

How to use NEV Privacy - Hide Pictures hide photos, apps on Android

NEV Privacy - Hide Pictures is an application to hide images and videos on Android devices with the construction of 2 file security layers.

NEV Privacy - Hide Pictures is an application that hides and locks files using passwords, images or using user-established fingerprints.

Data security is always a concern of many people. Not only using computer security software, detecting malware theft, but also on many mobile phones, there are also some personal file locking applications, to avoid them being exposed when others hold their phones. Among them is NEV Privacy - Hide Pictures, an application that hides media files on Android devices.

With NEV Privacy - Hide Pictures, users will set up passwords, drawings or fingerprints to hide the pictures or videos they want, even the collection on the device. The article below Network Administrator will guide you to read how to use NEV Privacy - Hide Pictures to hide pictures and videos on Android.

Step 1:

We download the NEV Privacy app - Hide Pictures for Android by following the link below.

1. Download NEV Privacy - Hide Pictures

Step 2:

Start the application, in the first interface click **Agree & Continue** to see the features of the application. Next you skip the introduction interface. In the New Privacy interface, users **set up a 4-digit password** to lock the NEV Privacy application and protect the applications locked by the program.

Next **enter the email address** to receive the unlock code for the in-app folders or albums when you forget your password. Finally press **v** on the right side of the interface to confirm.

1. How to hide pictures with NEV Privacy:

Step 1:

Go to the main interface of NEV Privacy, click **Got it** to use. You will see the total number of images and videos available on the device that the application identifies.

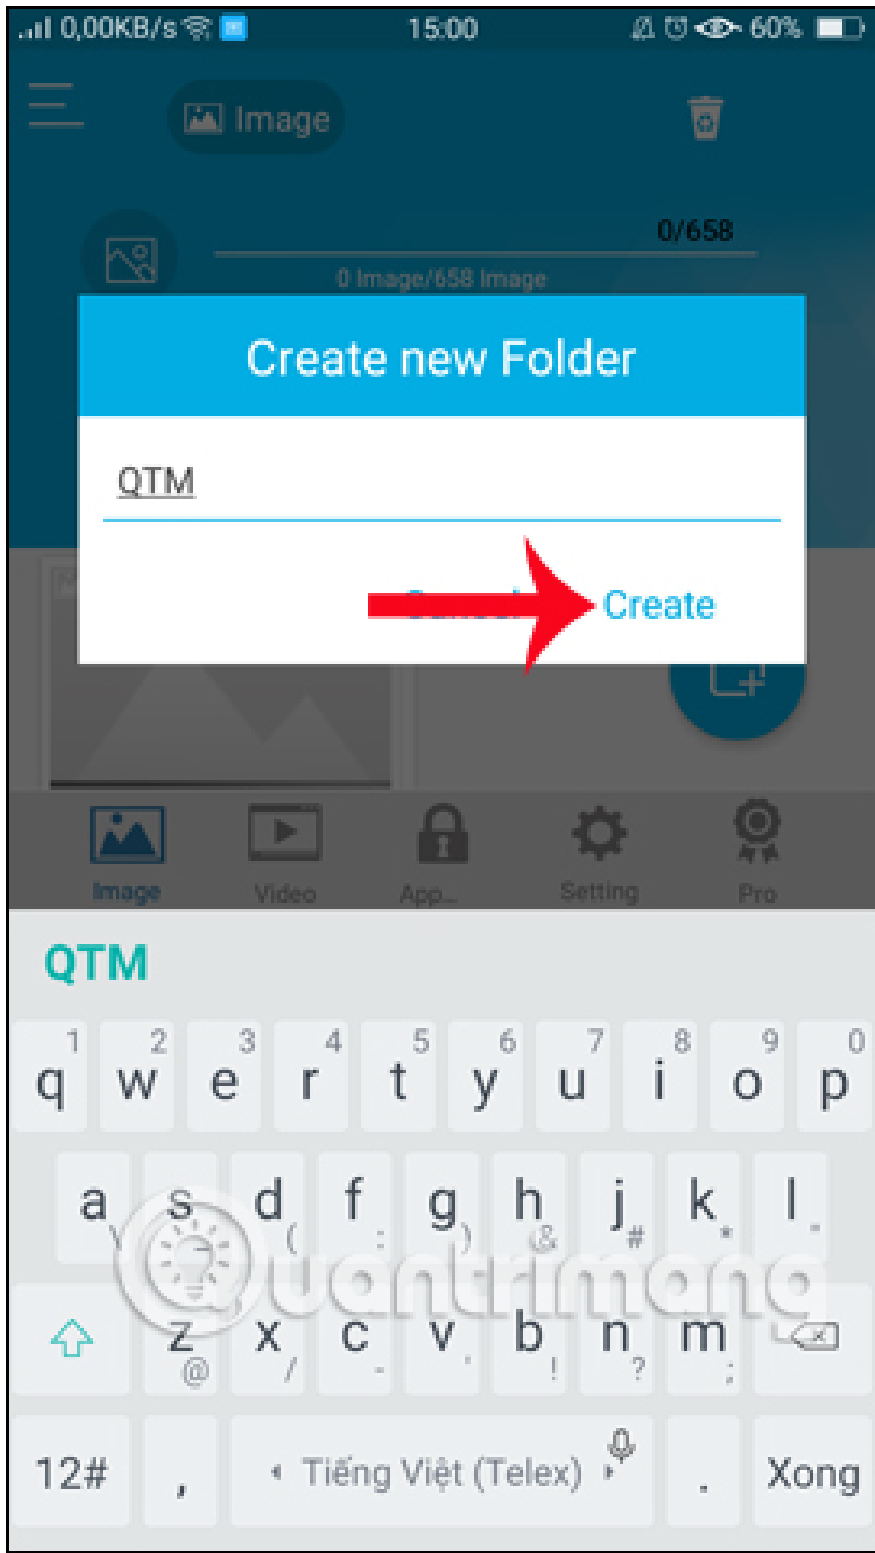

Click **the folder icon** in the right corner of the screen to create a folder containing images.

