## How to protect your computer when surfing the web

### Step 1:

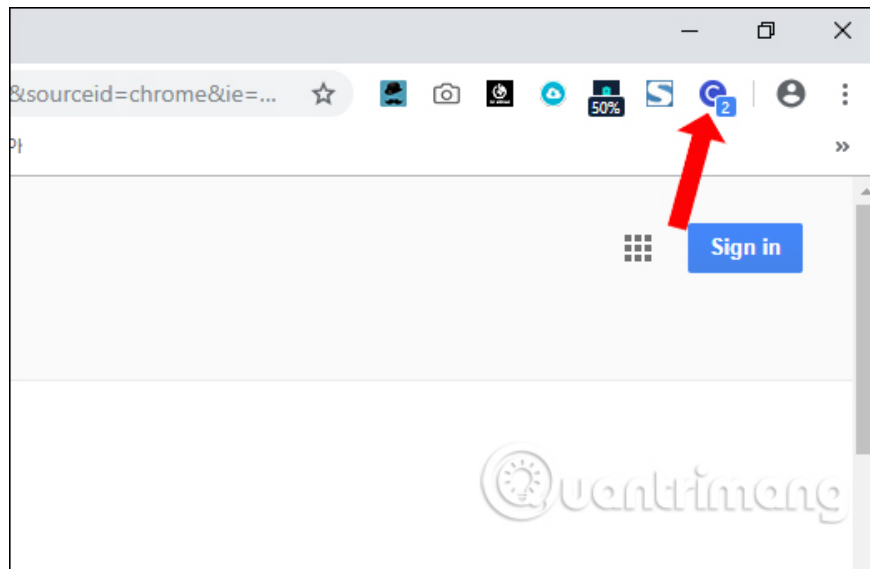

You download Cludopt AdBlocker utility following the link below for the browser you are using.

