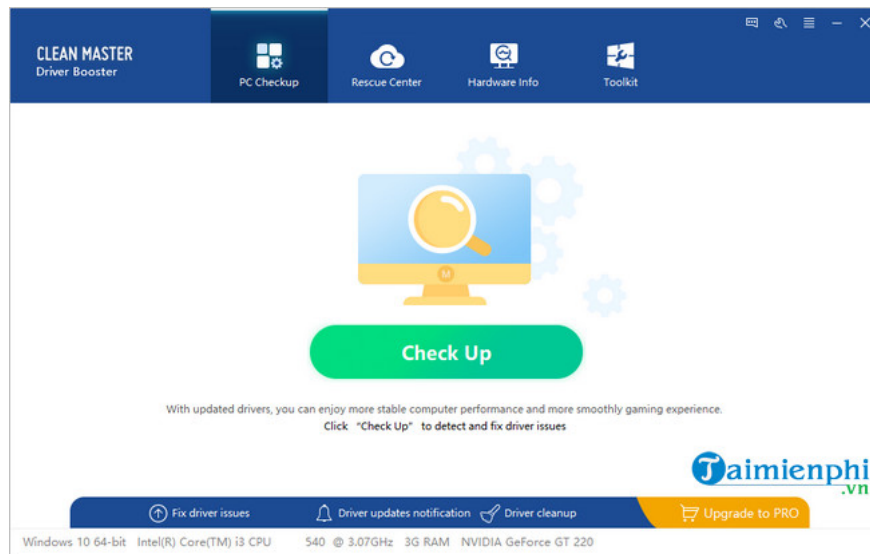

Click on the Tools menu and you will see 3 tools, including:

- **Driver Booster** : Scans, repairs, and updates drivers for over 5,000,000 devices.
- **File Shredder** : Securely destroys files that were not deleted during the recovery process.
- **File Recovery**: Supports all file formats and easily recovers lost data.

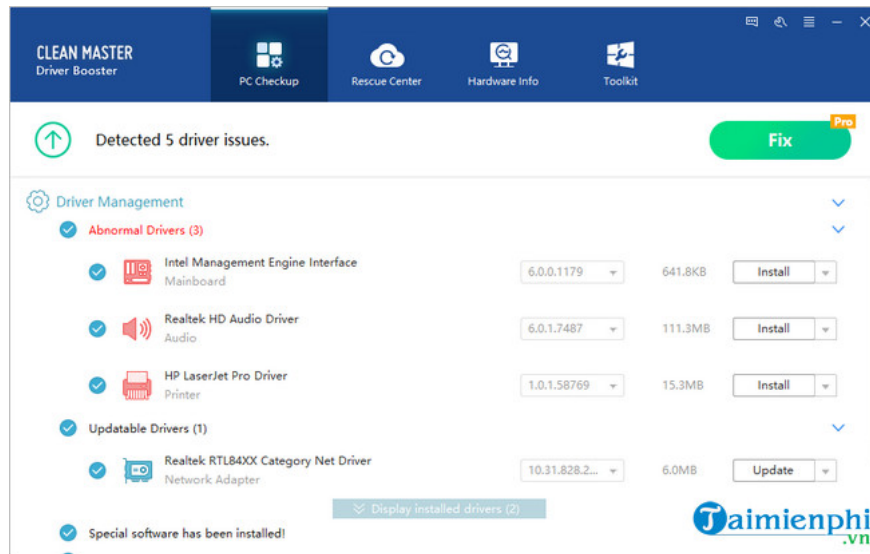

***Driver Booster:**

Clicking the Run button in Driver Booster will open a new window containing tools such as: **PC Checkup**, **Rescue Center**, **Hardware Info**, **Toolkit**, and **File Shredder**.