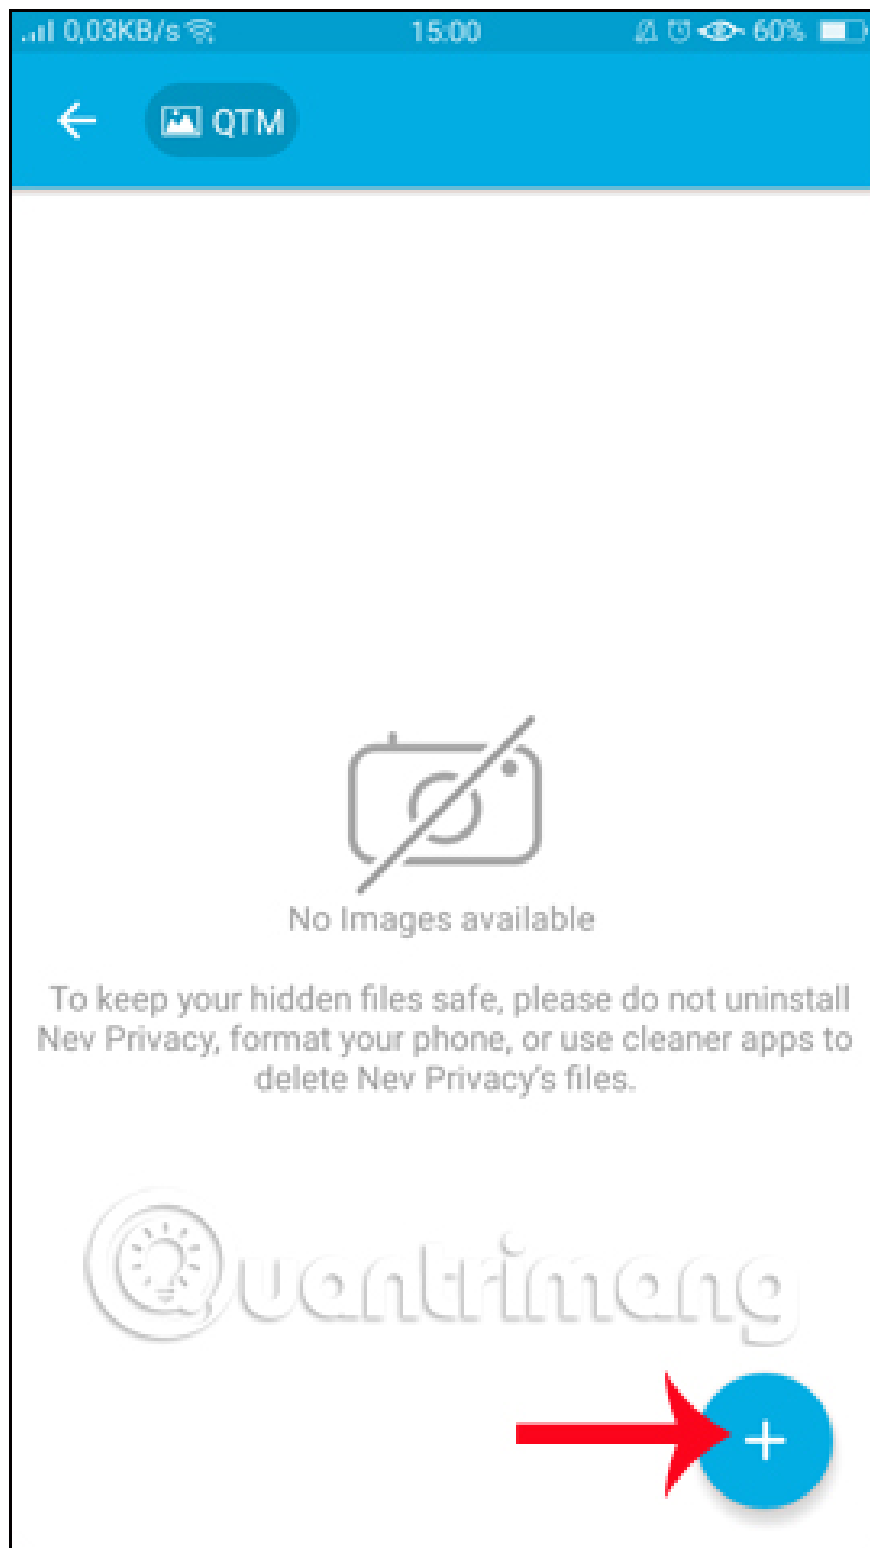

Step 2:

We **name the** hidden image **folder** and press **Create** to create. In the folder interface press **the plus icon** to add an image.

Step 3:

You will be given the option to add a photo from Gallery or take a new photo Camera. Here I will select Gallery. Click the image folder to hide the image with the application.

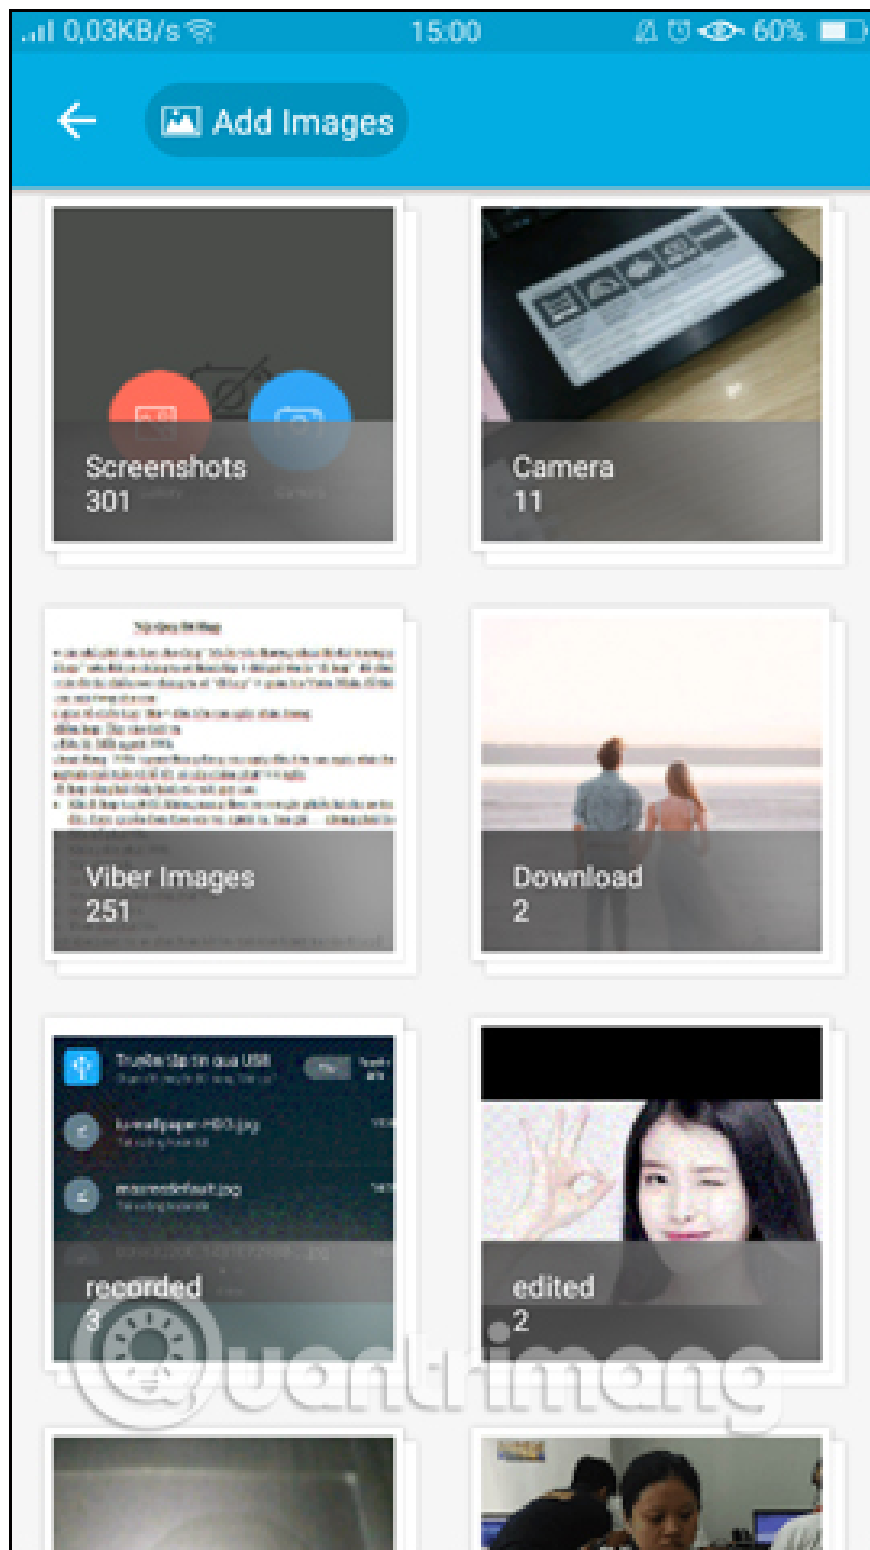

QTM

To keep your hidden files safe, please do not uninstall Nev Privacy, Gallery your phone, or Camera cleaner apps to delete Nev Privacy's files.

Step 4:

