

How to use multiple chat applications on the same window

Have you ever tried to use and chat 14 social networks at the same time on the same program, without having to switch too many tabs? It may not sound feasible but it is completely true ...

The number of people using social networks like Viber, Facebook Messenger, Skype, . is increasing. Not only is it used to exchange and make friends, but many people also use chat services to become a means of daily exchange. Besides, the continuous upgrade of features in chat applications also attracts users.

1. Instructions to block messages when spammed on Viber
2. Hide nick Facebook Messenger on Android
3. Guide to chat with lots of Skype nick on the same computer

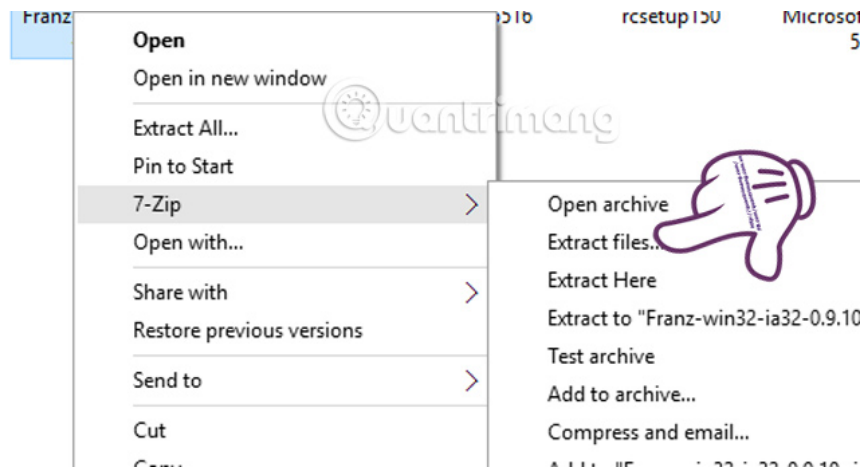

Most chat services today have a computer version, which is used on the Web platform. And it's not uncommon to close or open these chat service tabs, if we use it at the same time. So did you try to gather all chat services into the same software and use them? The Franz and All-in-One Messenger tools will help us do that when we can online, manage and chat 14 social networking services at the same time. Join the Network Administrator to learn the unique features of these two tools in the tutorial below.

1. Using Franz software:

Step 1:

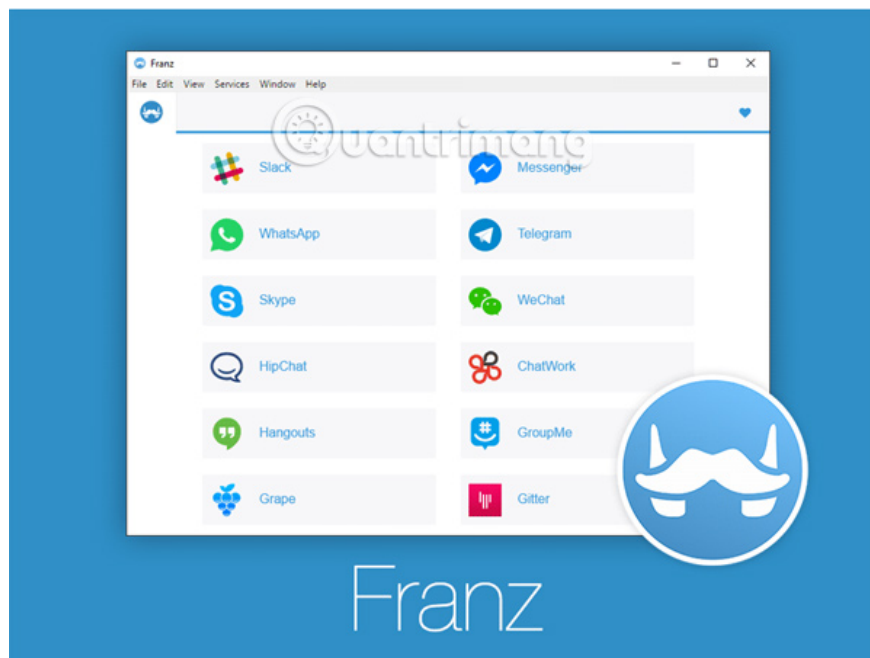

You need to download Franz software under the link below, then **extract the .zip file** of the program.

