

How to use ImageToVideo to convert images into videos

One of the best ways to share or view photos is to turn them into video slideshows and this can easily be done with ImageToVideo.

One of the best ways to share or view photos is to turn them into video slideshows and this can easily be done with **ImageToVideo**.

ImageToVideo is a simple online converter that turns any image into a video. ImageToVideo is completely free, works in all browsers and does not need to be registered to use the service.

ImageToVideo.com allows processing up to 30 photos. Users can also add their own favorite music. Here's how to use **ImageToVideo** to **quickly** convert images into videos.

How to convert images into videos using ImageToVideo

ImageToVideo makes it easy to turn a set of images into video slideshows.

1. Click **Upload Your Images** then select the image.
2. Next, you will see thumbnails of the selected photos. Click and drag to rearrange them or press the red **X** to delete any photos you don't want to appear again. Click **Next (>>)** to continue.
3. Now select some tracks as background. **MP3** format is supported.
4. Add some text or logo. Select **Logo** to stamp the video. Use the **Options Logo** to set the position and size of the logo.

5. Select **Text** to add a caption to each image in the video. Add text content and adjust with different options. Click the + icon to add text to the next image.

6. Finally, click **Create the Video Now** . Photos and music will now be uploaded and this process takes a few minutes to complete.

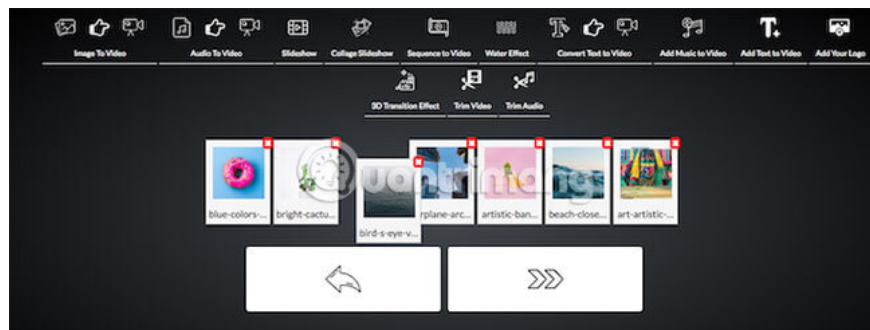

7. You can now download videos in **MP4** format or watch online.

ImageToVideo can produce really great results and is suitable for different purposes. Here is an example to help you visualize better:

The process of converting images into videos is simple and fast, but you only have limited control over the final product, just as with other online converters that you may be familiar with, for example. like **Kapwing** or **Online-Convert.com**. These software are of good quality and most features are similar to **ImageToVideo**.

If you prefer a more realistic approach, please refer to the article: Instructions for creating animated GIF images in Adobe Photoshop.

Other notable features of ImageToVideo

ImageToVideo provides some additional features. These features allow users to add effects to videos created or even edit existing videos. Options include:

1. Create a video collage (video collage) and can choose two different backgrounds.
2. Add water effects to photos in videos.
3. Create a video from the text.
4. Add music or text to existing videos.
5. Add watermark to existing video.
6. Cut a video or audio file.

If you need more control over how to edit videos, please refer to the article: Top website for online video editing, online video making.

Turn images into videos on Android and iOS

As can be seen, it is easy to use this online converter. But if you use the phone, you will find it easier to use an application to do the job.

You can use **Google Photos** to convert images into videos on both Android and iOS. Google Photos does this through the **Animations** option . This is one of the things that **Google Photos Assistant** can do.

Google Photos is not the only option. Most of the best free video editors for iOS can turn photos into a slideshow. And there are many Android apps that create interesting movies from images for you to explore.

Hope you are succesful.
