

How to use Datally to save Internet data on Android

Datally application comes from Google, which has the ability to manage Internet storage and data on Android devices, helping you to access Facebook, Instagram without losing too much space.

After launching the **Files Go** system management application, Google continues to launch Datally application with mobile data saving features, Internet data management on smartphone devices.

Accordingly, the application will help users to manage 3G / 4G capacity when using special Internet on social networking sites, surfing Facebook, Instagram, . Applications that use a lot of network capacity will be actively listed. Statistics, so we can know and limit use. In particular, Datally has the ability to close underground applications that are silently connecting to the Internet via 3G / 4G networks, saving unnecessary waste of space. Also, when using Datally you can find free Wi-Fi hotspots. The following article will guide you how to use Datally to manage Internet capacity.
