

How to use Image+ to create images with AI technology

The Image+ website supports you to design images using AI technology as much as you can when creating images on Bing Image Creator.

When designing images on Bing Image Creator, you can customize them as you like, such as adjusting the size, downloading images, embedding them on a website, or sharing images. The following article will guide you to use Image+ to create images online.

Instructions for using Image+ to create images

Step 1:

First we access the link below to go to Image+'s website. At this interface, you **enter descriptive words for the image you want to create** .

<https://image.plus/>

Step 2:

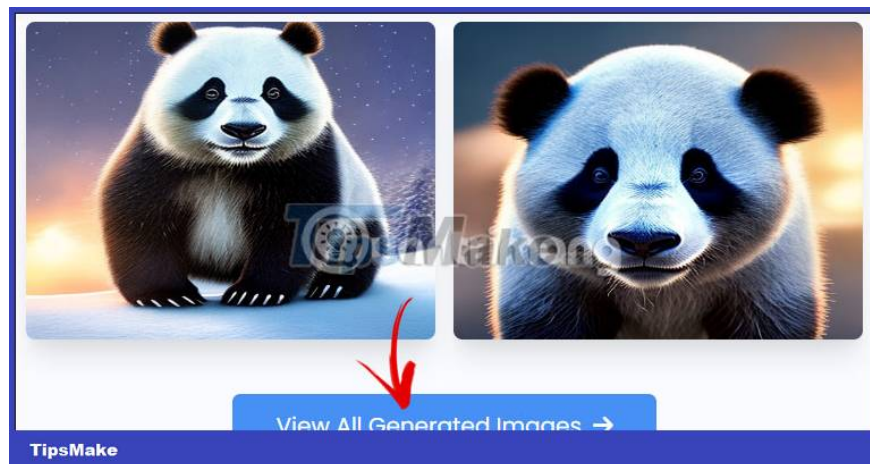

Then we **click Options** to proceed with setting options for the image. Now show different options for us to set up for the image.

First at Model you choose the image design style, Samples you choose the number of photos created (maximum is 2). Image Size to select the image size. After setting up, **click the Generate button** to create an image on Image+.

Step 3:

You will now see the image created in the style that we have selected. You can click View All Generated Images to see more images created by other users.

Step 4:

At the image you want to download on Image+, we hover over the image and then **click View Image** to view the image in the sharing page.

Next, at this interface you will see options to download photos, share on social networks, get the embed code, see the number of views and download.
