

How to use IObit Uninstaller to completely remove software on Windows

IObit Uninstaller is a tool to completely uninstall software on the computer, removing all software files when uninstalling on the computer compared to the normal way of deleting software on Windows.

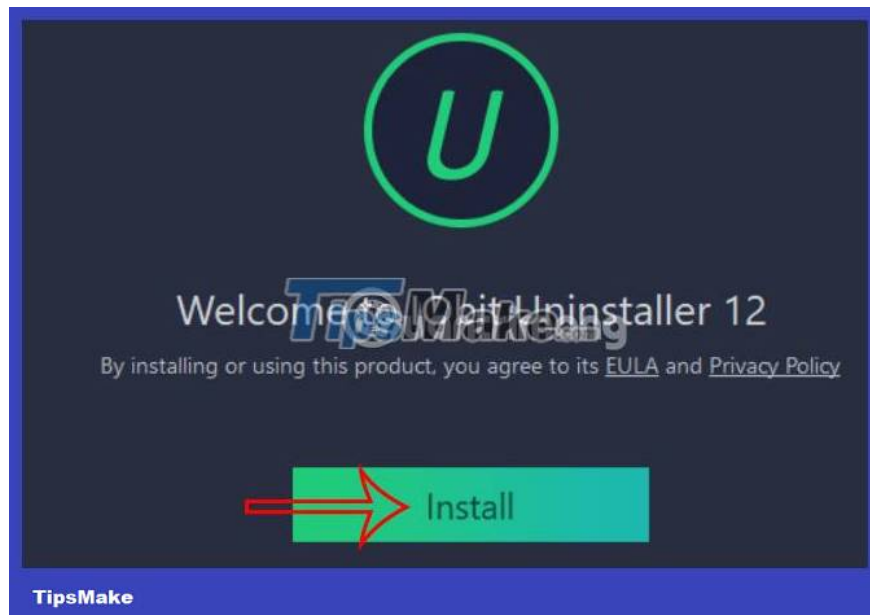

IObit Uninstaller's user interface is very simple and easy to use to remove software and plugins. The article below will guide you how to use IObit Uninstaller to completely remove software from your computer.

Instructions for using IObit Uninstaller to remove software

Step 1:

First of all, we install IObit Uninstaller software for the computer.

At the tool interface, **click the Install button** to proceed with the installation.

Step 2:

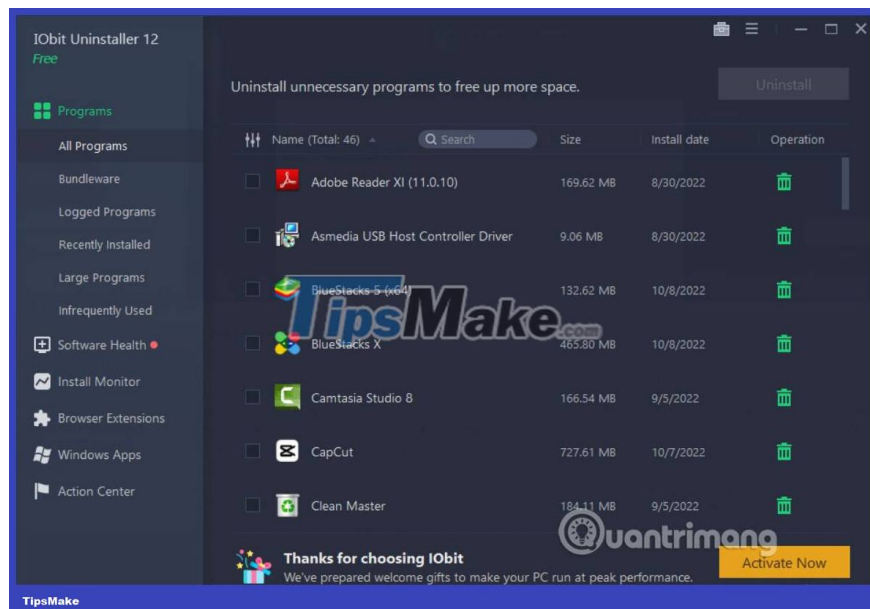

During the tool installation process, you will be suggested to install some other software. If you don't like it, click No, thanks then click Next to continue.