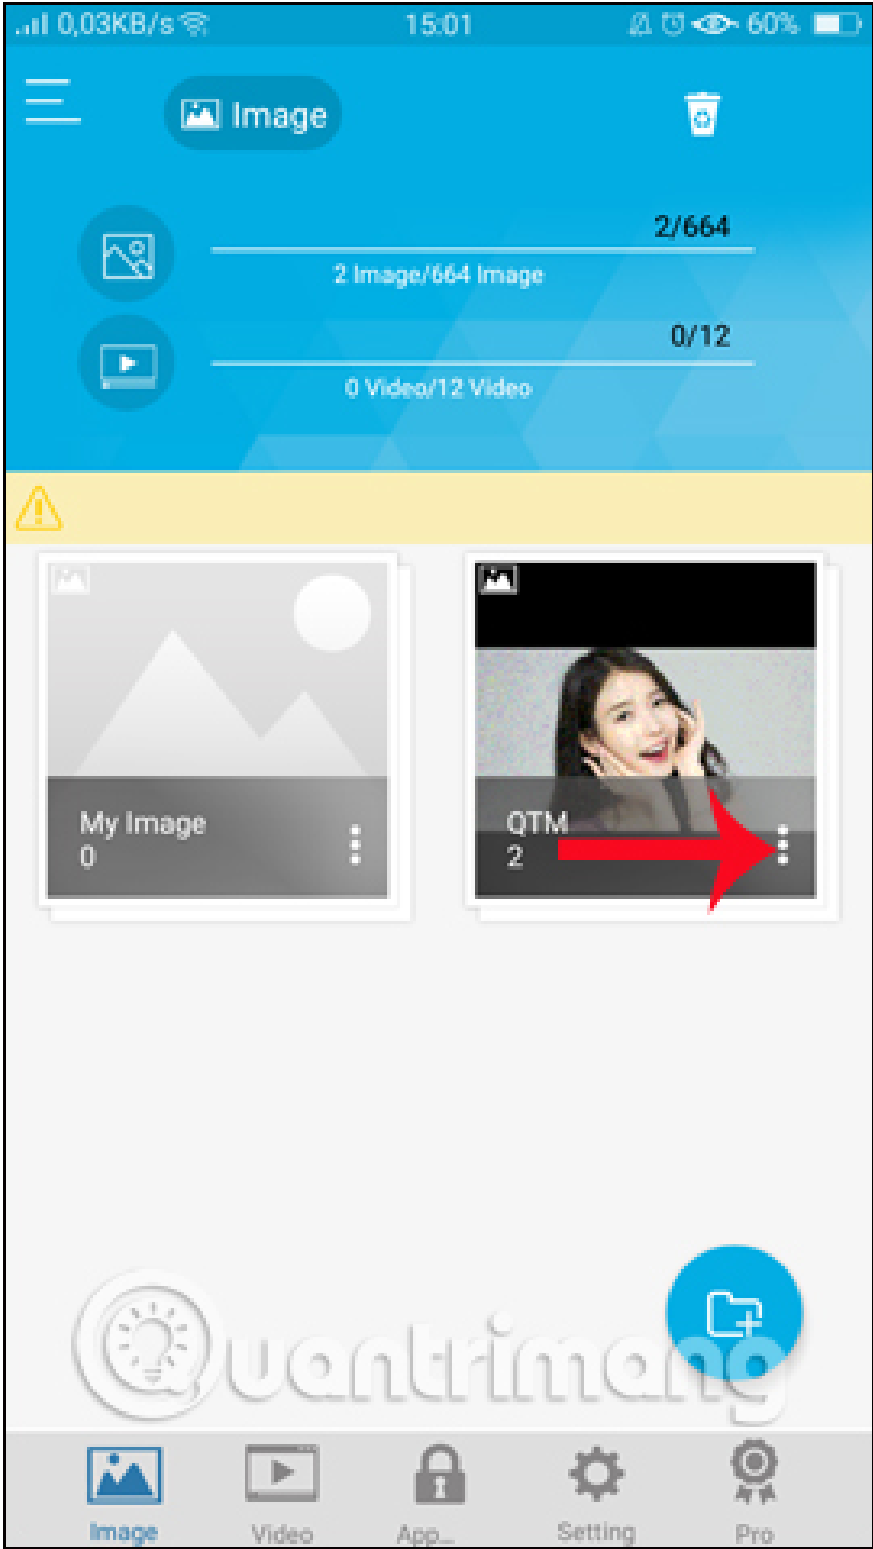

Next, select the image you want to hide and click **the Add button** below the interface. The program will then hide the image. A special feature of the application is that the image will be completely moved into the application, not in the form of copying so we do not need to delete the original file.

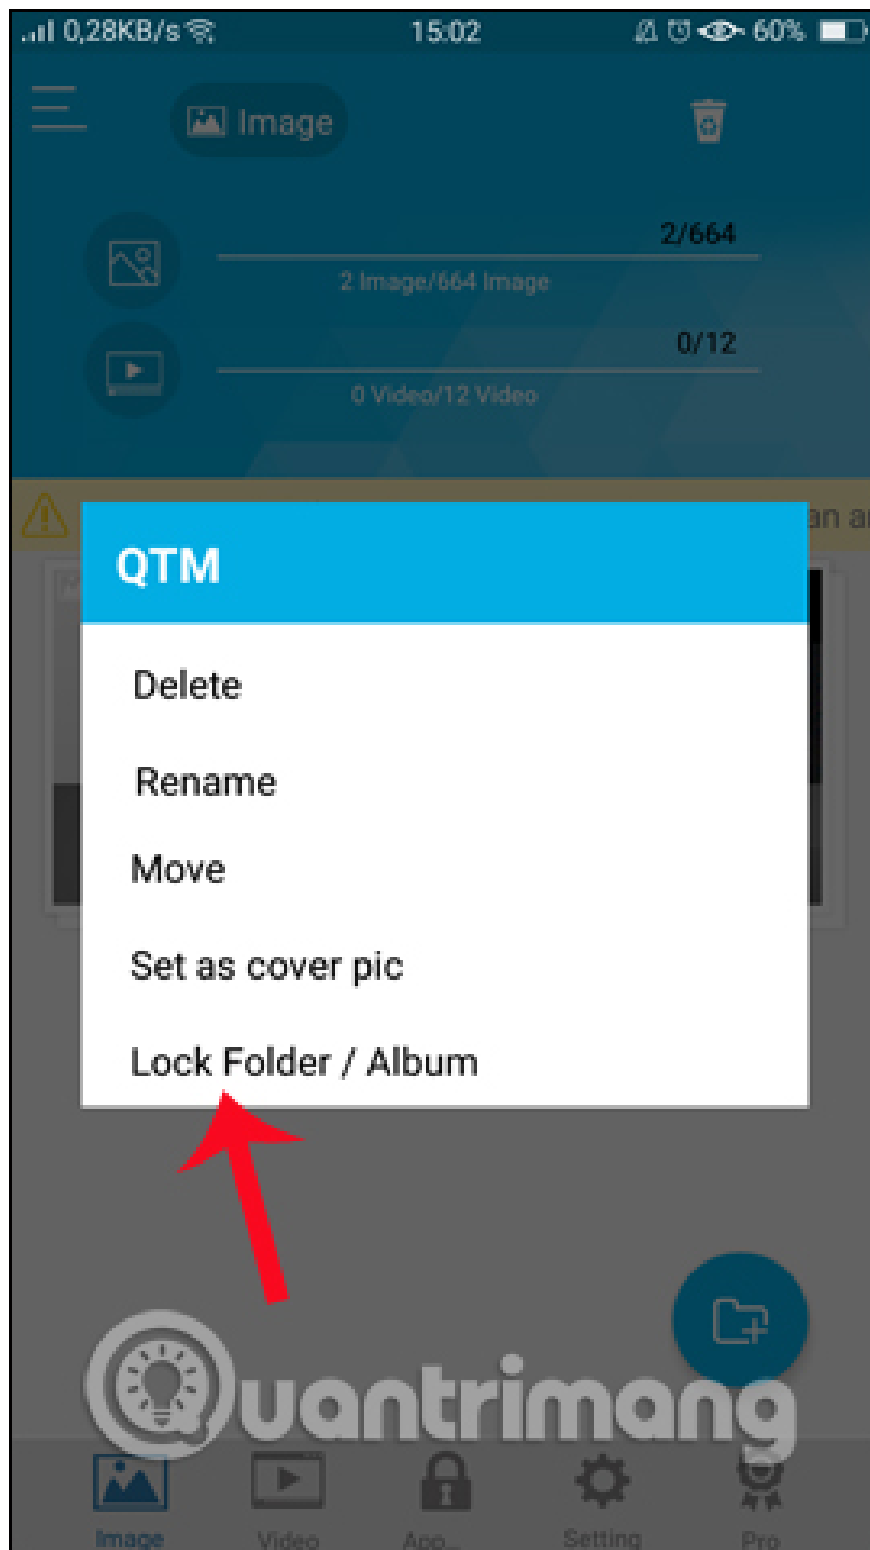

Step 5:

