

# How to use Ghostery to block tracking on a Web browser

Ghostery is an application that tracks and observes people who intentionally visit your website. Special utility will not reveal or provide any user information. Compact utility, taking up very little memory resources.

Did you know that whenever we visit any website, you may be sharing data about your own online habits, from clicking or sharing through social networking sites. That's because many websites use a variety of third-party invisibility software to monitor user behavior.

To prevent online tracking, the best way is to use blocking tools, such as the Ghostery utility. This utility can prevent Analytic Scripts, Widgets, Web beacons, Privacy scripts and ads. Specially disable scripts on the Web browser. In this article, Network Administrator will show you how to use the Ghostery utility to block tracking on the Web browser.

## Prevent tracking on the browser with Ghostery

### Step 1:

Ghostery is a utility and is preinstalled on the browser. In this article we use on Chrome browser.

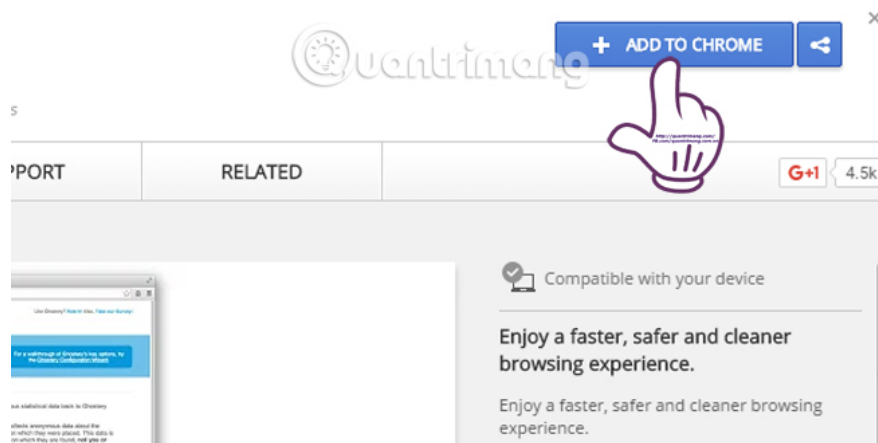

1. Download Ghostery for Chrome
2. Download Ghostery for Firefox

Also, if you use another browser such as IE or Safari, you can download the corresponding utility for each browser according to the link below.

