

How to use Net Writer to blog on Windows 10

Net Writer application supports users to blog right on the application without direct access.

If you are a blog writer, you should not ignore the Net Writer application on Windows 10. Net Writer application links and supports many popular blogs WordPress, Movable Type, Livejournal, Typepad, Google Blogger. You just need to select the type of blog you are using and then log in to your blog account as usual. Thus, the application saves you the operation of logging blog pages on multiple browser tabs, instead of accessing it right in the browser interface. The following article will guide you how to use the Net Writer application on Windows 10.

4. Ways to change website domain names on WordPress

Instructions for using Net Writer blog

Step 1:

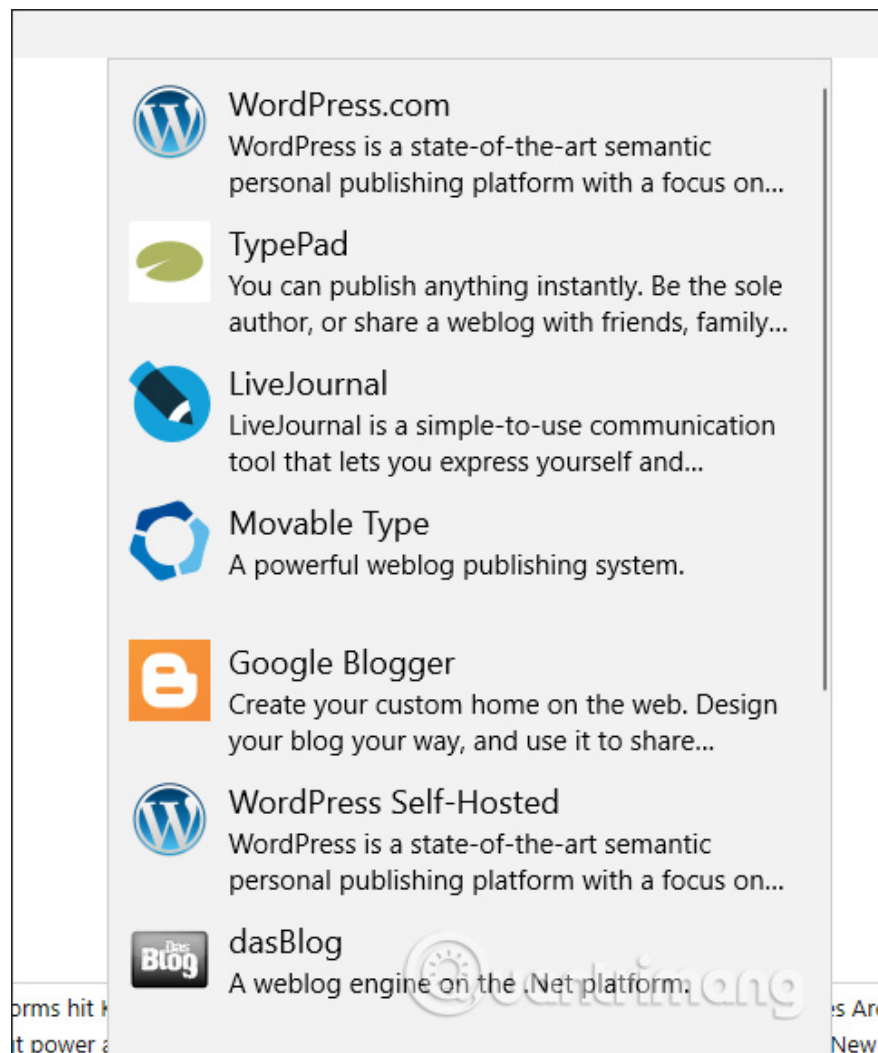

We install the Net Writer application on Windows 10 according to the link below.

1. Download Windows 10 Net Writer application

Step 2:

Displaying the interface of the application, we select the type of blog you want to use by clicking on **the Select your blog provider line** . Then display the list of blogs that the application supports.

Continue to enter the information of the blog site you choose. We enter the blog site address at Enter your homepage URL, click the Detect button to get the API and display at the Blog API URL, enter the account name and the blog password. Finally, click **Add blog** .