Step 3:

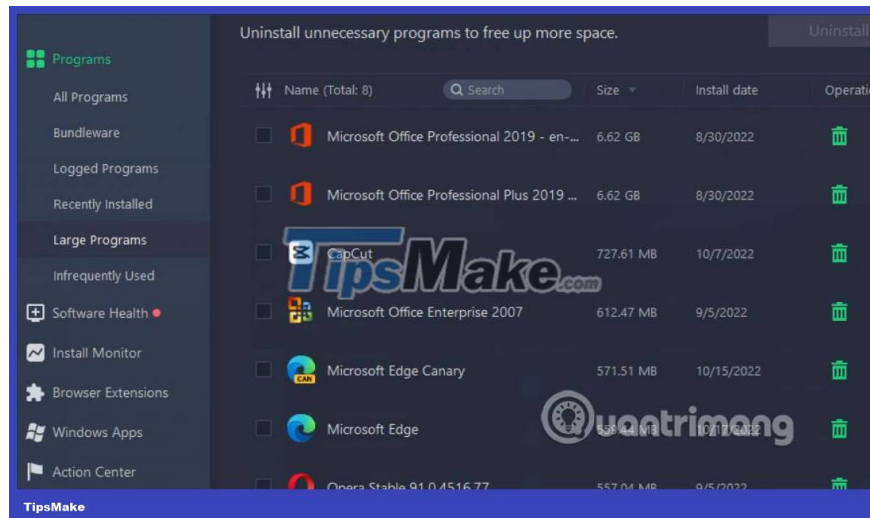

Then you wait for the IObit Uninstaller installation process to complete on your computer. Displays the main interface of IObit Uninstaller software. Here you will see an interface with a list of software currently installed on your computer.

Each software will have basic information including capacity and installation date on the software.

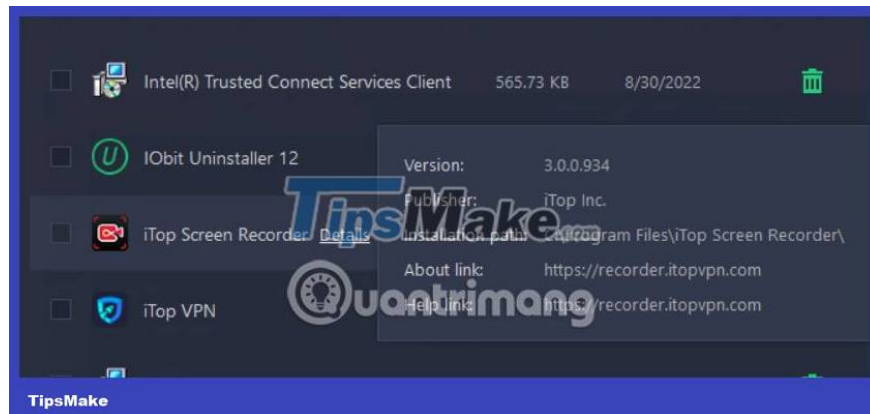

Step 4:

In addition, you can also **manage the software installed on your computer**, filter computers with large capacity, for example, using **the menu bar on the left** of the interface.

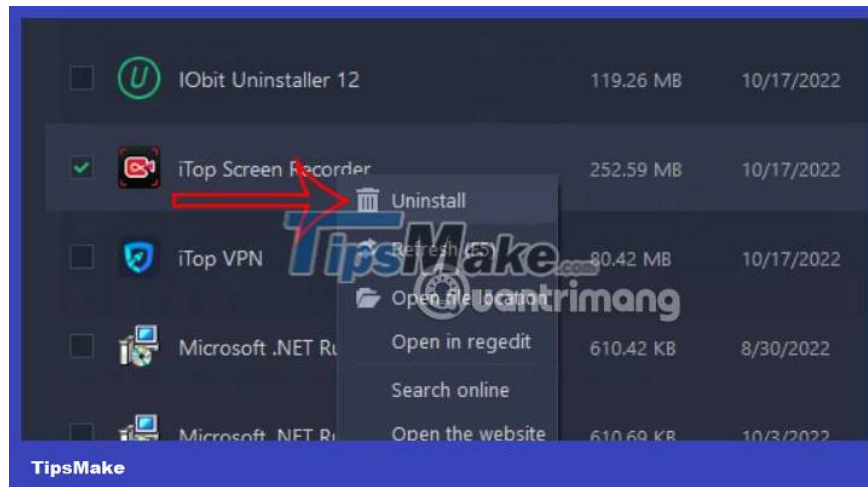

Step 5:

At each installed software, when you hover and **click Details**, you will see detailed information and software installation location.