1. Download Franz software for free
2. Download Franz for Mac

Step 2:

After decompressing, you proceed to install the program. Franz will proceed automatically on the computer, but we do not need to press any more operations. In particular, the program has no viruses or ads, safe for computers.

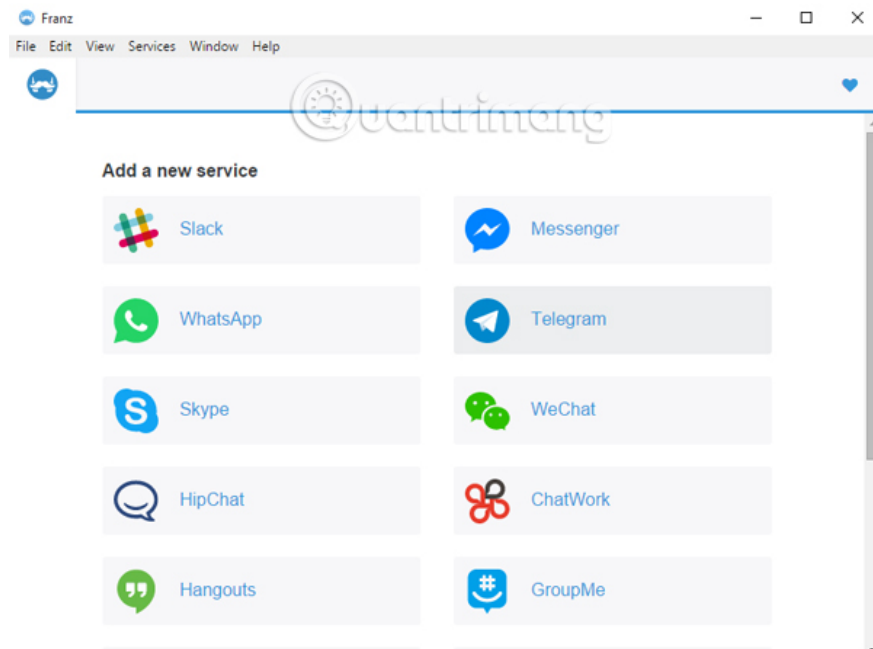

After installation, the icon of Franz will appear right on the computer screen and in the taskbar.

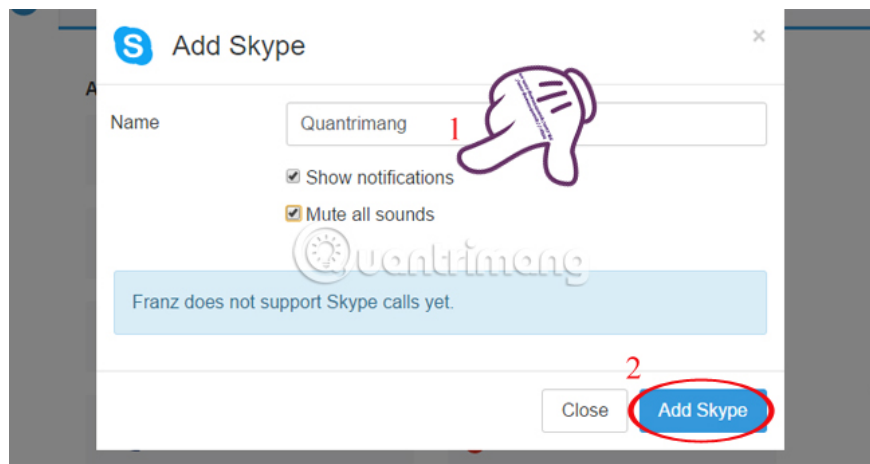

Step 3:

The main interface of the program appears with full **14 social networking services** such as Facebook Messenger, WhatsApp, Hangouts, Skype, Slack, Steam Chat, . You can use social chat services right away.