Enter your homepage URL

Select your blog provider

 **WordPress.com**
WordPress is a state-of-the-art semantic personal publishing platform with a focus on..

Blog API URL

Username

Password

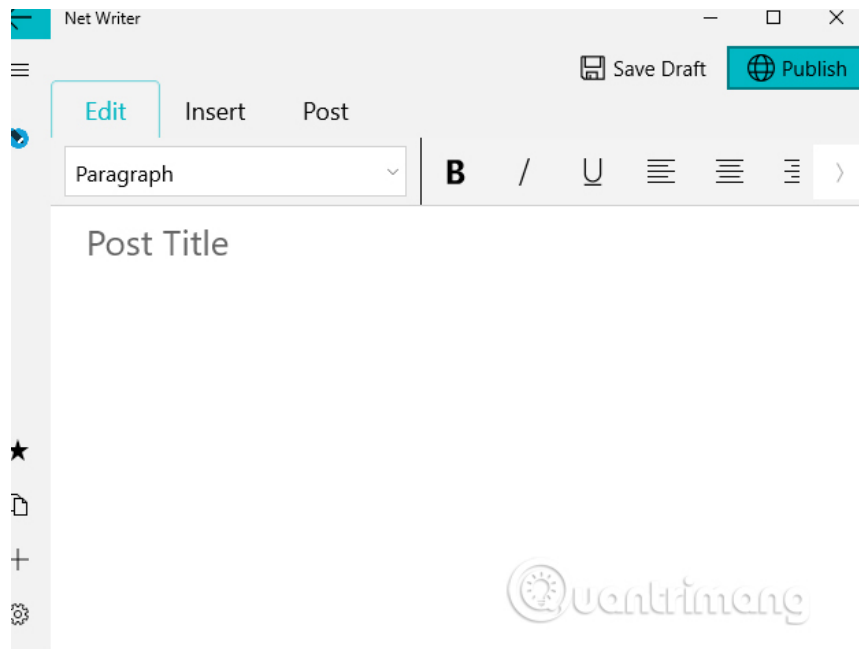

Step 3:

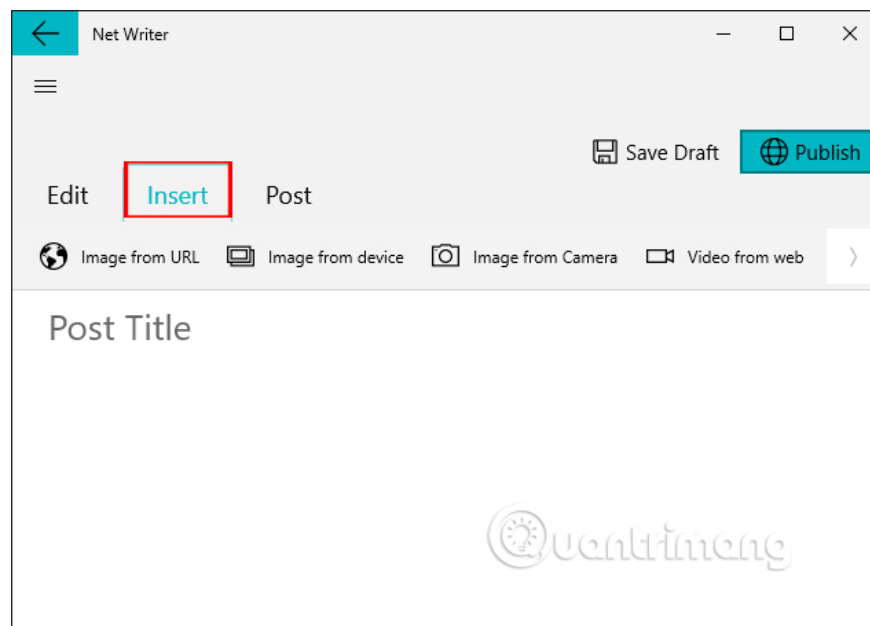

Soon display the interface to write content on the blog. Click the article to edit it if you have it or **click New Post** to create a new post.

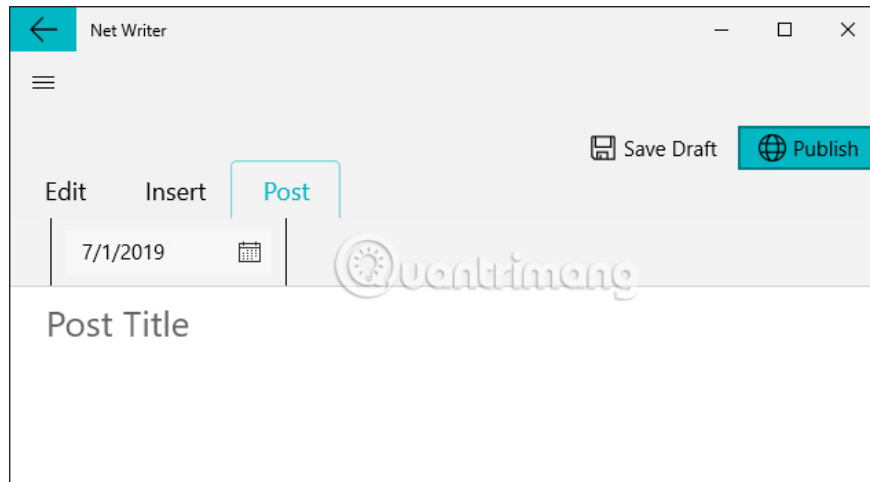

Show the editor interface. Here the user has 3 interfaces to edit the content of the article. **At Edit** we format text as bold, italic, center.