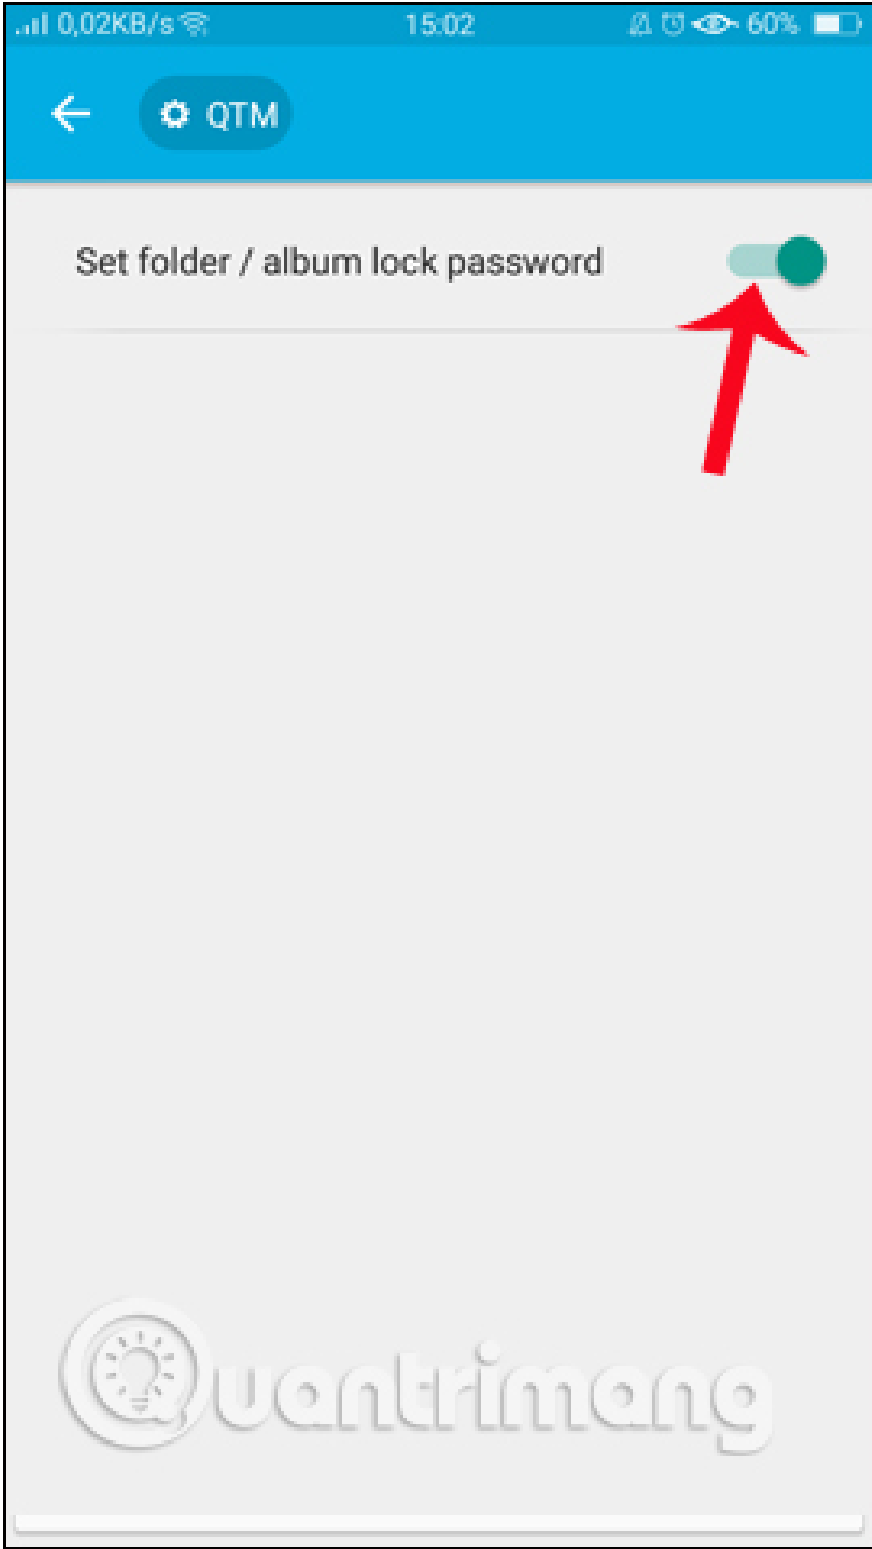

Return to the main interface of NEV Privacy and in the Image section. For each created folder you can set up a password protection layer. Click on **the 3 dots icon** and select **Lock Folder / Album** .