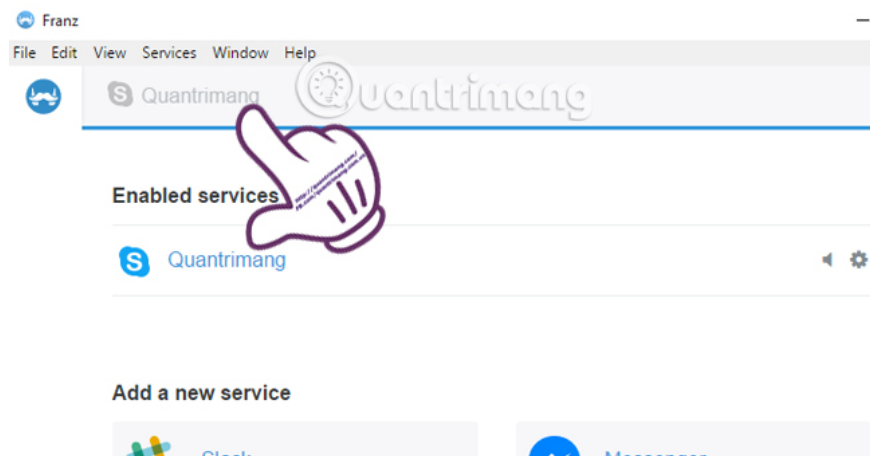

Step 4:

When you click on any chat service, **the settings panel** will appear first. For example, with the Skype service in the picture below. We can set the name for the account, notification options and audio. Finally click **Add Skype** to save.

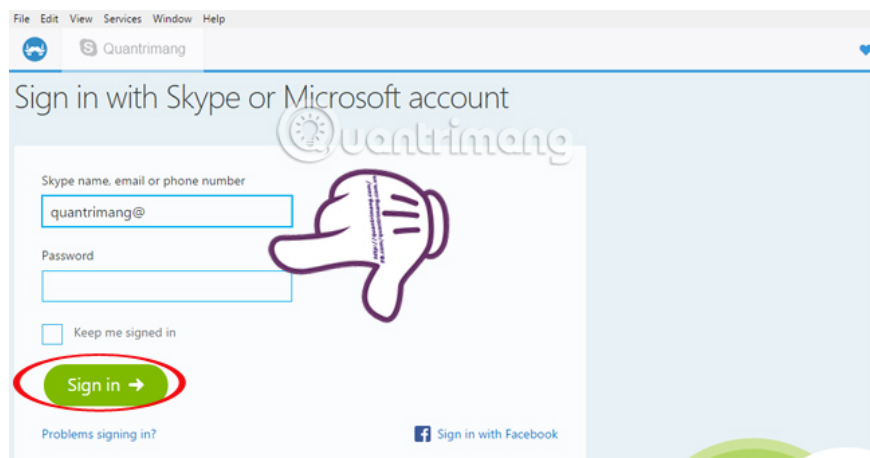

Step 5:

To use, click on the name Skype just placed on the top of the screen, next to the icon Franz.