1. Download Cludopt AdBlocker Chrome
2. Download Cludopt AdBlocker Firefox
3. Download Cludopt AdBlocker Microsoft Edge

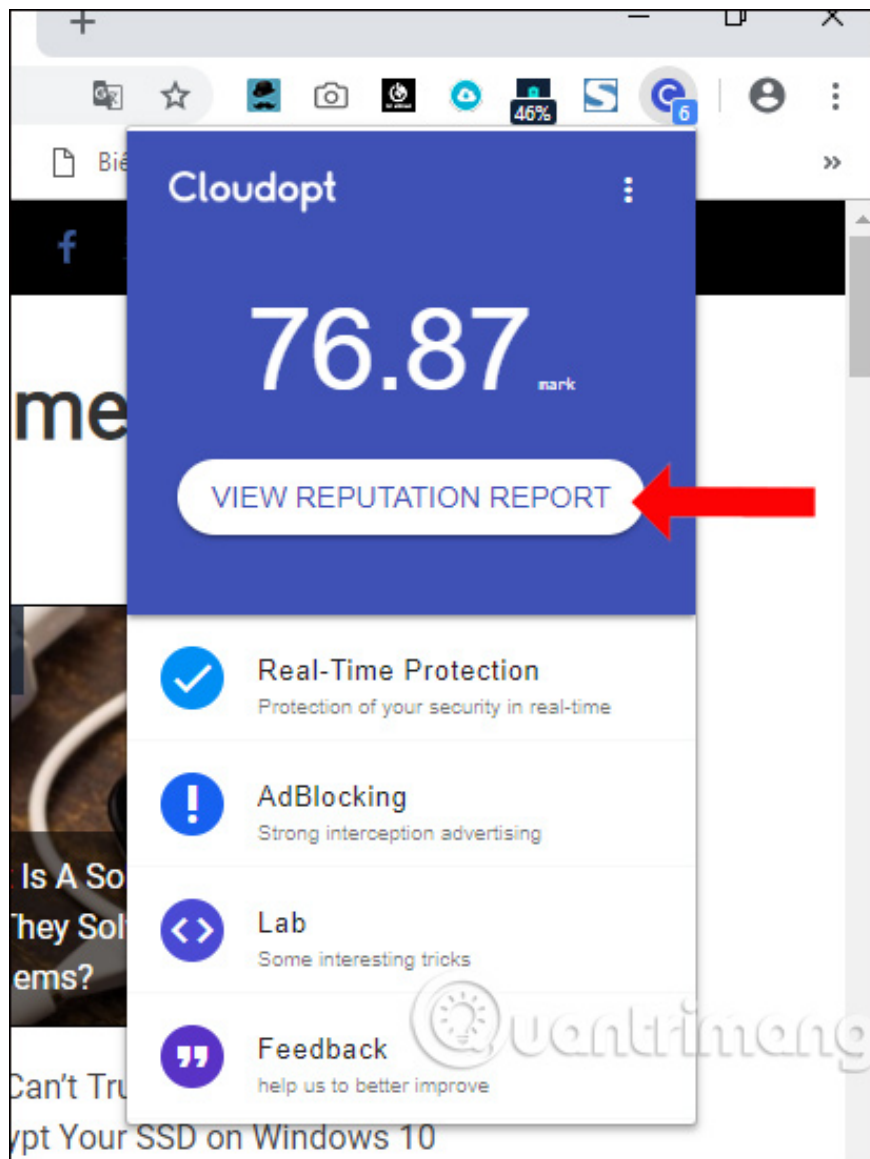

**Step 2:**

Now when you open any website you will see at **the utility icon** at the end of the toolbar that displays the number of ads and components that the gadget tracks and detects.

**Step 3:**

Cloudopt AdBlocker also has its own user community and regularly reviews websites. Click on the utility icon and select **View Reputation Report** to see more information about the site.

The **Summary information** section will display information about the site and the security alert when accessing it.