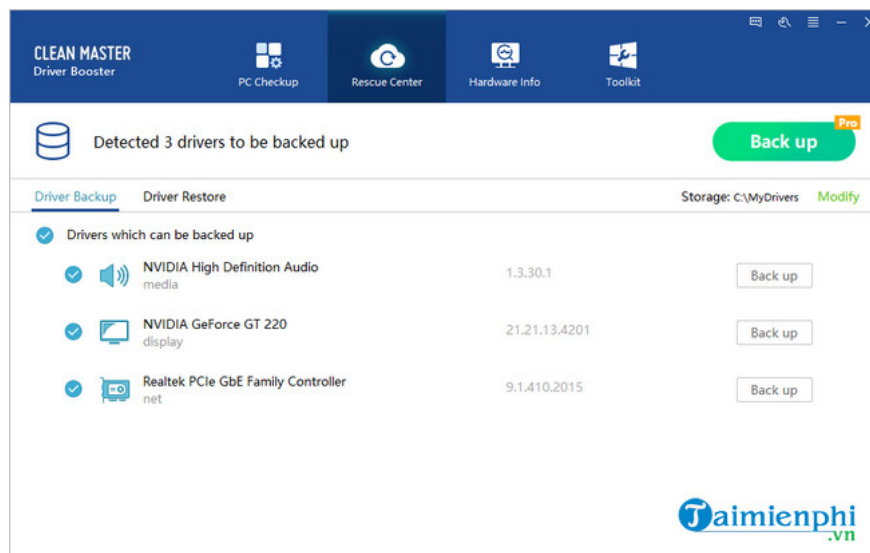

- **PC Checkup** : helps manage and update the latest drivers.

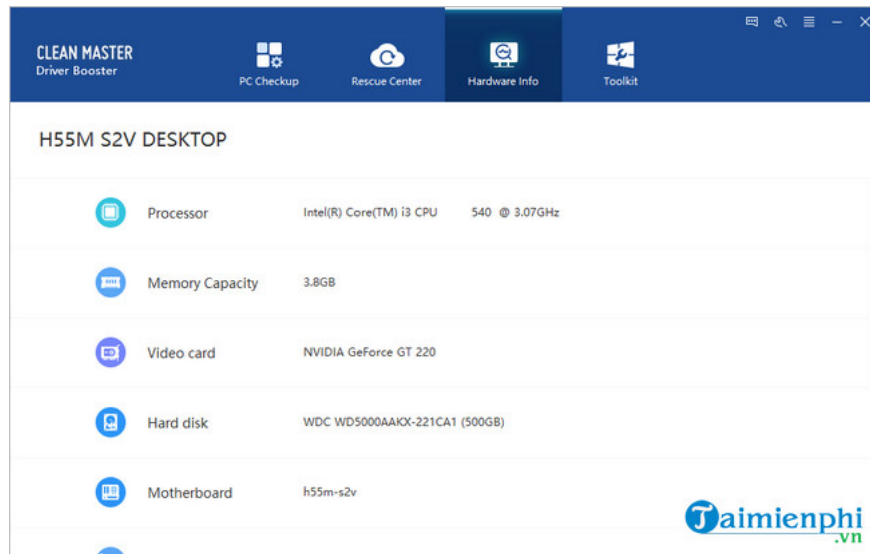

Simply click on **Check Up** , and the software will search for missing or outdated drivers. Then click **Install** to have Clean Master automatically install the drivers for you.

