

# How to use IMPORTXML in Google Sheets

IMPORTXML is a useful data manipulation function in Google Sheets. Here's how to use IMPORTXML to automate data entry in Google Sheets.

## What is IMPORTXML in Google Sheets?

The formula of the IMPORTXML function in Google Sheets is as follows:

```
=IMPORTXML(url, xpath_query)
```

The IMPORTXML function imports data from any of the different structured data types, including XML, HTML, CSV, TSV, RSS, and ATOM XML.

It pulls information from every XML field. You can use it to enter publicly available information on the Internet. Therefore, you are not allowed to use it with the web, which must be logged in to access.

## When to use IMPORTXML in Google Sheets?

1. Extract data from the web
2. When you need data on the page but can't activate Screaming Frog

## How to use IMPORTXML in Google Sheets

Before diving into the actual usage of IMPORTXML, you need to understand the arguments in the formula:

### URL

1. Is the URL of the website you want to import data from.
2. Include protocol (https:// or http://).
3. Must include the value of the URL in quotation marks or refer to a cell containing the appropriate text.

### XPath Query

A3    fx    =IMPORTXML(A2;"//div[@class='livescore-soccer-main-body']/table//tr")

	A	B	C	D	E	F	G	H	I	J
1	#REF!	#N/A								
2										
3	TT	CLB	ST	T	H	B	Tg	Th	HS	Đ
4	Bảng xếp hạng Group A									
5	1	Napoli	6	5	0	1	20	6	+14	15
6	2	Liverpool	6	5	0	1	17	6	+11	15
