Some other notes about Driver Talent

As a beginner, Driver Talent looks beautiful. The interface is simple and neat, without any additional ads or menus that distract users. This makes the use much easier.

The **Drivers Status** tab tells you which drivers need to be repaired and backed up. The function button in this tab does both: download and install the appropriate driver and back up the drivers that have not been backed up. This feature is very popular because it is like a summary of all the problems Driver Talent has found, and it allows users to fix these problems with a single button.

We recommend using Driver Talent to find drivers for your device, although it does not support mass downloads like some other driver update tools. Users must start scanning manually, but certainly then Driver Talent will search and download them himself.

Note: While installing Driver Talent, you may be asked to install some other things that you do not need, like the browser toolbar. You can refuse if you don't want to add it to your computer because you don't need it to use Driver Talent.