To **delete the software**, right-click and **select Uninstall** or click the trash can icon. Click on the Uninstall button to remove the software.

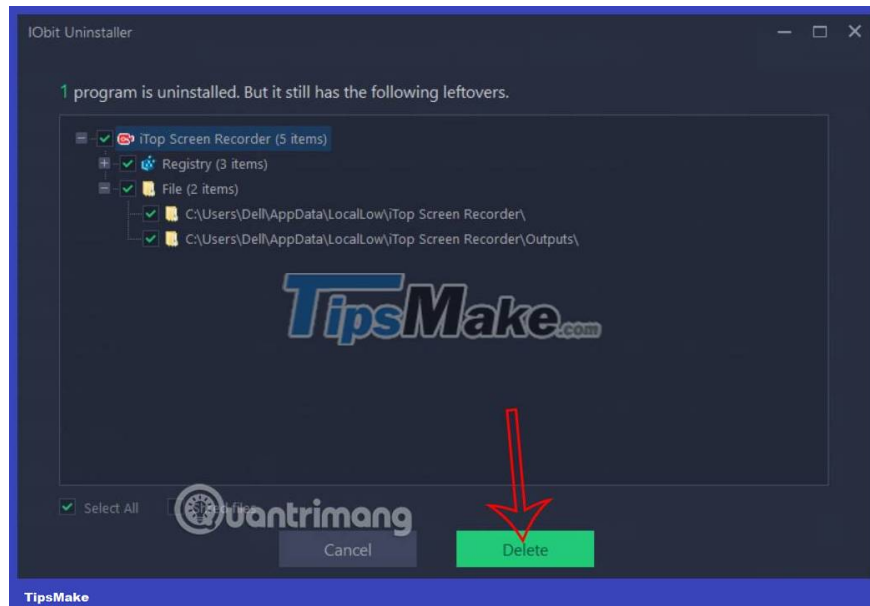

Step 6:

The process of uninstalling the software using IObit Uninstaller will take place a day later.

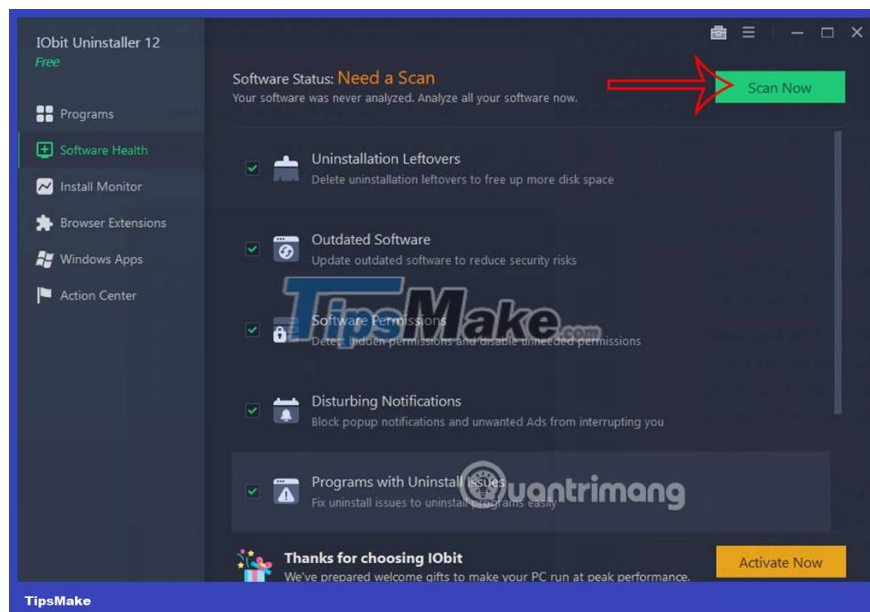

During the uninstallation process, IObit Uninstaller will display redundant files of the software we are uninstalling. Click Delete to agree to completely delete. We continue to perform this operation with other software.