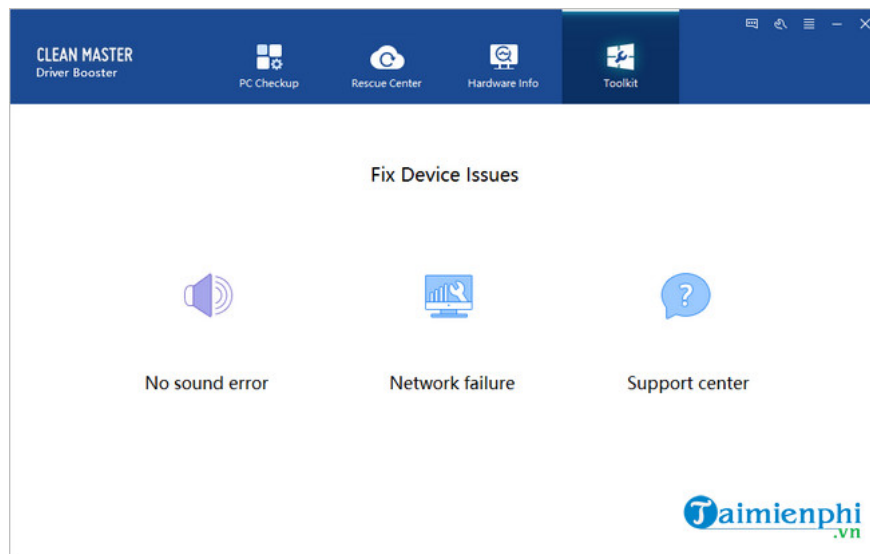

- **Rescue Center:** This helps back up the drivers currently on your computer. Click on **Back up** to back up your existing drivers. This will allow you to restore the drivers for each hardware component whenever they encounter problems.

- **Hardware Info:** This section allows you to see all of your computer's hardware, including RAM capacity, CPU name, hard drive capacity and name, etc.

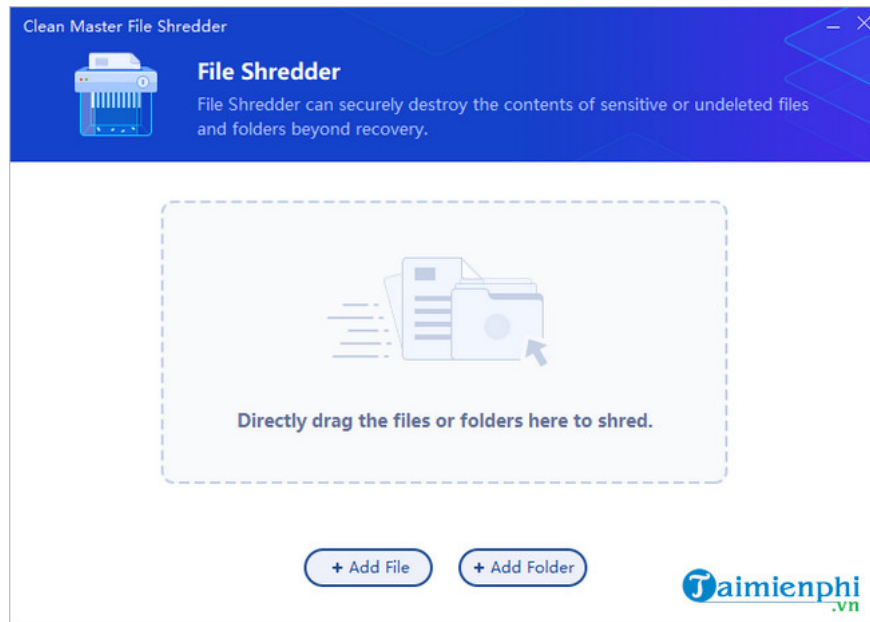

- **Toolkit:** allows you to check for audio and connection problems on your computer.