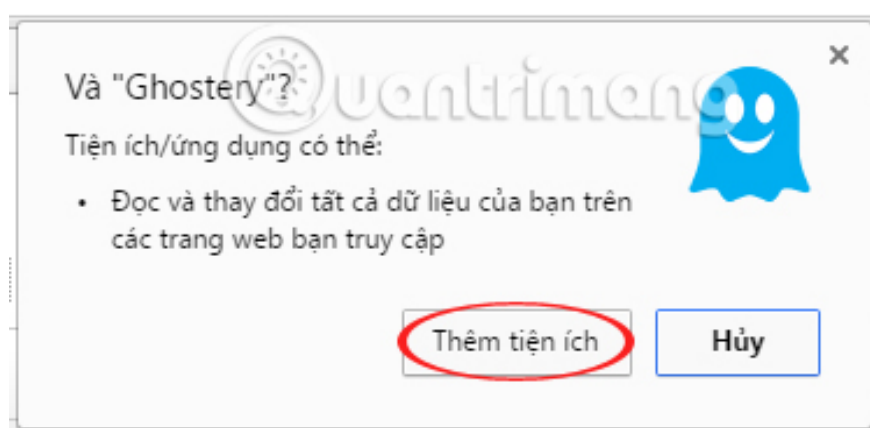

1. Download Ghostery for the browser

### Step 2:

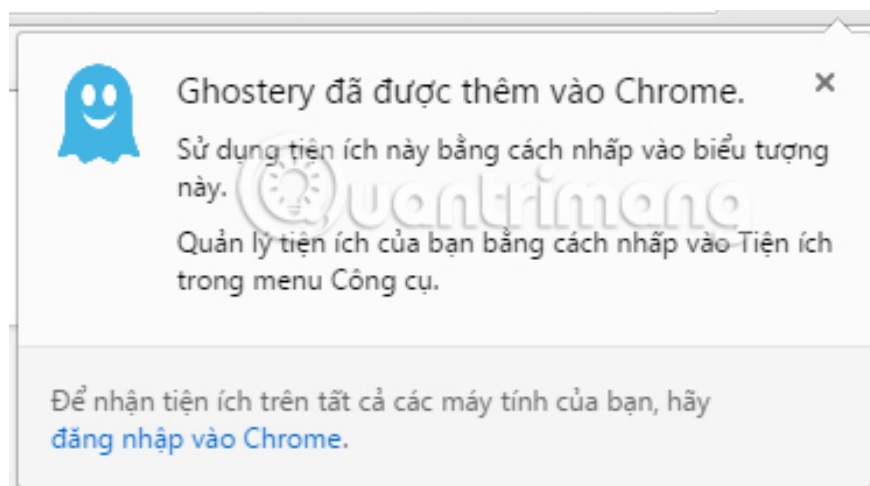

Click **Add to Chrome** to install the utility.

Next, click on **Add add-on** to complete the installation of the Ghostery utility in the browser.

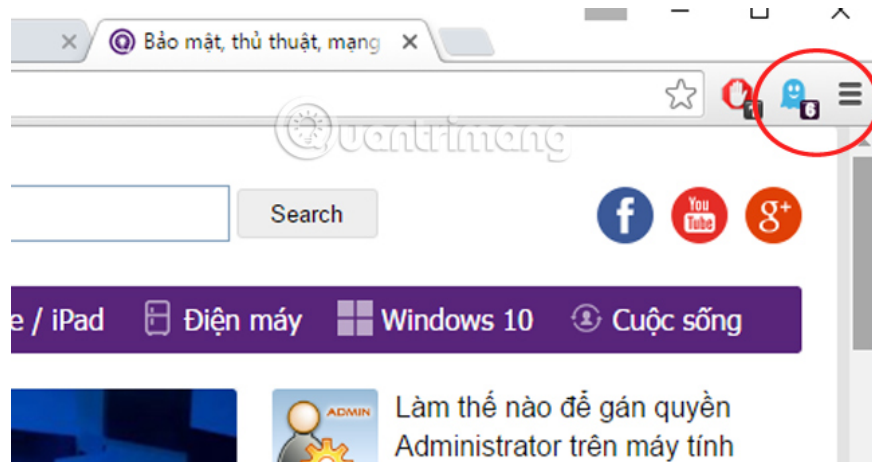

Immediately after successful installation, the utility will notify the successful installation for the user and appear the last icon of the address bar on the Chrome browser.

**Step 3:**

Soon, we can use the utility to find out what service is following you when entering the browser. We will take the example when visiting the TipsMake.com website.