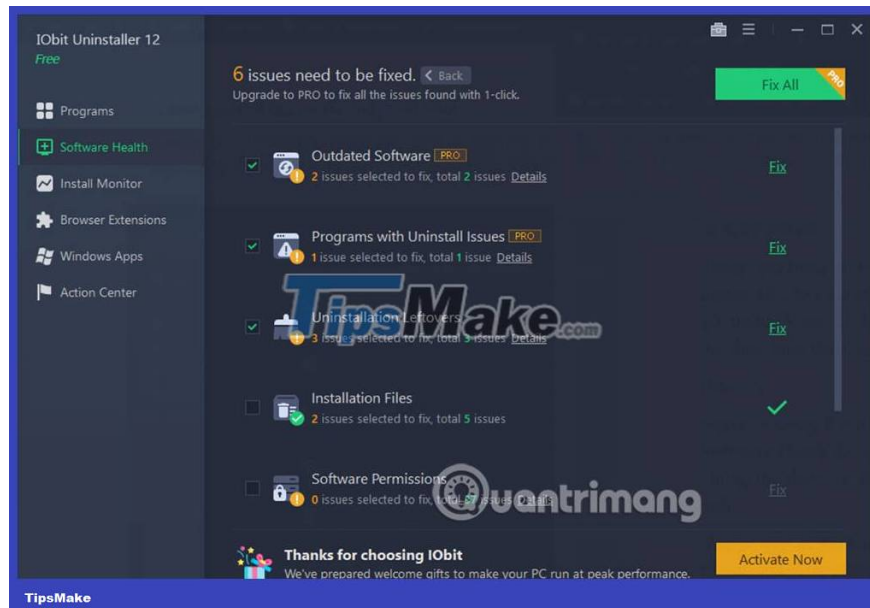

Step 7:

In addition, IObit Uninstaller also has a **Software Health** feature to scan junk files that you cannot see. From there you can delete them from your computer.

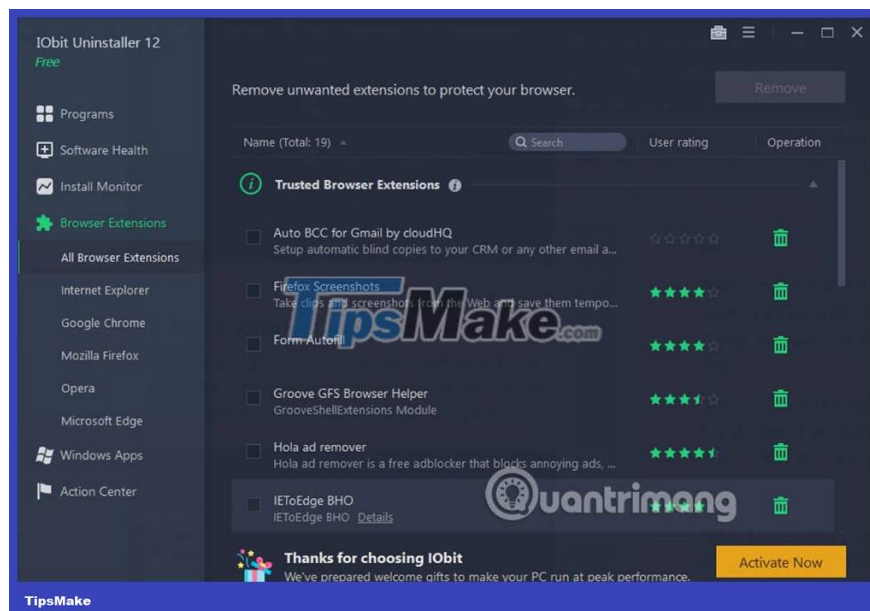

If there is a problem, you will receive a notification and click Fix to fix it. However, there will be some errors that are only implemented in the Pro version.

Step 8:

IObit Uninstaller also has a **Browser Extensions** option to manage and remove installed browser extensions.