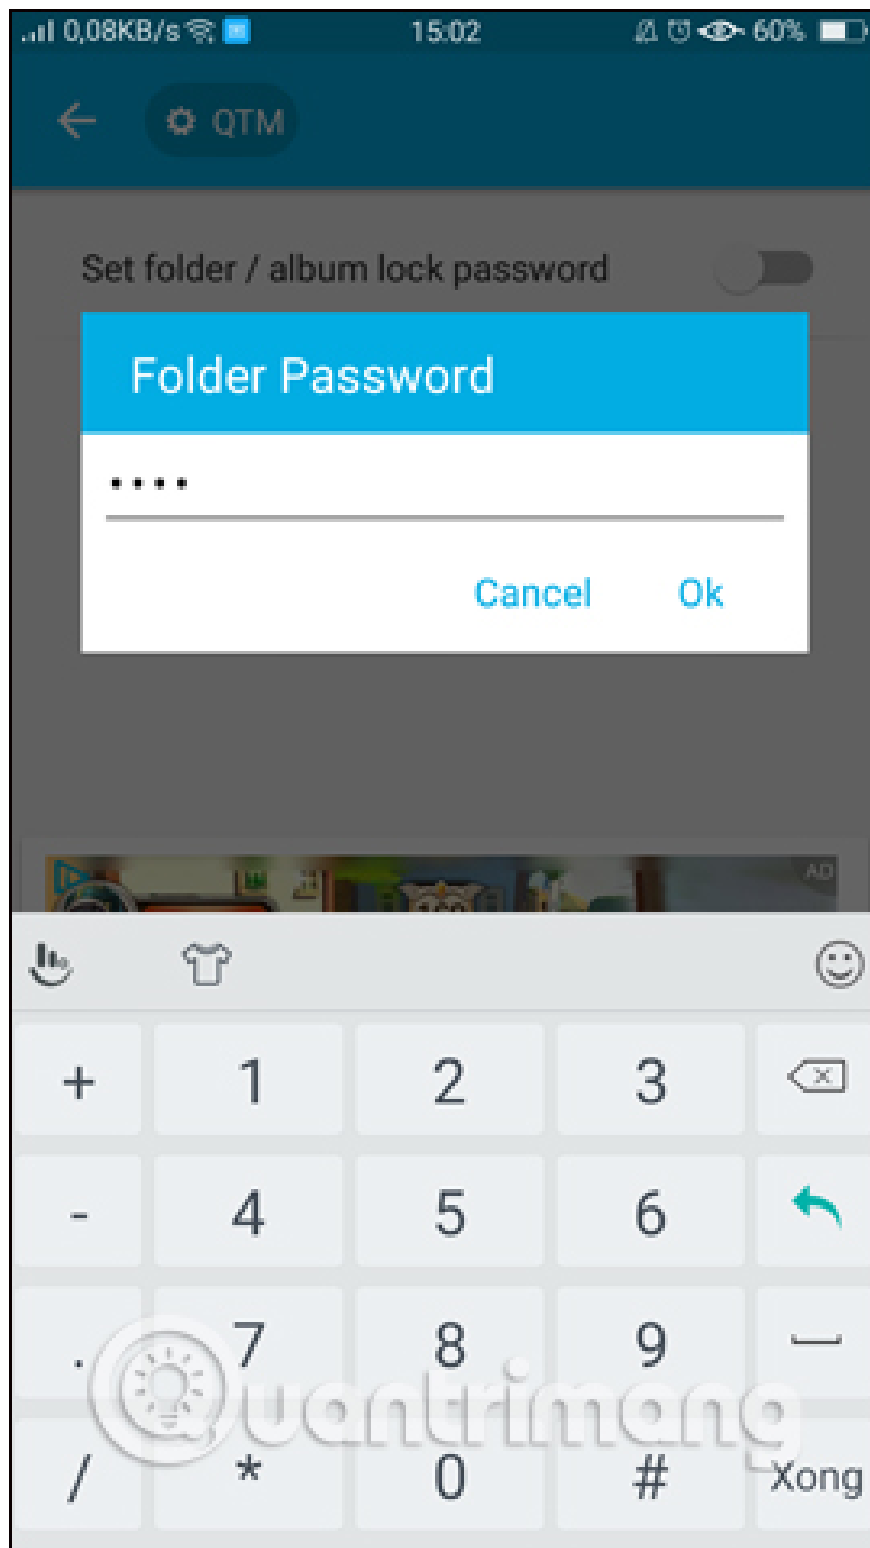

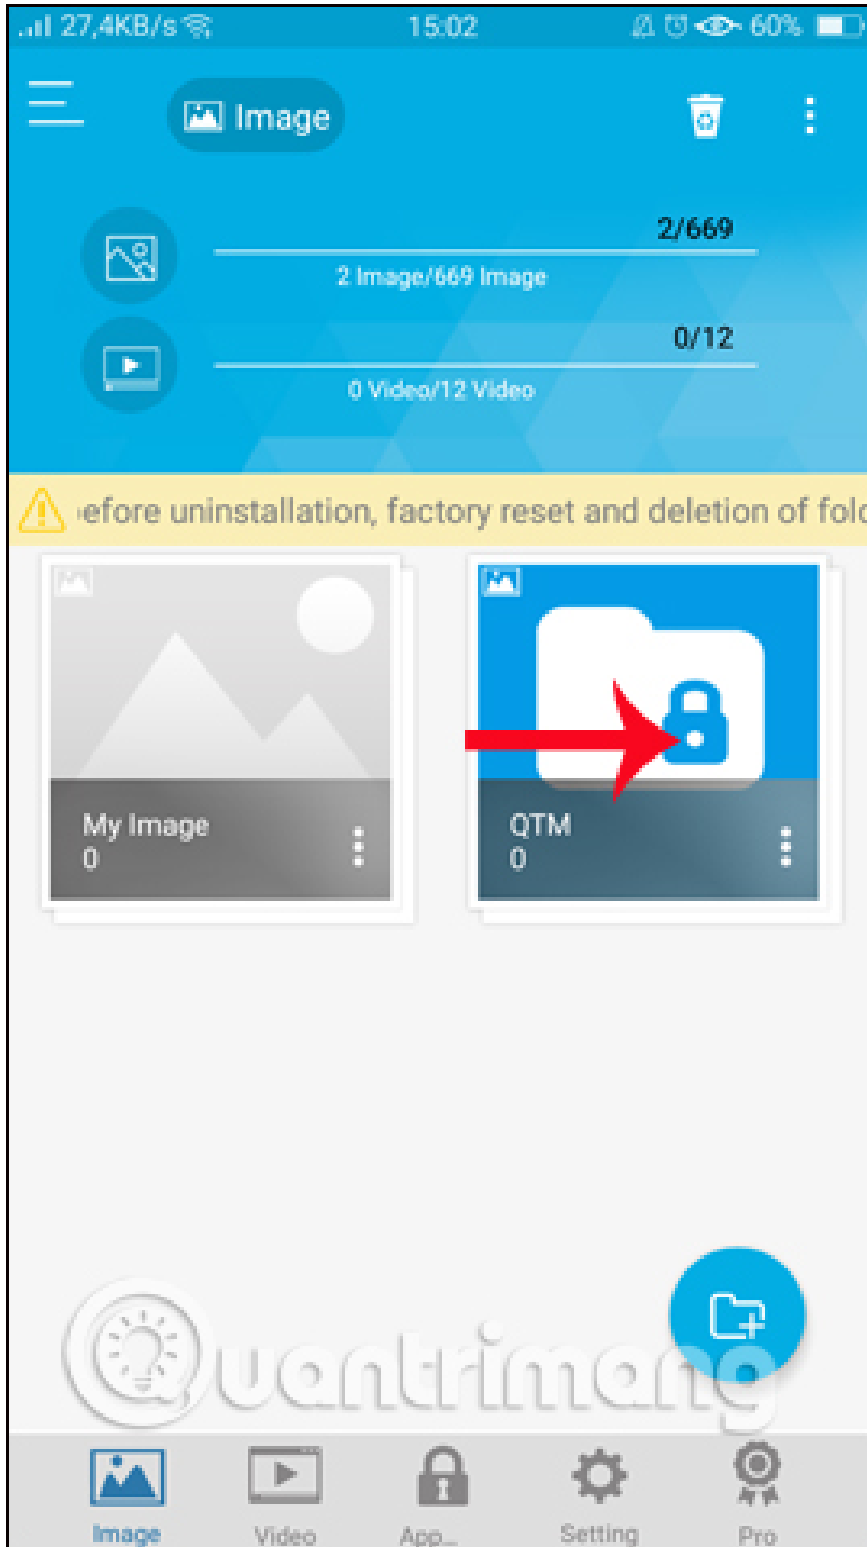

Step 6:

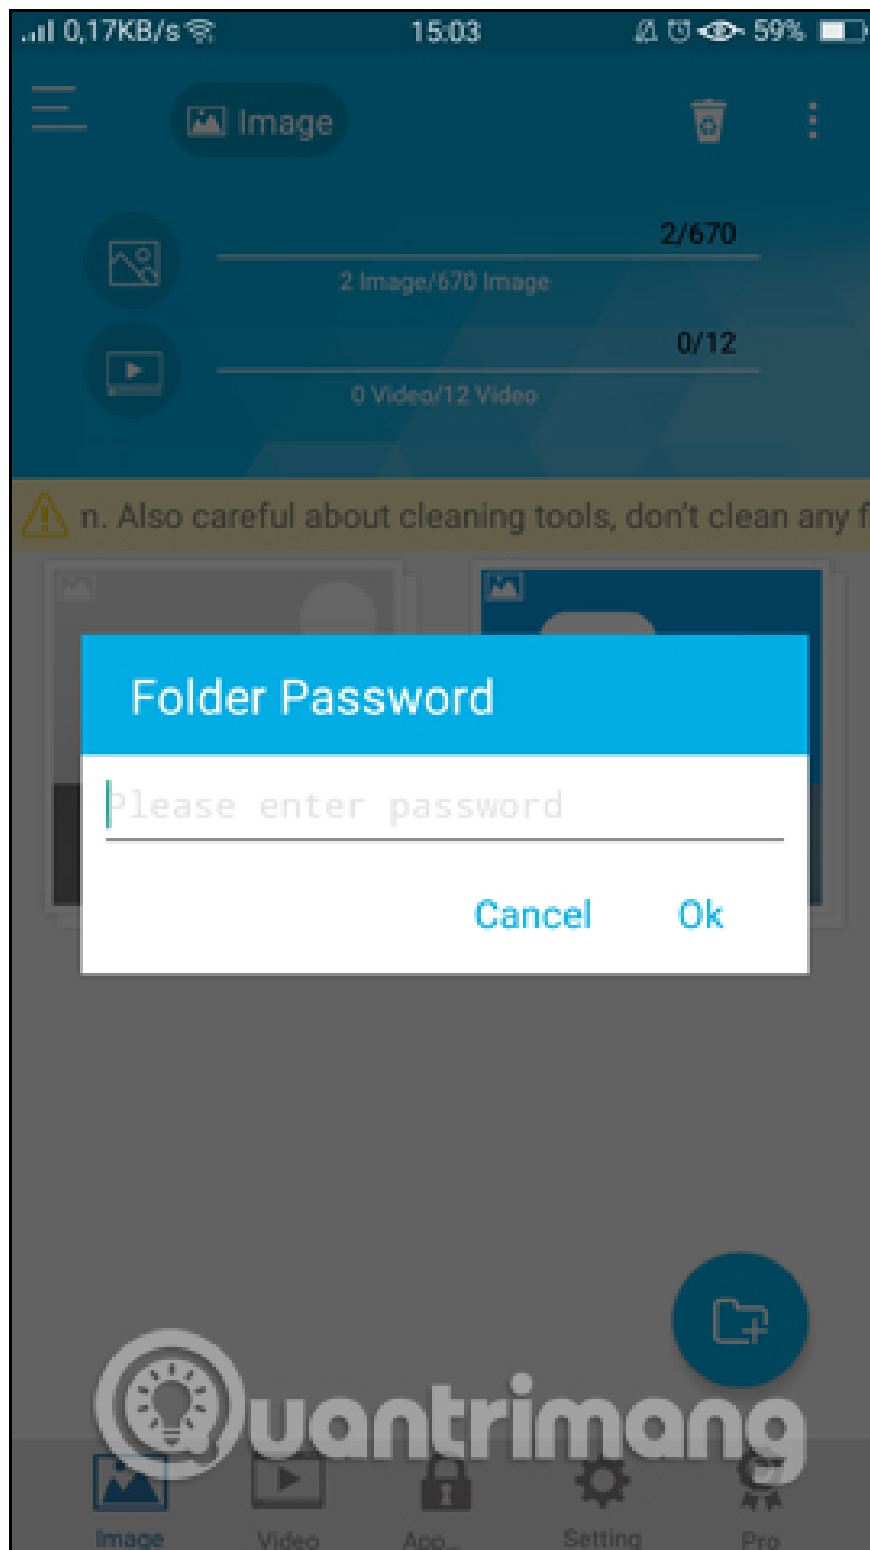

Next turn on the **Set folder / album lock password option**, then **enter the folder password** at the interface that appears, click OK to save.