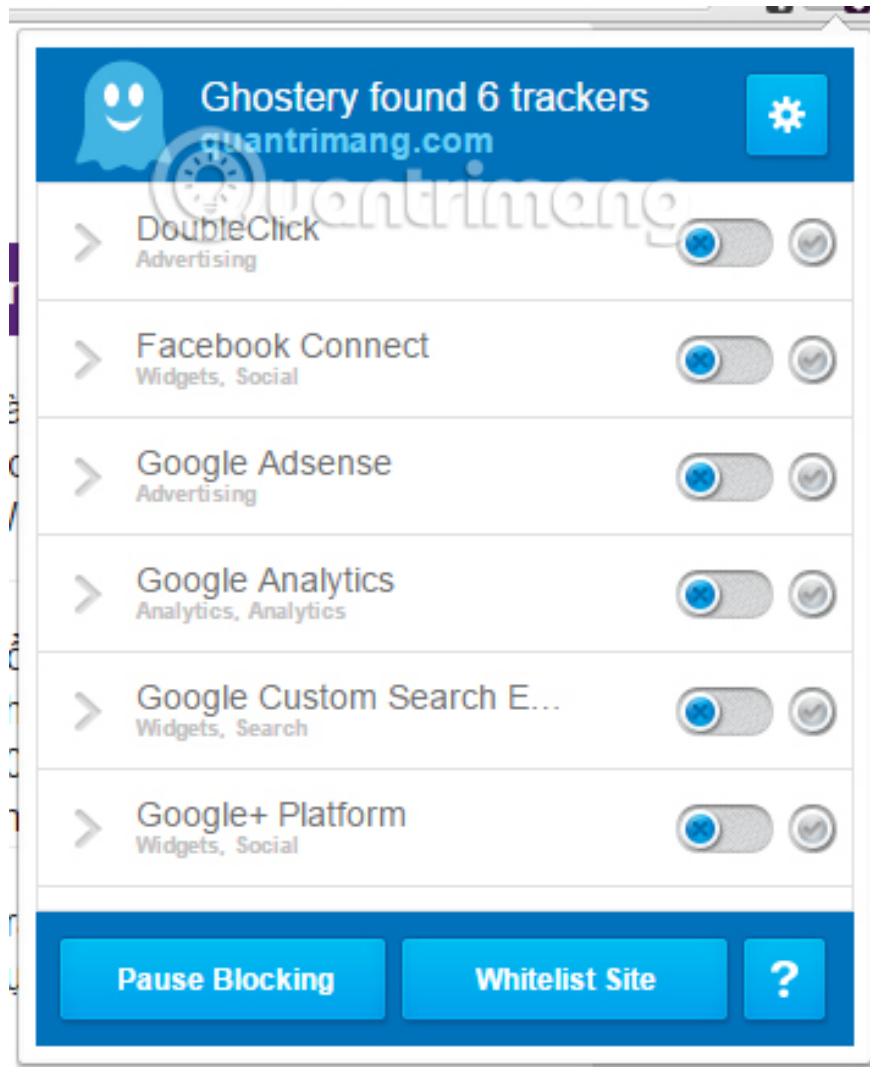

Here, you will see **an automatic number appear on the widget's icon** , corresponding to the **number of 3rd party services on that site that track you** .