# Cludopt

## Summary information

Name

Domain www.howtogeek.com

Safe State SAFE

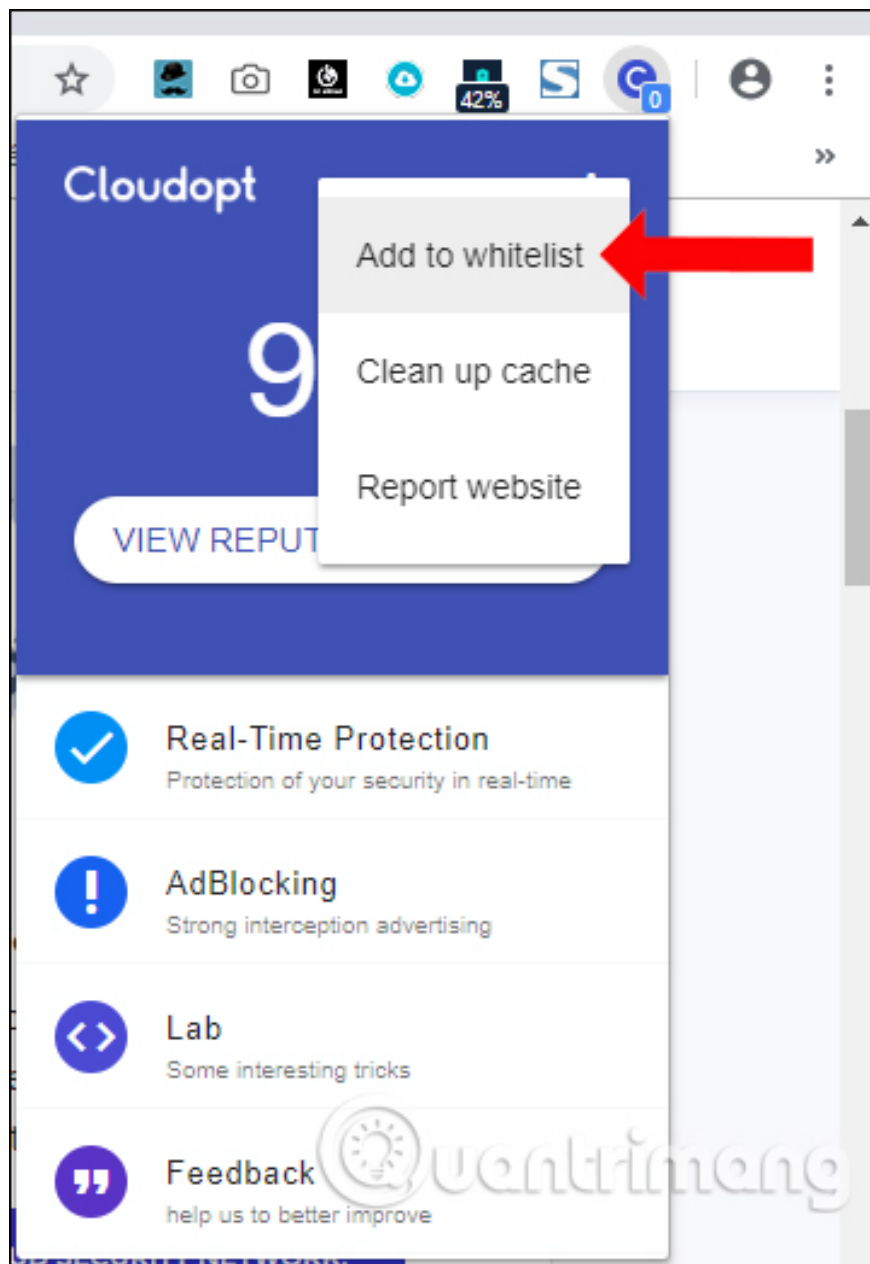

Credit rating score 76.87

category UNKOWN

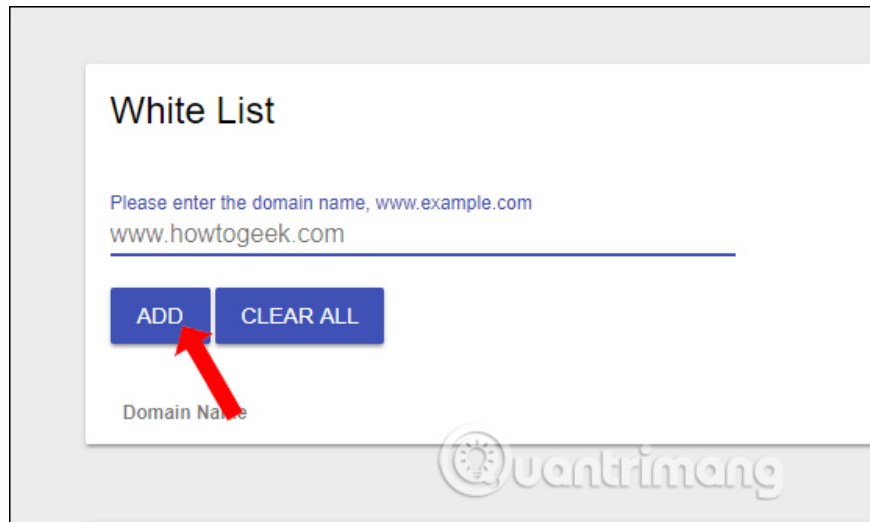

### Step 4:

By default the utility will block all ads on the page. But in certain cases where the user wants to see the ad, the site can be whitelisted. Click on **the widget icon** and then press **the three dots button** and select **Add to whitelist** .

Show the new page interface to the **White list** section and then enter the website domain name and click **Add** .

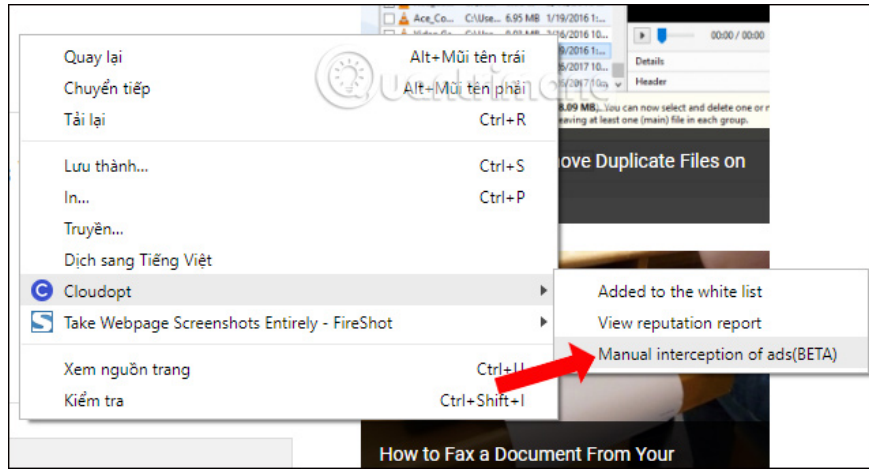

Continue to do the same with other websites that want to unblock ads. When you want to block the cable, click the trash button at that domain.

