

# How to use Launchpad on macOS Sierra

Launchpad is the default tool on Mac used to manage all the applications we have installed on the device. Thanks to this tool, you can access the application more quickly and easily. So does the Launchpad usage on the macOS Sierra change?

With any operating system on a Mac, Launchpad is the default tool for managing all the applications that we have installed on the system. Users can quickly access applications much faster and simpler. However, will there be any changes to Launchpad if the operating system has upgraded to macOS Sierra? If you are new to macOS Sierra version and are not yet proficient in using Launchpad, you can refer to some of the tips below.

## 1. Enable Launchpad on macOS Sierra:

To be able to activate the Launchpad on macOS Sierra, we can do the following:

Click on **the Launchpad icon on the Dock** interface screen as shown below:

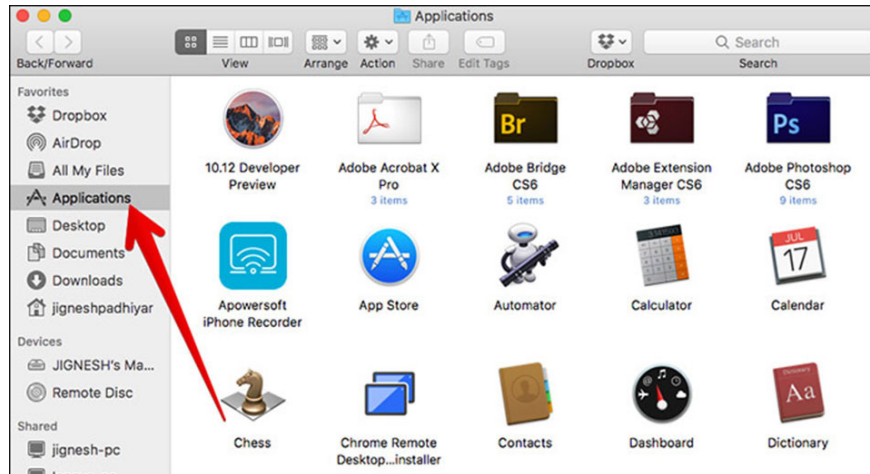

Use four fingers and pinch on **Trackpad** . The last way is to use the **key press Launchpad F4** on the keyboard.

Go to **Finder** then click on **Applications** . If you want to add any application to Launchpad, just drag the application to the Applications folder and you're done. And when you start Launchpad, you'll see the app appear in the list of installed applications.

## 5. Delete the application in Launchpad:

We also start Launchpad on the device. Next press and hold the application you want to delete in a few seconds when **the X icon** appears. Click it to delete the application.

In case of not seeing the X icon, we cannot delete the app because it is an application already installed from Apple.

## 6. Organize Apps into the folder in Launchpad:

We can put the application folders of a group of applications. This will help put applications with the same features in one category, from which to choose faster.

At the Launchpad interface, we **click and hold the application** we want to put in the folder. When a notification appears to adjust the application, **use Trackpad** to drag and drop the application to any folder you want to transfer.

These are some of the tips for using the Launchpad tool in macOS Sierra more effectively. Hopefully with the above article, users can exploit Launchpad features to serve their work.