Insert card to insert photos, links, YouTube and Vimeo videos.

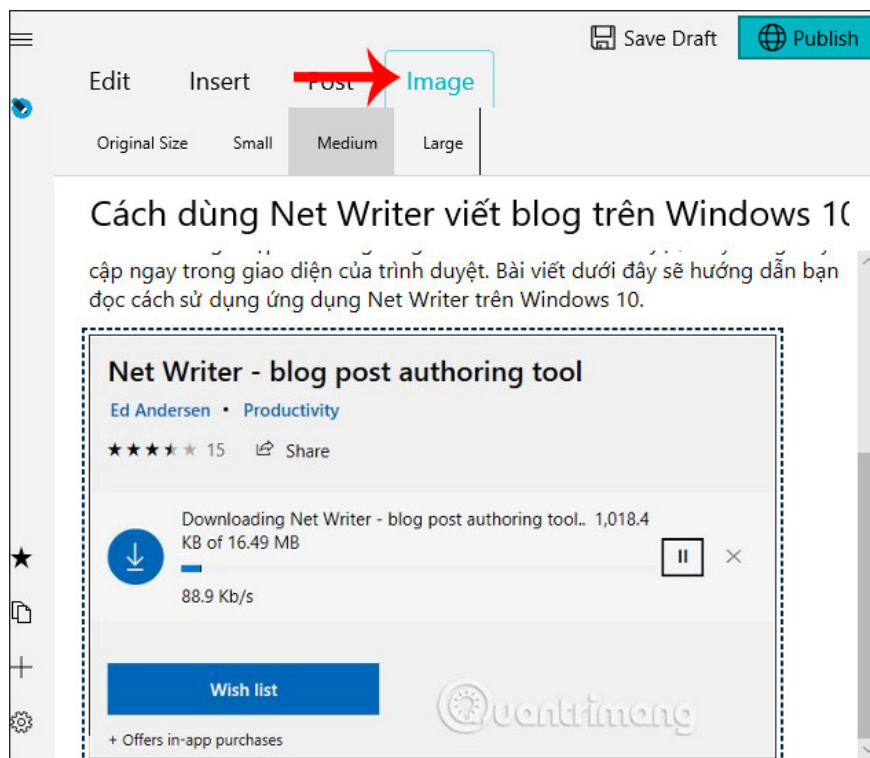

Post tags are used to create labels, schedule posting posts.

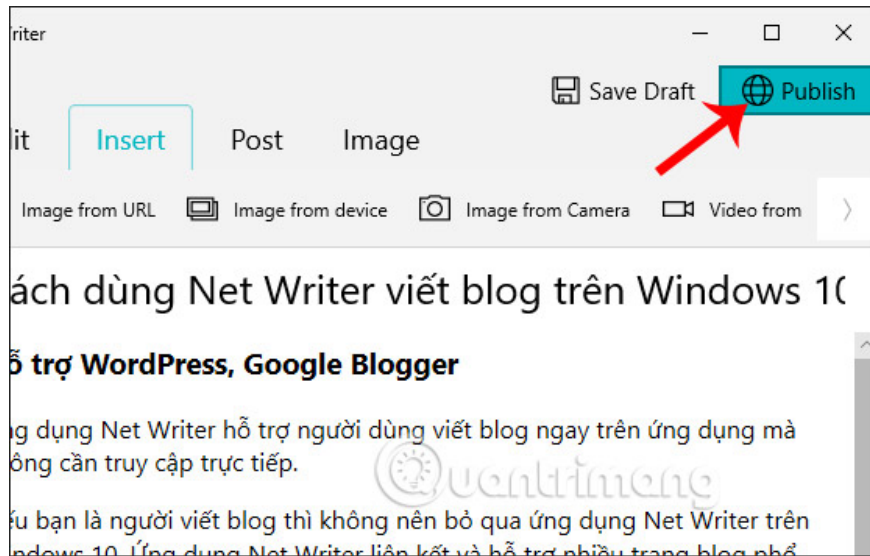

Step 4:

While composing content, there are enough Heading tags to apply to the title of the article. When **resizing the image**, users need to click on **the Image tab** at the top. Then there are many options to resize images such as Small, Medium, .