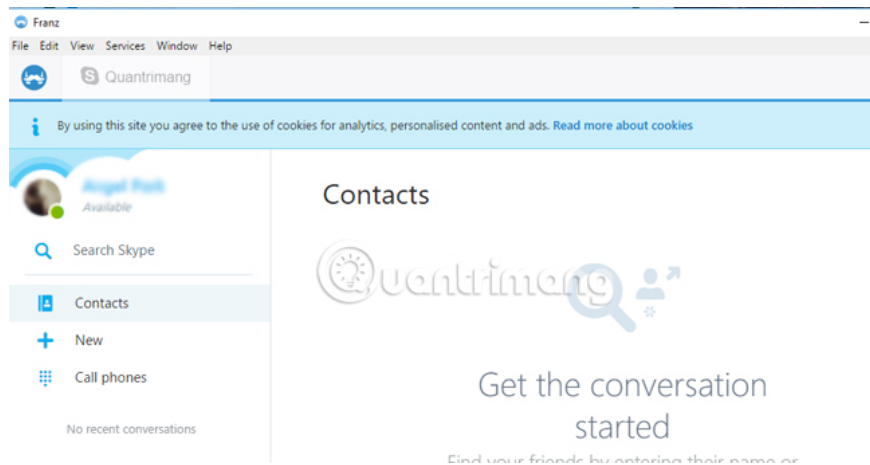

Soon Skpye's interface will appear. Log in to your personal account and click **Sign in** to chat with your friends.

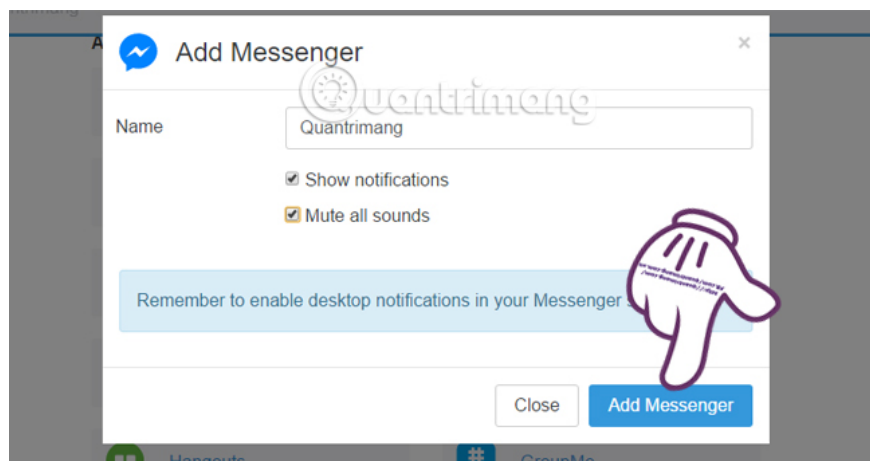

Step 6:

The interface is quite similar to when you use it on the computer version, right? We can still chat and text with friends as usual.

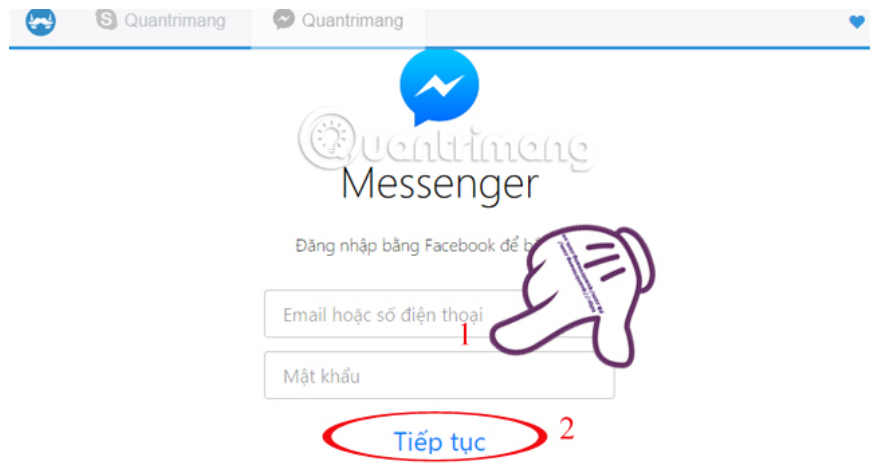

Step 7:

To use another chat service, click on the top Franz icon to return to the main interface. You can choose other chat apps such as Facebook Messenger. We also set up the same and click **Add Messenger** to save.

