

How to use Locket Widget to share recently taken photos in a snap.

Locket Widget is an iPhone app that makes sharing photos quick and easy, eliminating the need for multiple steps.

Locket Widget is an iPhone app that makes sharing photos quick and easy, eliminating the need for complicated steps. You no longer need to send photos via Messenger, Zalo, or other apps where image quality might be compromised. With Locket Widget, photos are transferred directly to the other person's phone, maintaining their original quality. So, besides transferring files via AirDrop , this article will show you another way to share photos using Locket Widget.

Instructions on sharing photos using Locket Widget

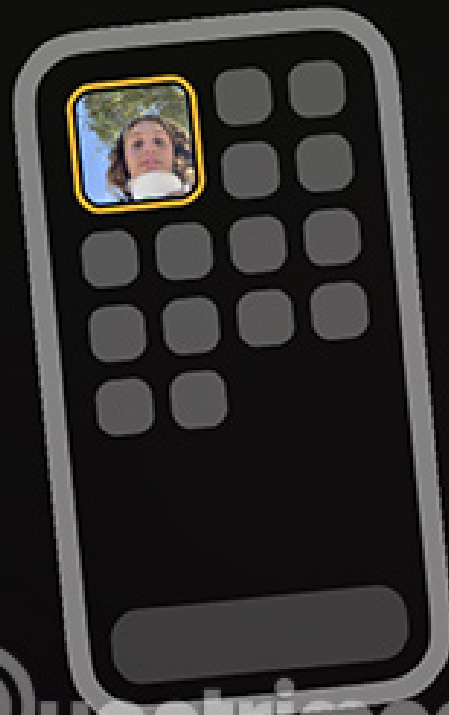

Step 1:

Download the Locket Widget app for iPhone using the link below. Note that both the sender's and recipient's devices must have the Locket Widget app installed.

1. Download the Locket Widget iOS app.

Step 2:

On the app interface, users first need to tap on "**Set up my Locket**". Next, you need to **enter your phone number** to register and send images from the app.

1	2 ABC	3 DEF
4 GHI	5 JKL	6 MNO
7 PQRS	8 TUV	9 WXYZ
	0	⌫

Step 3:

Next, users need to allow the application to access their phone's contacts in order to send images; tap **Enable Contacts** .

Users will immediately see their friends' contact lists displayed. At this point, you can **press Add** to send a message inviting them to join your Locket Widget app list.

Step 5:

You will **tap Add widget** to immediately use the Locket Widget on your screen.

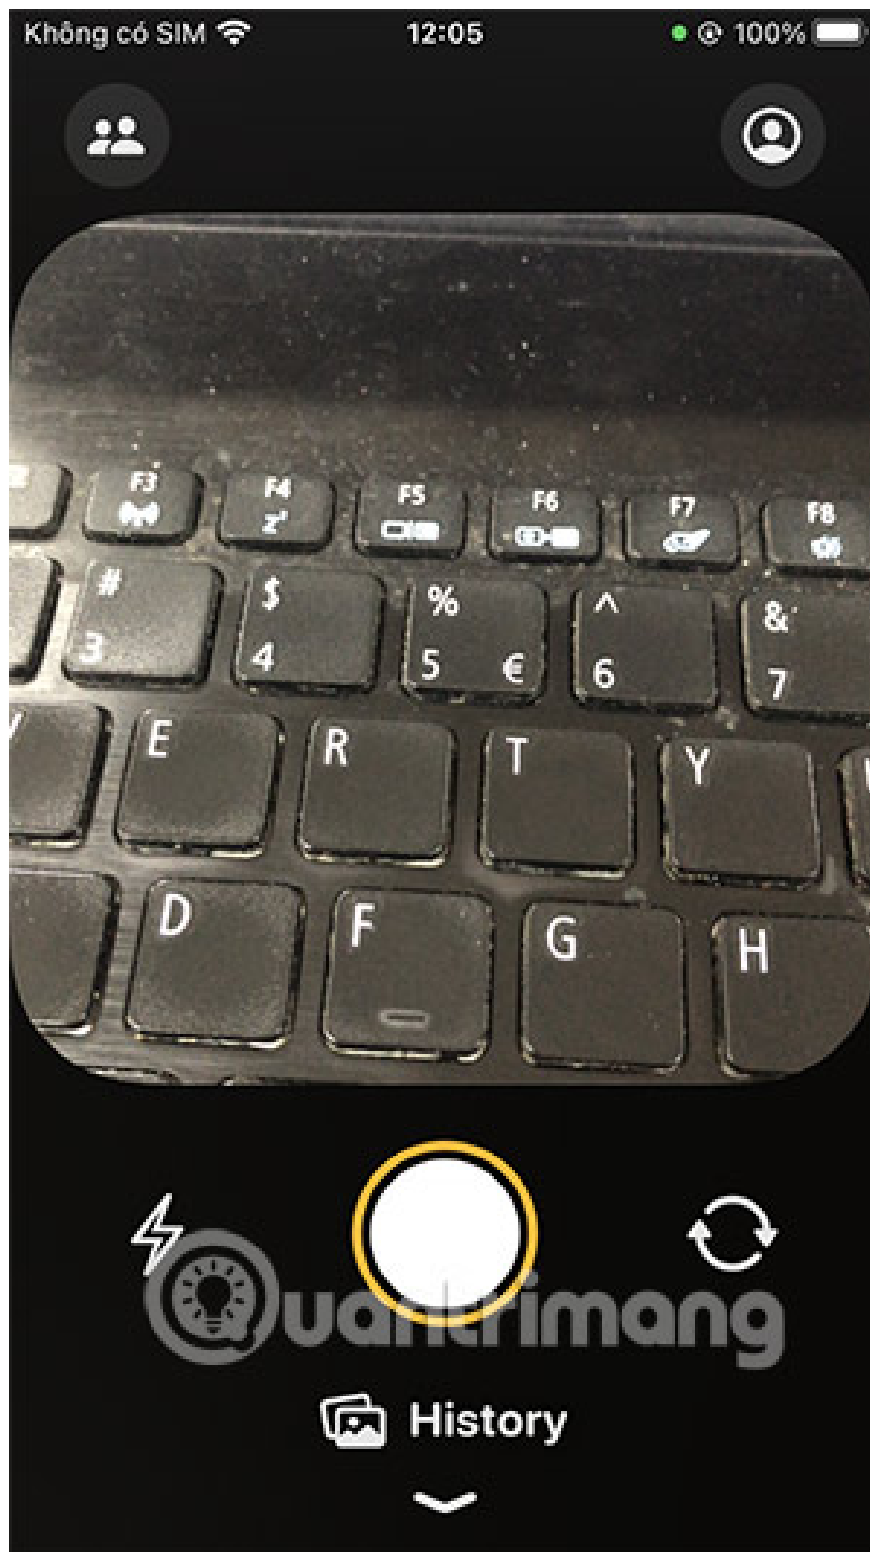

Step 6:

Return to the main screen on your iPhone. **Tap the Locket Widget to take a photo immediately** . Then **tap Finish** to complete the setup process and display the photo capture interface.

Now **press the white circular button to take a photo** , then select the person you want to send the photo to, and you're done. Once the recipient has the Locket Widget installed, they will immediately receive the image you sent.