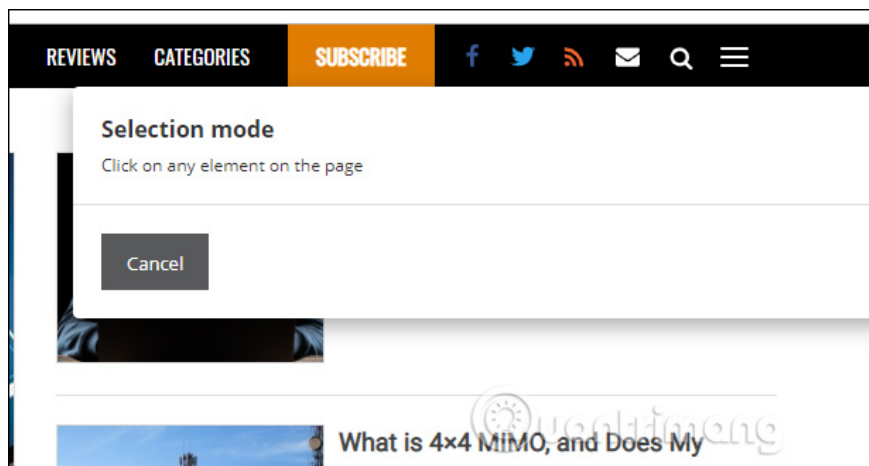

### Step 5:

In addition to blocking ads, malicious websites, Cloudopt AdBlocker utility also allows removing content displayed on the page.

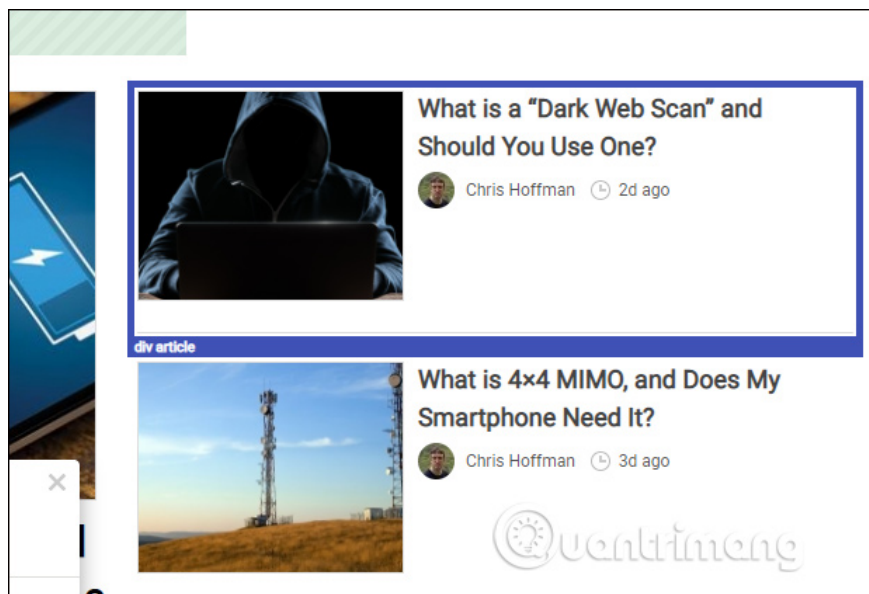

Right-click on the website and select **Cloudopt> Manual interception of ads (BETA)** .

This will display the **Selection mode** frame so that the user selects the content to be removed on the site.

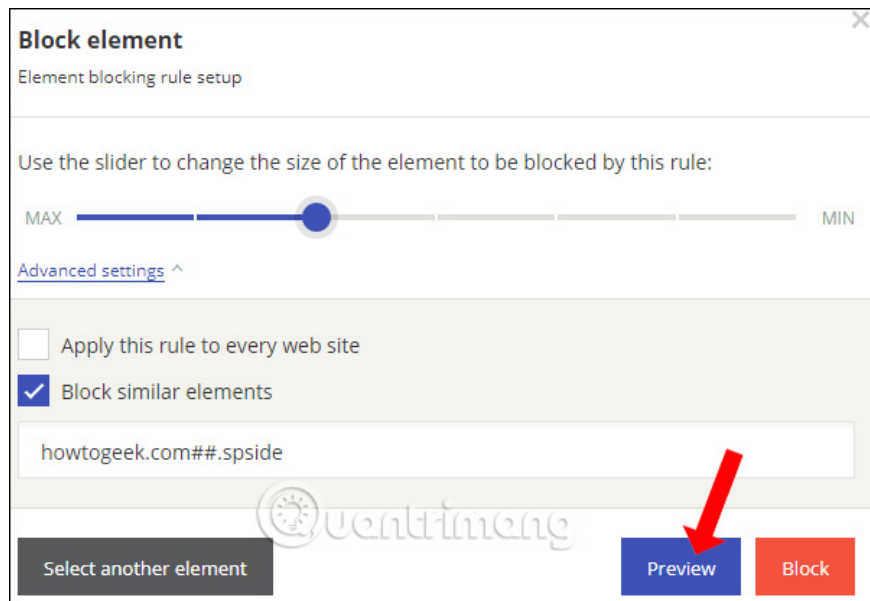

For example, with this website, I want to hide the content to see the right side of the page, then click on the content.