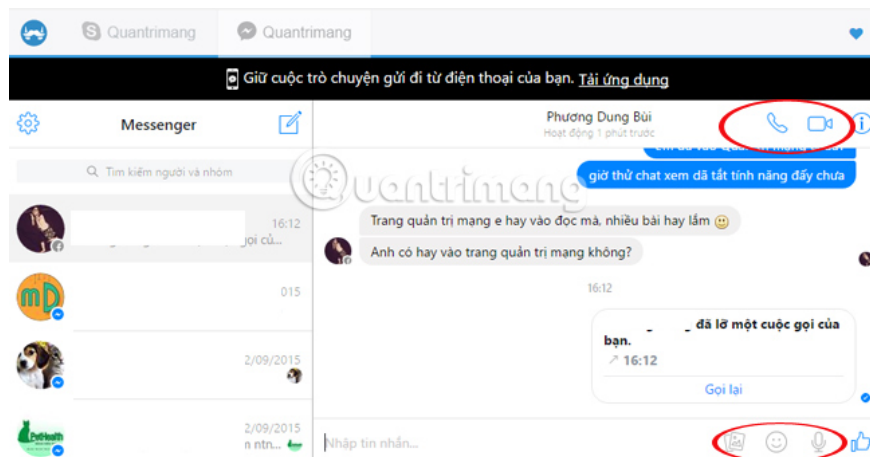

Step 8:

Click on the name Messenger and place it on the screen to log in to your personal account. Click **Continue** .

Step 9:

The main interface of Messenger appears. You will see all the support features like when using Messenger on the web platform. Can also chat, send photos, even make calls with anyone.

2. Use the All-in-One Messenger utility:

Just like Franz software, this utility will allow users to use chat tools on a single window. We will not need to open or close chat applications as before. In particular, All-in-One Messenger is a utility installed on Google Chrome, easy to use.

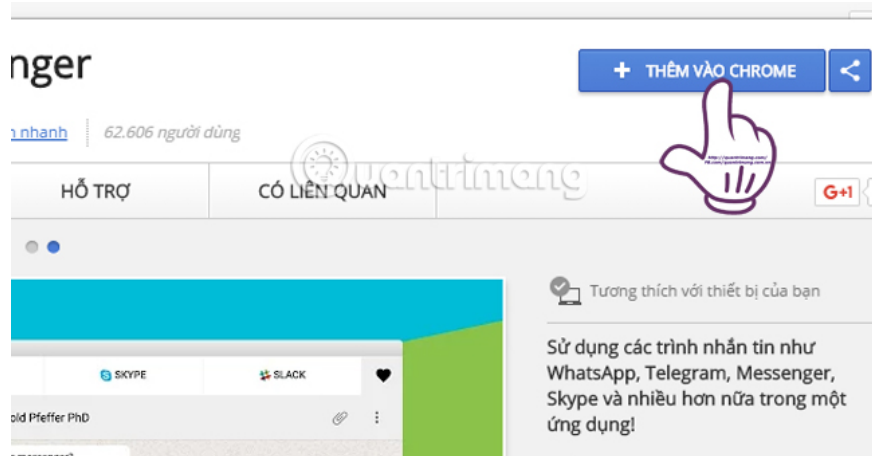

Step 1:

First, please visit the link below to proceed to install the add-on browser:

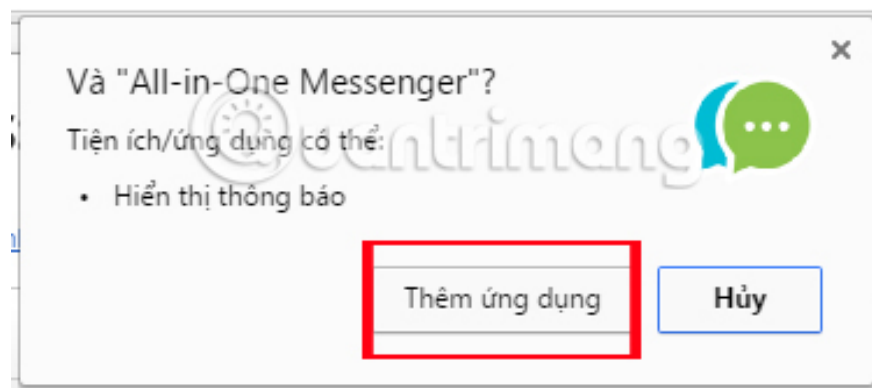

1. Download the All-in-One Messenger utility

Step 2:

Click **Add to Chrome** to install.

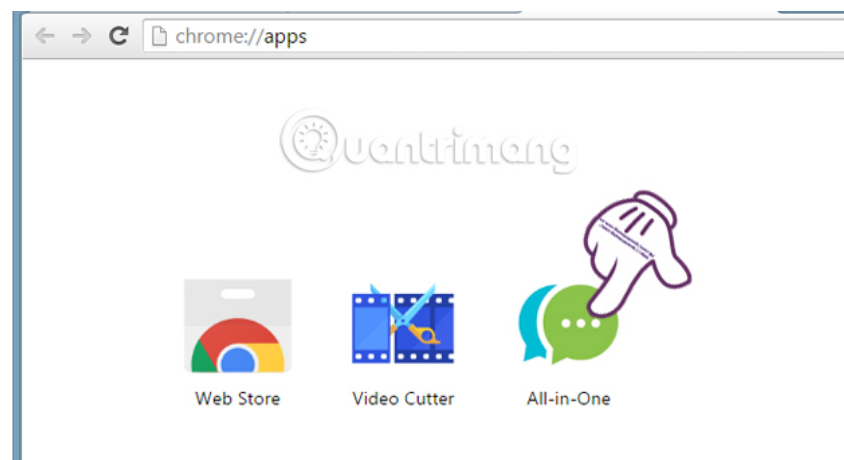

Then click on **Add application** to be able to use All-in-One Messenger.

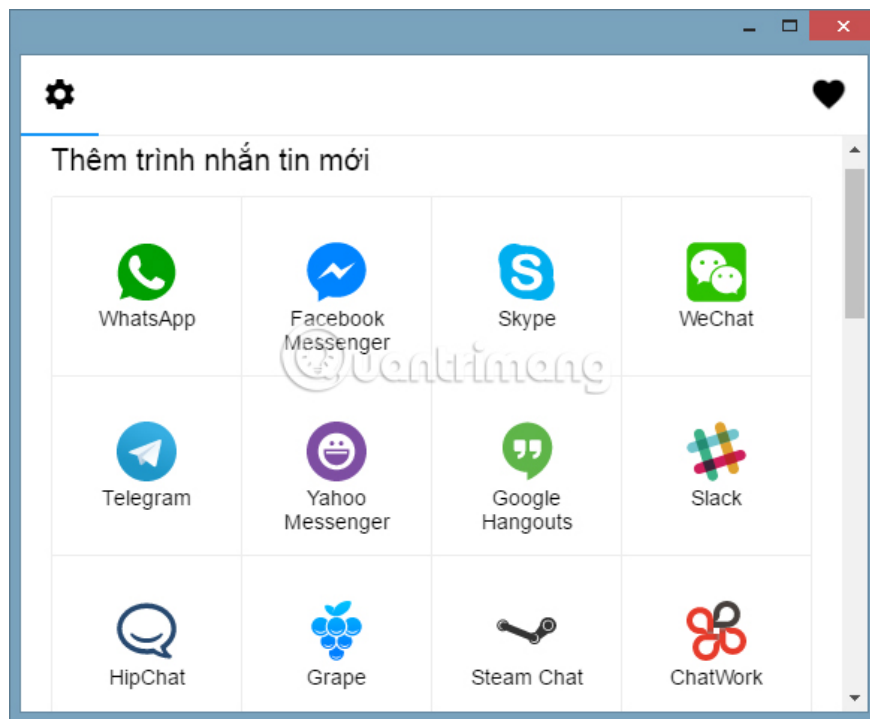

Step 3:

Soon, we will be transferred to the interface of applications running on Chrome browser. You click on **All-in-One Messenger** to run the application.