#### Step 4:

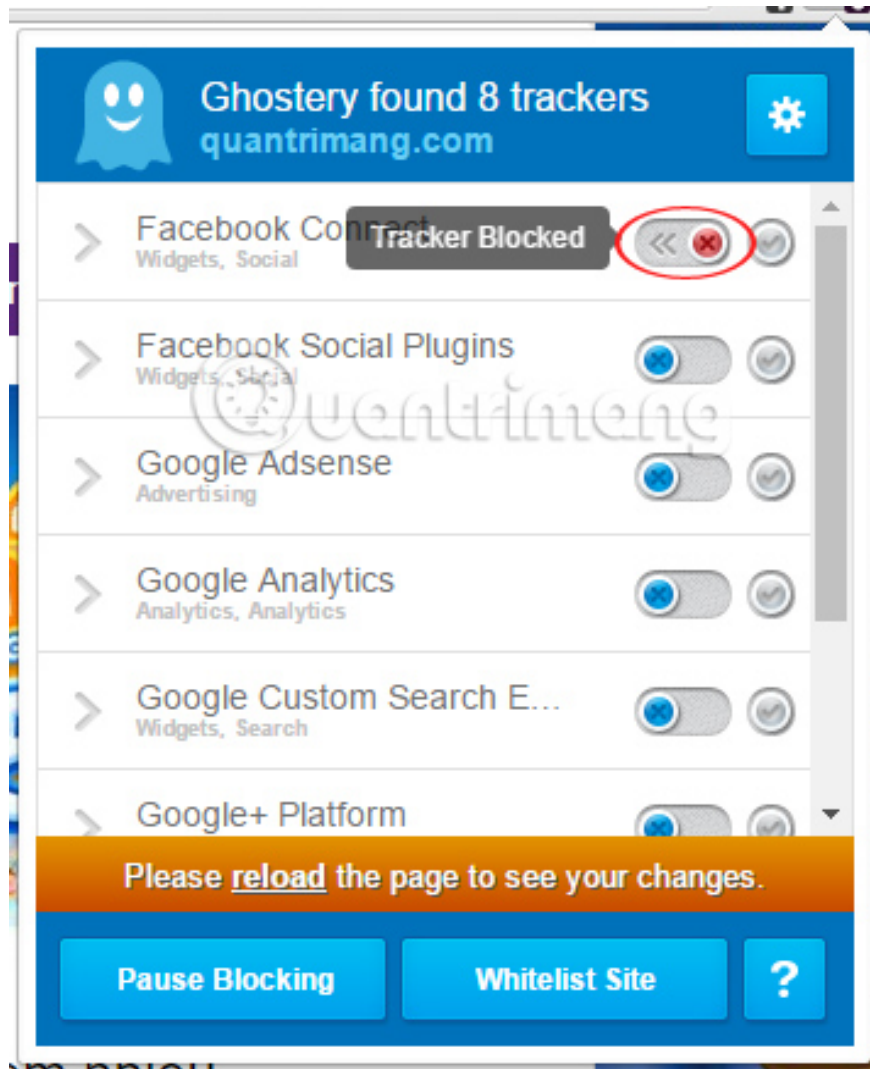

To see the details of what those services are, you will **click the icon** on the toolbar.

**The list of services** will be listed by the Ghostery utility so users can follow up.

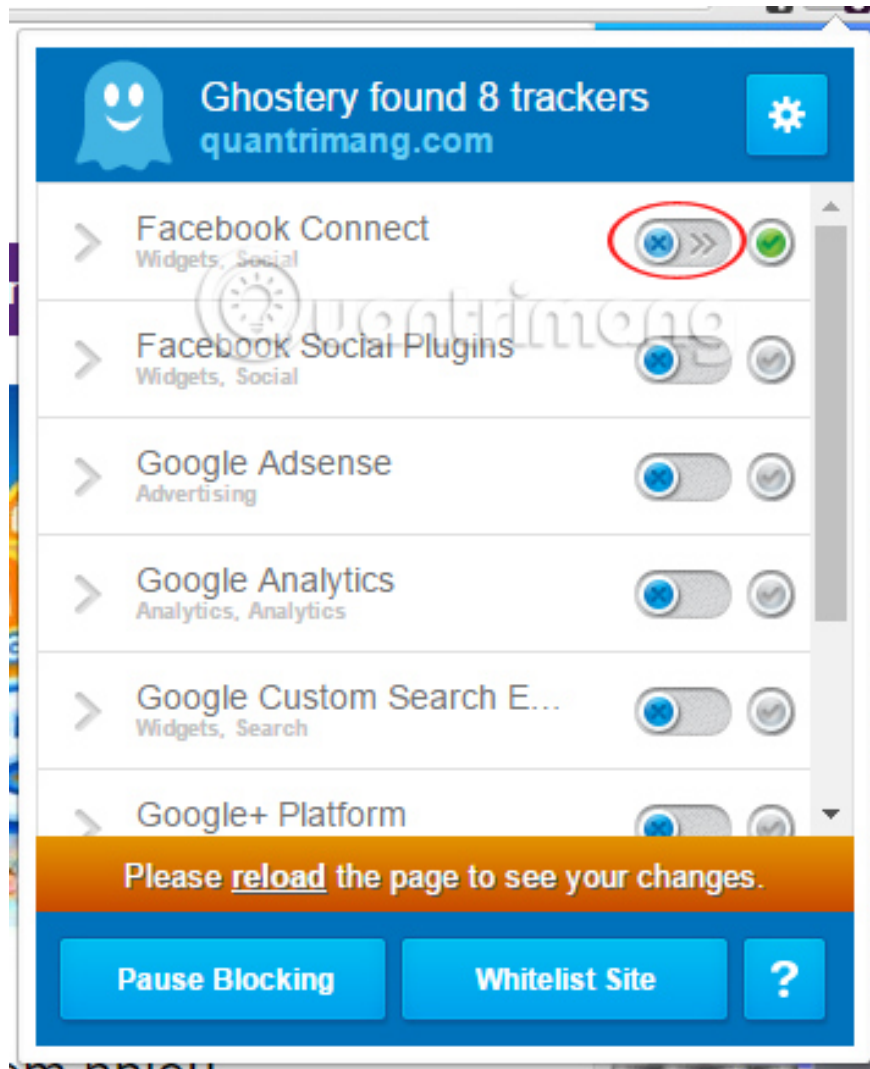

### Step 5:

To **disable** certain **service tracker** , you just need to **push the horizontal bar to the right** of that service to stop it. For example, with Facebook Connect. You will see that the **Tracked Blocked** message has been blocked.