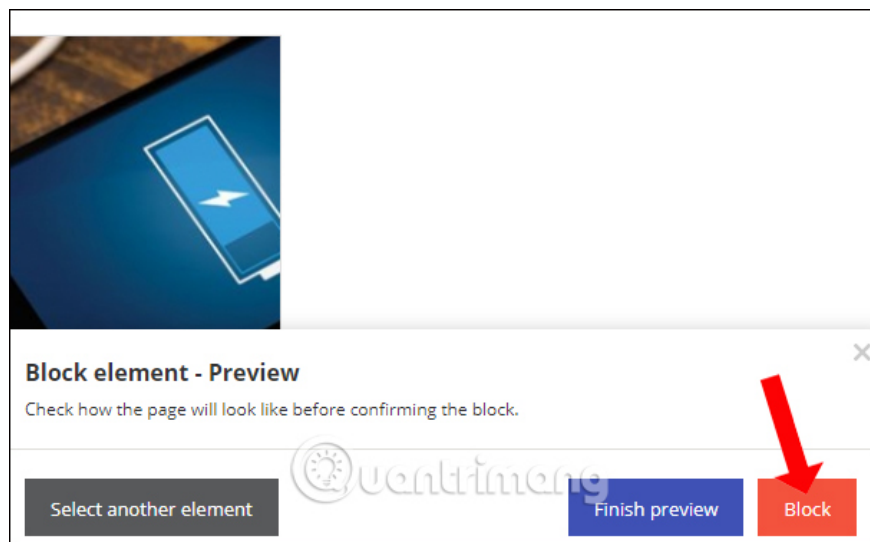

## Step 6:

After selecting the content to hide, it will display the Block element table. Here you can **adjust the hidden content area** by dragging the circle button to Max to expand the content area, reducing the hidden area towards Min.

Clicking **Advanced settings** will have the option to apply this rule to every website or similar component on the page. Click Preview to preview the hidden interface with the selected content.

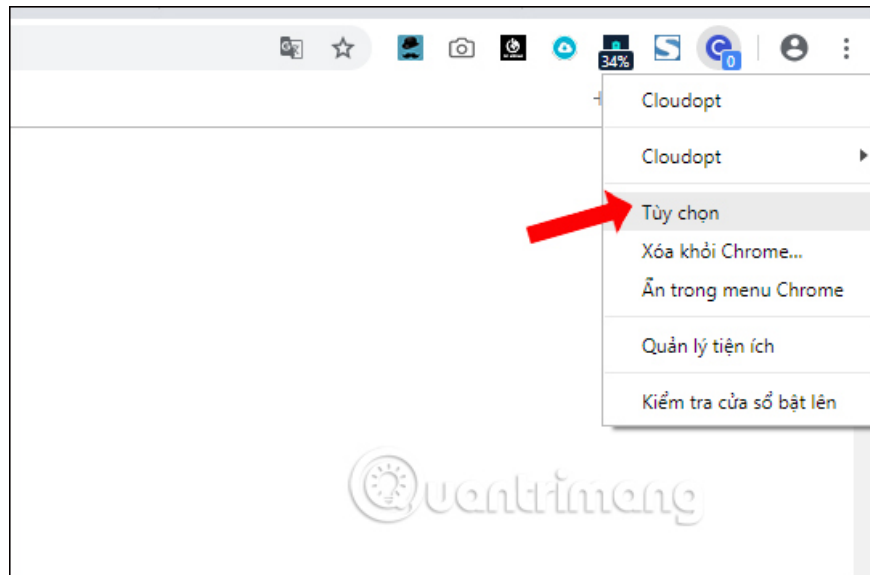

The page interface will look like the image below. Finally, click the Block button to block the content.

## Step 7:

To display the hidden content again, right-click the utility icon, select **Options**.

In the new content, go to the **Custom Filter** section and see the hidden content area on the page. Click the **trash can icon** to unhide the content on the site.

Cloudopt Adblocker utility brings many options to protect your computer when surfing the web, blocking ads, hiding content that you don't want to display. So when surfing the web, the computer will be more secure.