Step 4:

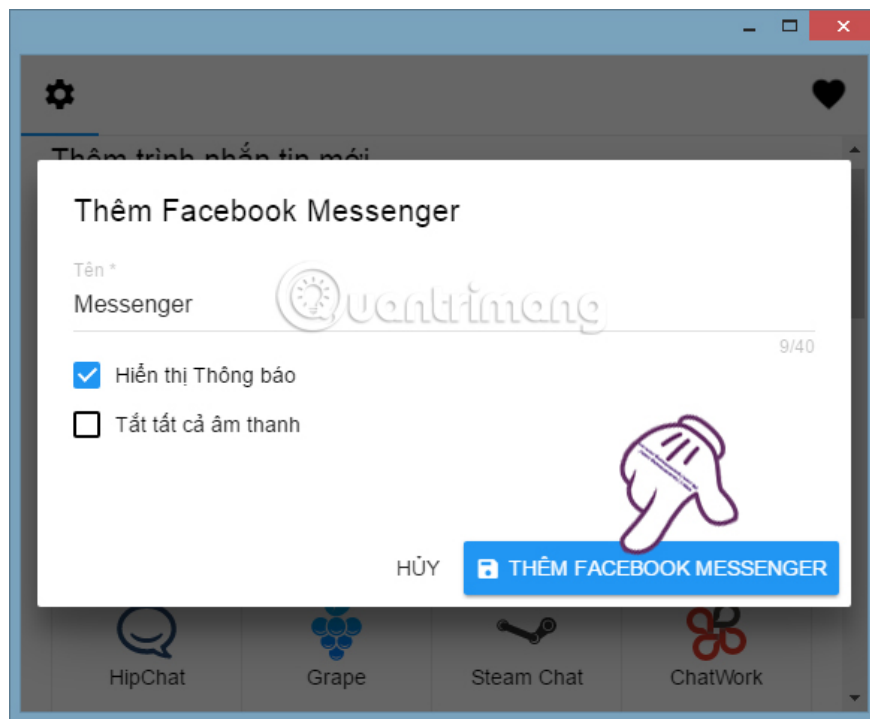

Appearance of separate window interface of All-in-One Messenger. You will see All-in-One Messenger brings together a lot of popular chat apps, like WhatsApp, Facebook Messenger, Skype, Telegram, Google Hangouts, .

Step 5:

We can choose to use any chat application, such as **Facebook Messenger** . Shortly after that, the window of managing the Facebook Messenger application appeared.

