

How to use iOS's anonymous search feature on Google Search

Recently Google has just released an update for its search application on iOS. Now Google Search users can search anonymously and watch Youtube directly on this app.

Recently Google has just released an update for its search application on iOS. Now Google Search users can search anonymously and watch Youtube directly on this app.

Anonymous search is a feature that helps users to "hide" information such as **browsing history, passwords, search information** , . After turning off the browser, everything will be 'cleaned up'. completely and without leaving any trace, and nobody knows what you did during that time.

Although the anonymous search feature is built into both Chrome and Safari browsers, however, on a new update Google establishes this feature more securely and securely.

In addition, Google also allows users to "lock" **private search with Touch ID** , and when someone borrows your phone or tablet to use, they will not be able to see private tabs still Also open inside the application.

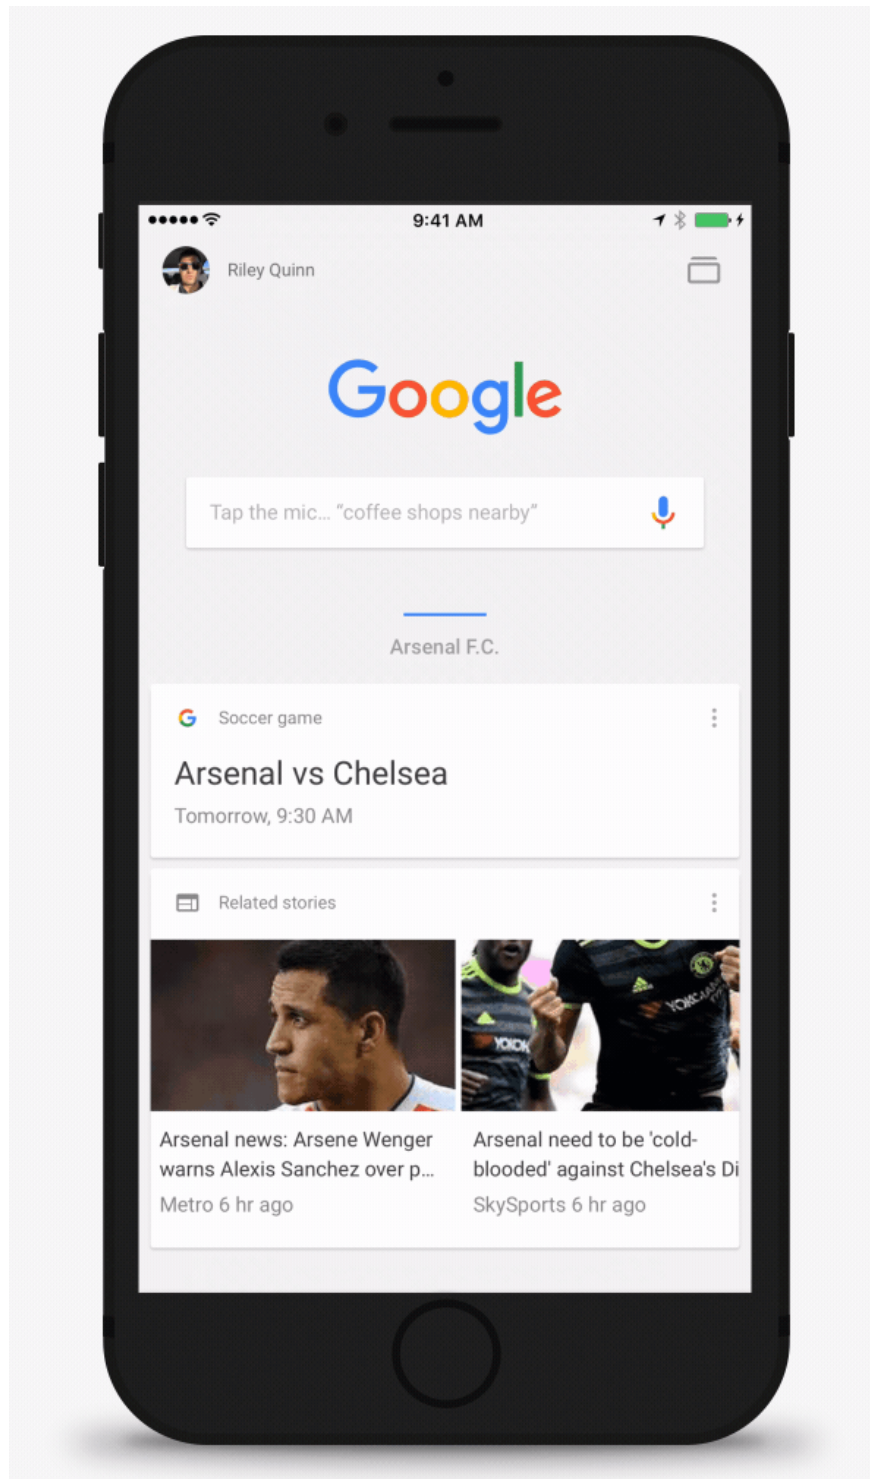

Download the latest Google Search app for iOS here.

Enable anonymous search on iOS:

To activate and use an anonymous search feature on iOS, follow the steps below:

First open the **Google Search** app => **Setting** => **Turn on Iognito** .

Alternatively, you can use the **3D Touch feature on the Google Search icon** .