Going back to the interface will see the protected folder with **the padlock icon** . If you want to open, you must enter the correct directory password.

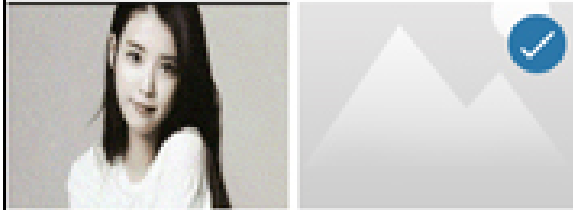

Step 7:

To **manage each image** in the folder, when selecting the image will appear options below the screen. If you click **Delete** , you will be asked if you want to delete the image. Click Delete to delete.

Unhide

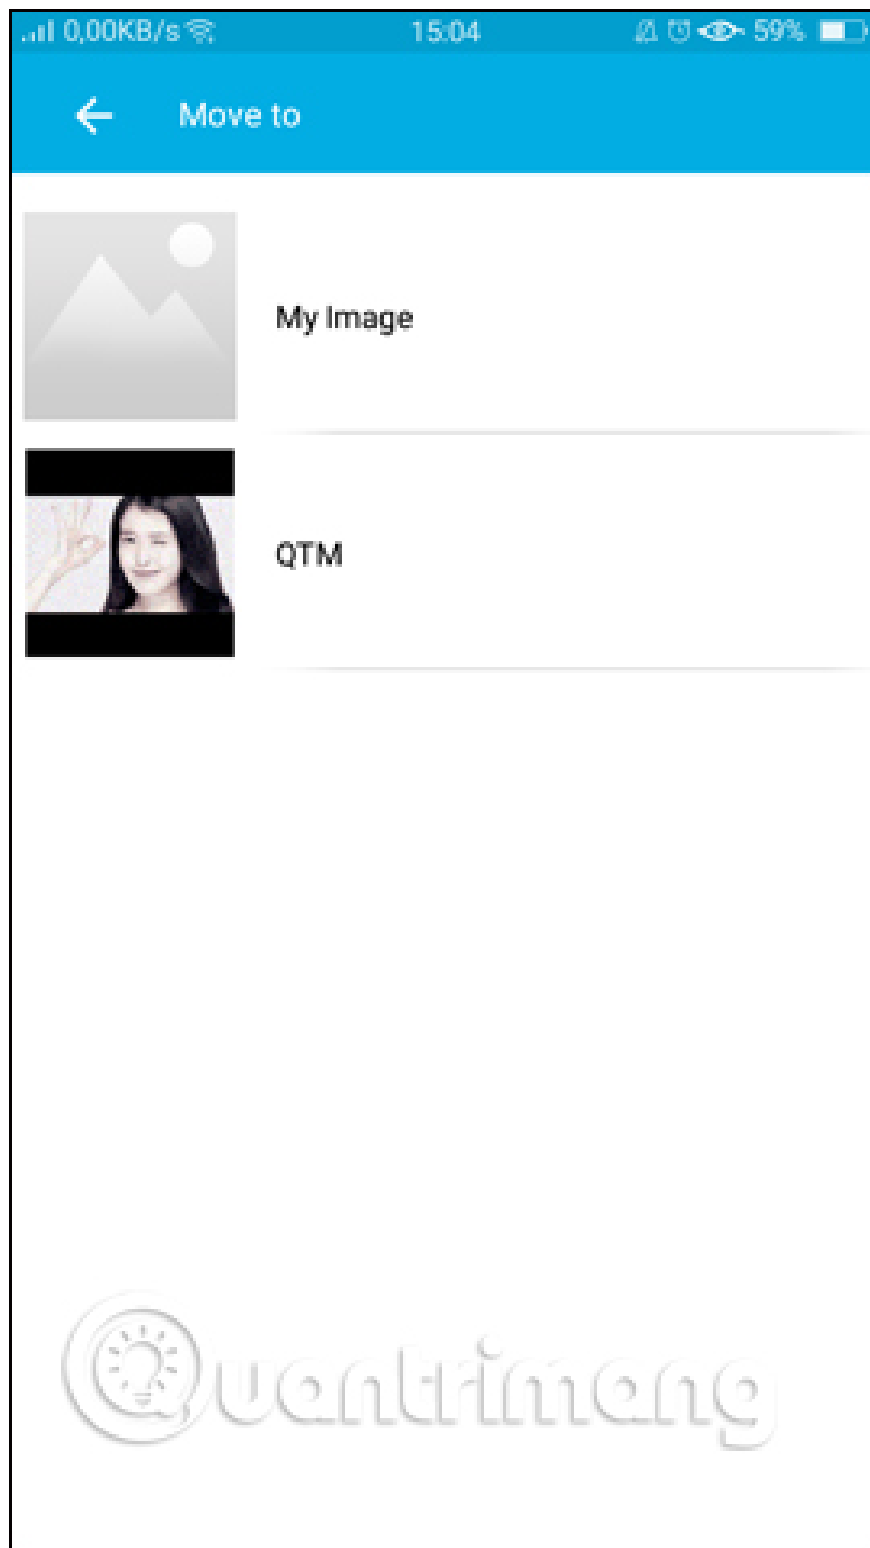

Share

If you want to retrieve the image, click **the trash can icon** . Then select the image you want to retrieve and **select Move** . If you want to delete it completely, press Delete. **Select the folder you** want to save the image to.