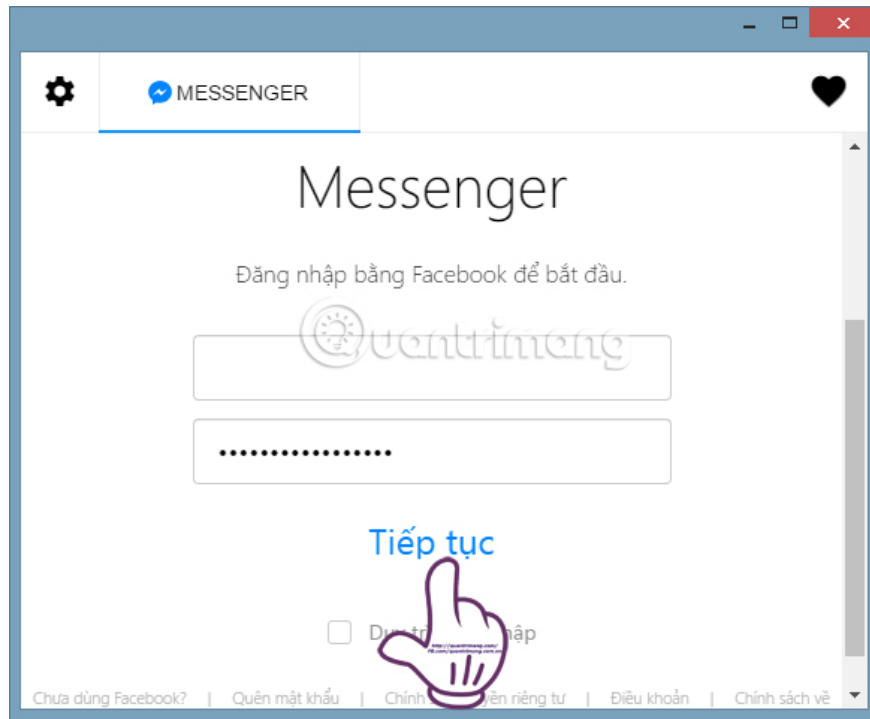

You can choose to enable or disable the sound when ticking in the Turn off all sounds box. Then click **Add Facebook Messenger** .

If a message board appears as shown below, the user can choose **Process** or **Leave later** . If pressing Process will appear a message to allow the use of a microphone or camera. Click **Allow** .

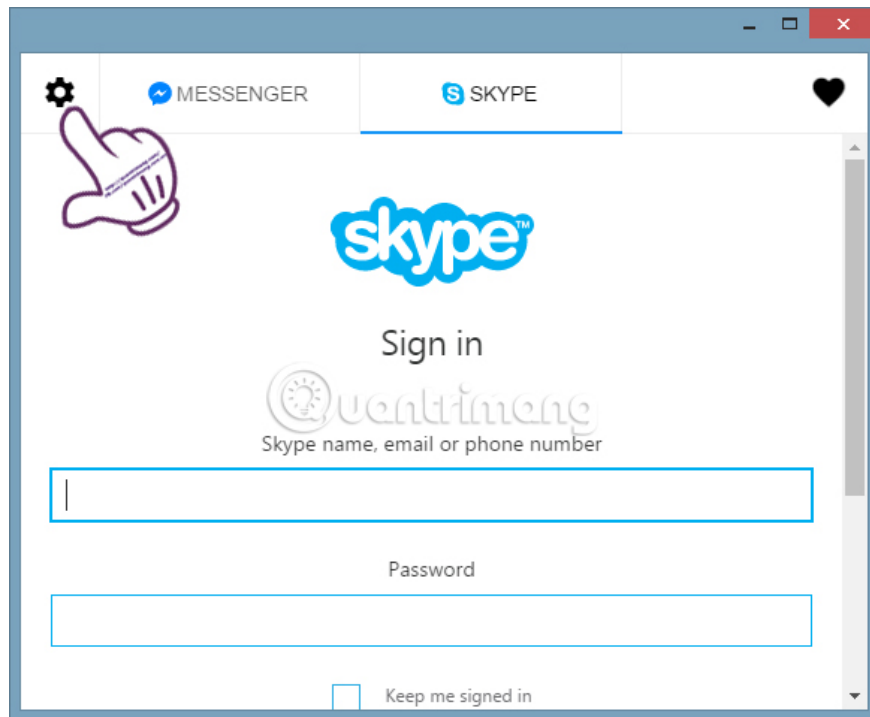

Then we just need to log in to Facebook Messenger account and use it to finish.

Step 6:

To use another chat application, click the **alias icon** to bring it to the main interface, and select the chat application, for example **Skype** .

Step 7:

To **delete the chat application** that you do not want to use, return to the main interface, click on the chat application and select **Delete** as done.

Above are two tools to help users use chat applications on a program, including Franz and All-in-One Messenger. We can use chat apps at the same time, avoiding the case of skipping chat messages or notifications from friends. Besides, users can switch between applications easily with just a simple click.