File Shredder

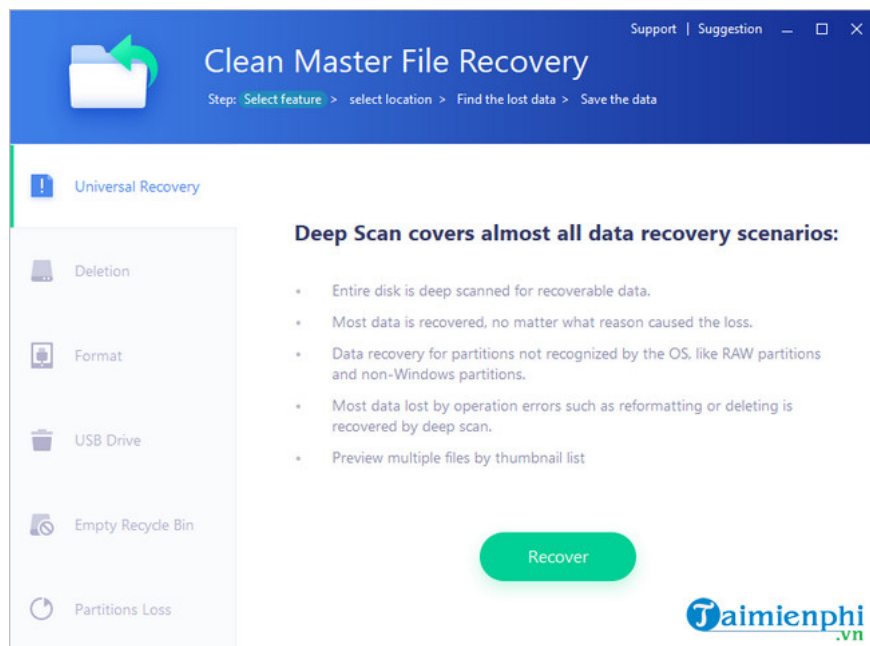

This allows you to securely delete files that haven't been permanently removed during the recovery process. Simply drag and drop the files/folders into the application, and the software will securely delete them.

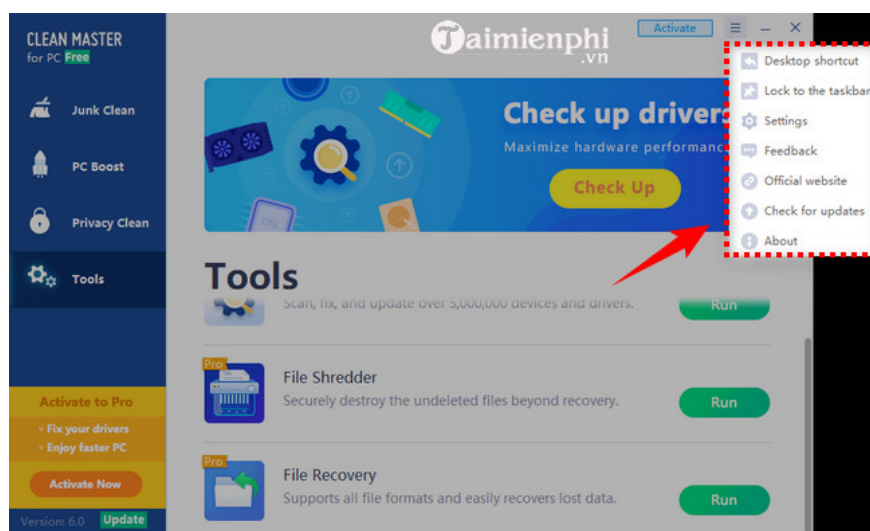

File Recovery

Clicking on this item will open a new window containing tools such as:

- + **Universal Recovery** : Deep Scan covers almost all data recovery scenarios.
- + **Deletion** : Recovers permanently deleted files and folders.
- + **Format** : Restores the file after reformatting.
- + **USB Drive** : Recover data from external storage devices such as USB drives and external hard drives.
- + **Empty Recycle Bin** : Restore files and folders from the Recycle Bin.
- + **Partitions Loss** : Recover data from partitions or from a single partitioned disk.

Additionally, there are a few other minor options in the application settings such as: creating a shortcut for the software on the desktop, pinning it to the taskbar, selecting the language, setting up automatic scanning, and checking for new versions.

With this article, you will be able to easily use Clean Master to speed up your computer. No more stuttering, lagging, or slow performance, and you can comfortably work and play on your computer.