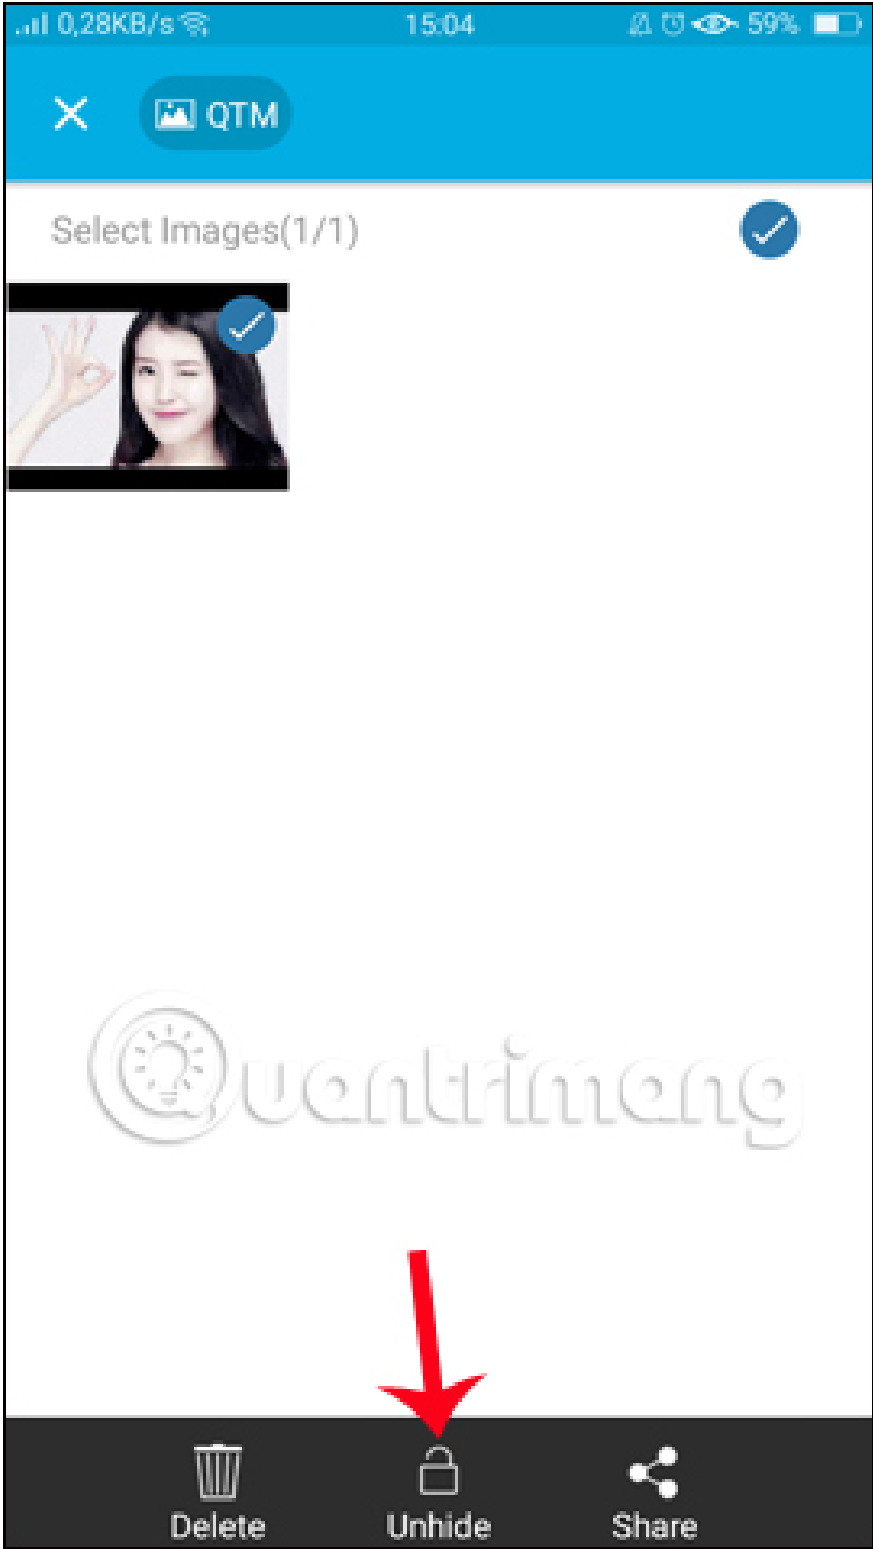

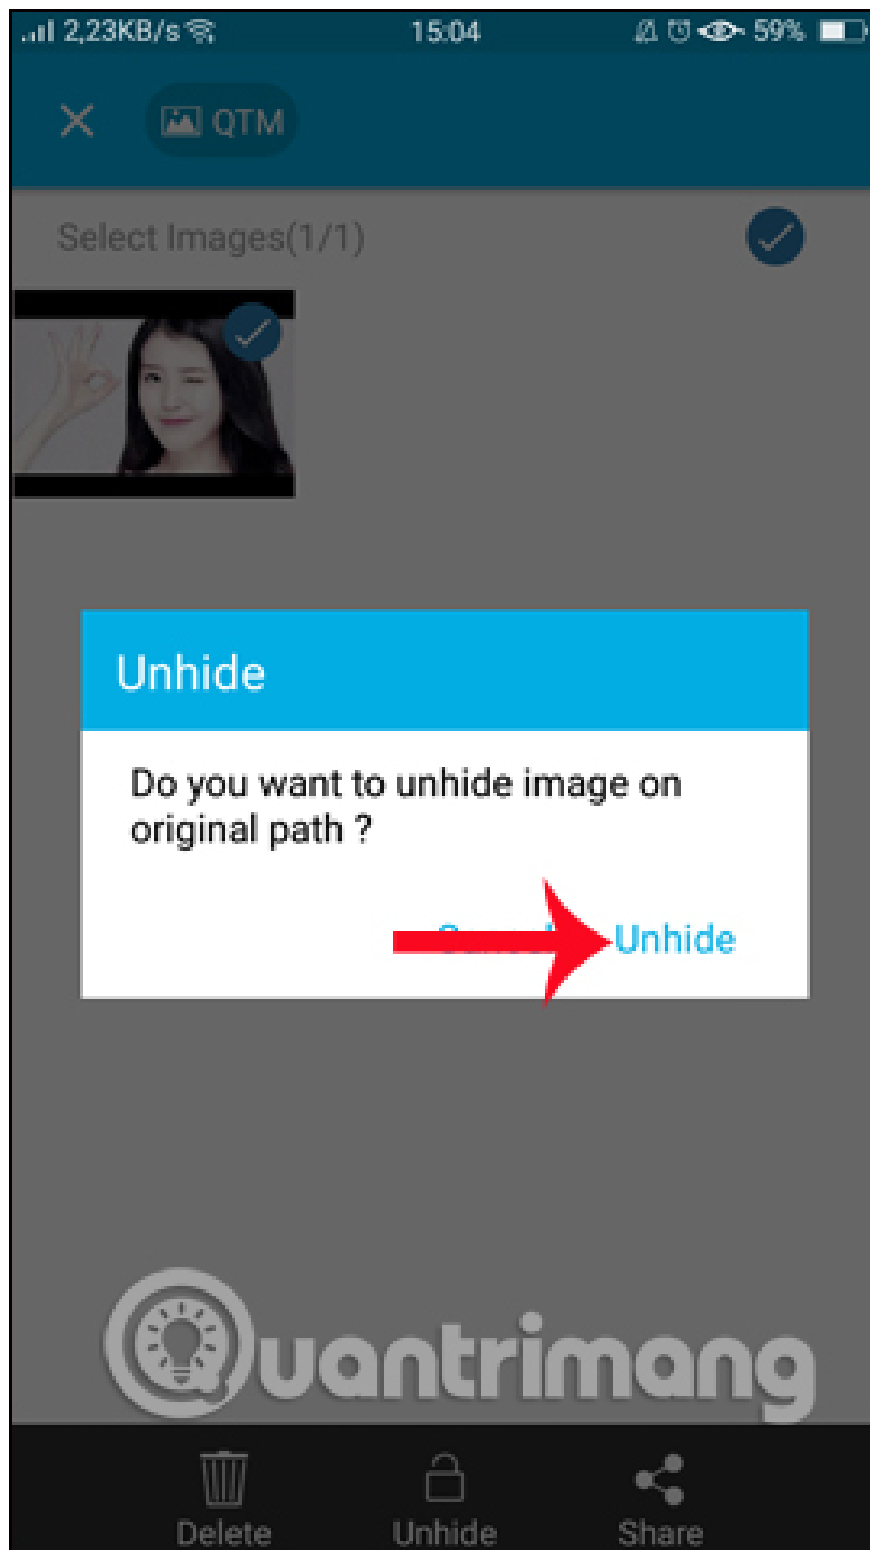

Step 8:

In case you want to **return the image to the device folder** and unlock it, select the image and then select **Unhide** . You will ask if you want to return the image, press **Unhide** .