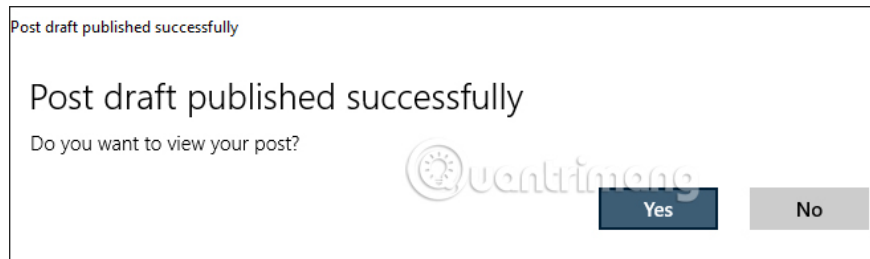

Step 5:

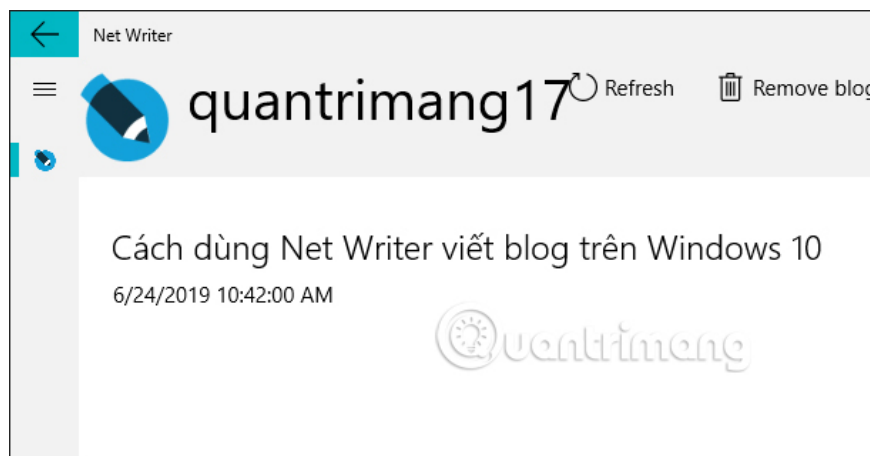

After composing the content press **the Publish button** to post the article.

Pop-up display asks users if they want to see posts posted to the blog. If you want to see the post on the blog, click Yes.

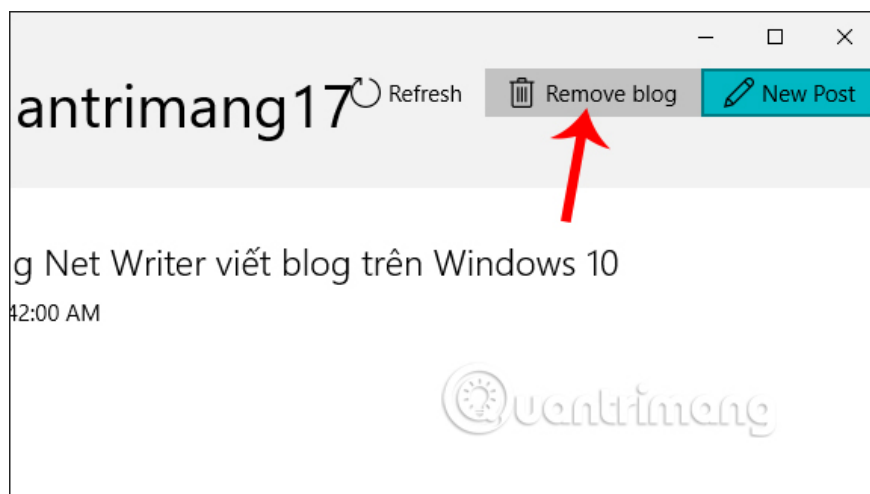

Also the article is displayed on the Net Writer interface. Continue clicking New Post to write more content.

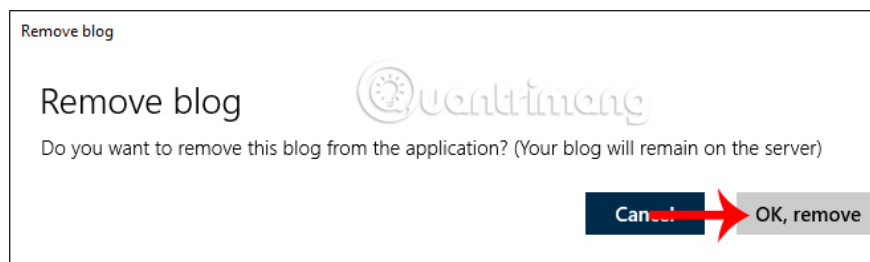

Step 6:

To exit the blog account that is currently logged in on the Net Writer application, click on **Remove blog** .

Click **OK, remove** to exit this blog. The account you login is still saved at the server system. Because you are using a free version, users can only use one blog.

Net Writer brings a simple and fast blogging application. However, with the free version the manufacturer limits many features. Users can upgrade to the Pro version to use some additional features such as logging in to multiple blog accounts, saving to drafts, syncing via OneDrive.

I wish you all success!