You then **reload the site** and you will see a change in the sharing section on Facebook. The sharing icon on Facebook has been blocked and has the Ghostery icon included.

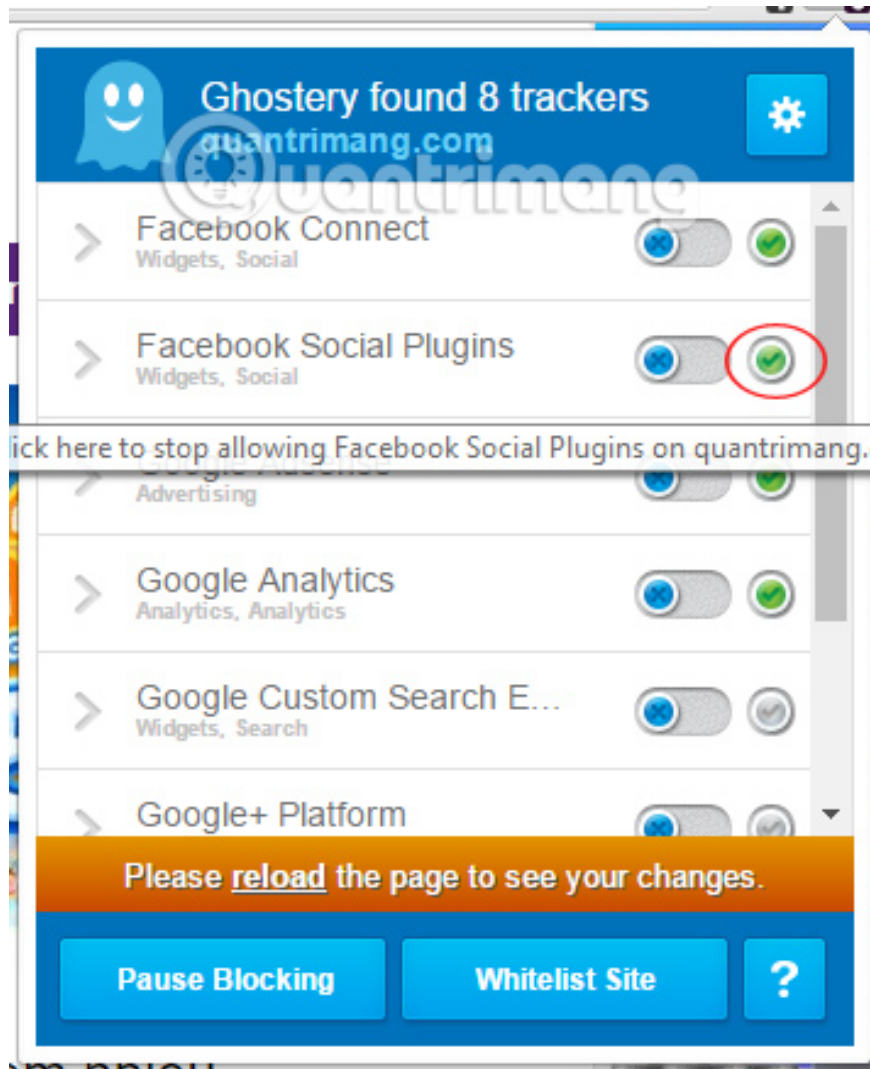

To **cancel blocking** , you just need to **push the horizontal bar on that item to the left** to return to the same way.

## Step 6:

In addition, the utility has many other options:

1. **Pause Blocking** : stop blocking tracking services on the page again.
2. **Outside circle of each service** : always allow this service to follow on the website.
3. **Whitelist Site** : allows tracking services all on this site without being affected by Ghostery utility.

So we showed you how to complete the steps to use the Ghostery utility to prevent tracking services, as well as adjust which services are allowed or not allowed to follow.