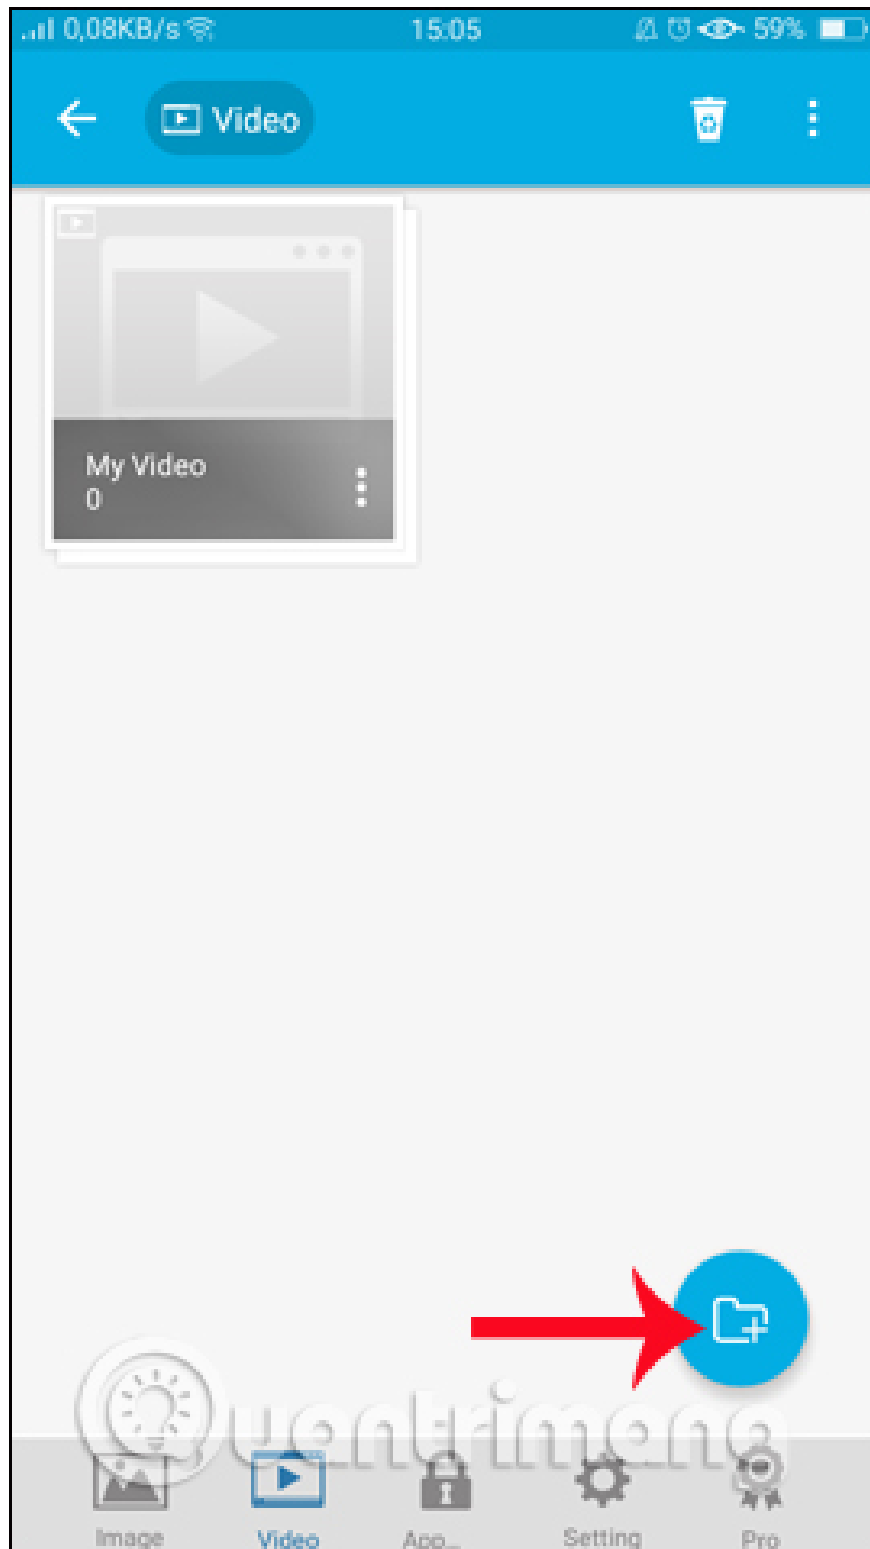

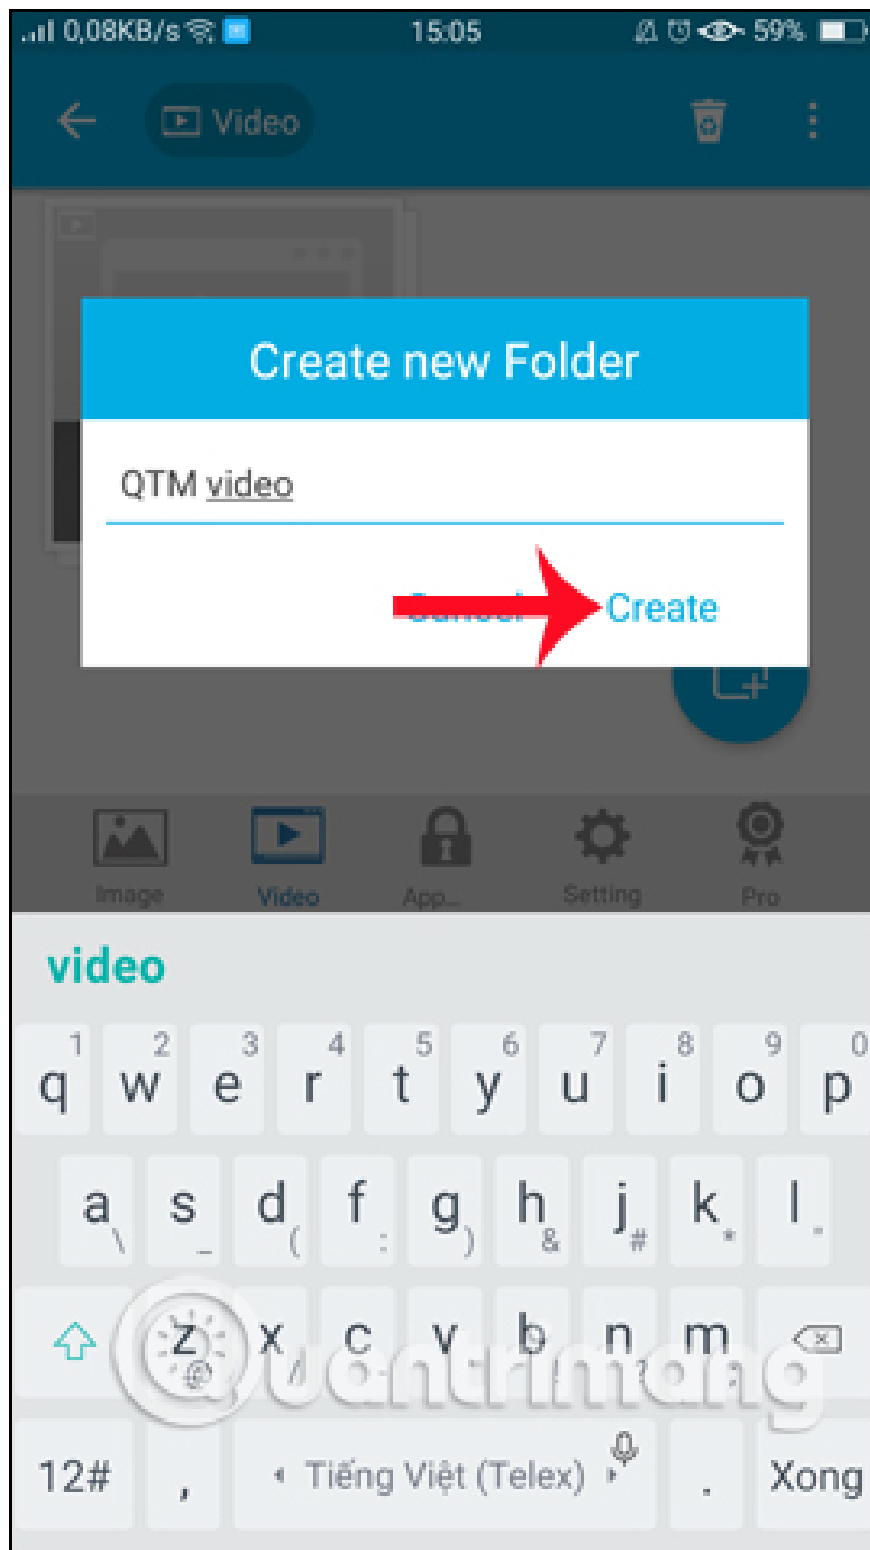

2. How to hide Android videos with NEV Privacy:

The way to hide videos with the application is similar to when we hide images.

Step 1:

Click on the Video item, then click on **the folder icon** . Set a new name for the folder and press **Create** to create.

Step 2:

Click **the plus icon** to select the video you want to hide. Supported video formats are Mp4 and AVI. Open the video folder you want to hide and select the video, click **Add** . The video hiding process with NEV Privacy will also proceed later.

3. How to hide the application with NEV Privacy:

This feature will allow us to lock the Settings and applications on the system.

Step 1:

Click on **App** . on the side then select **Enable Now** . Then **turn on the New Privacy option** to allow the application to interfere with the system.

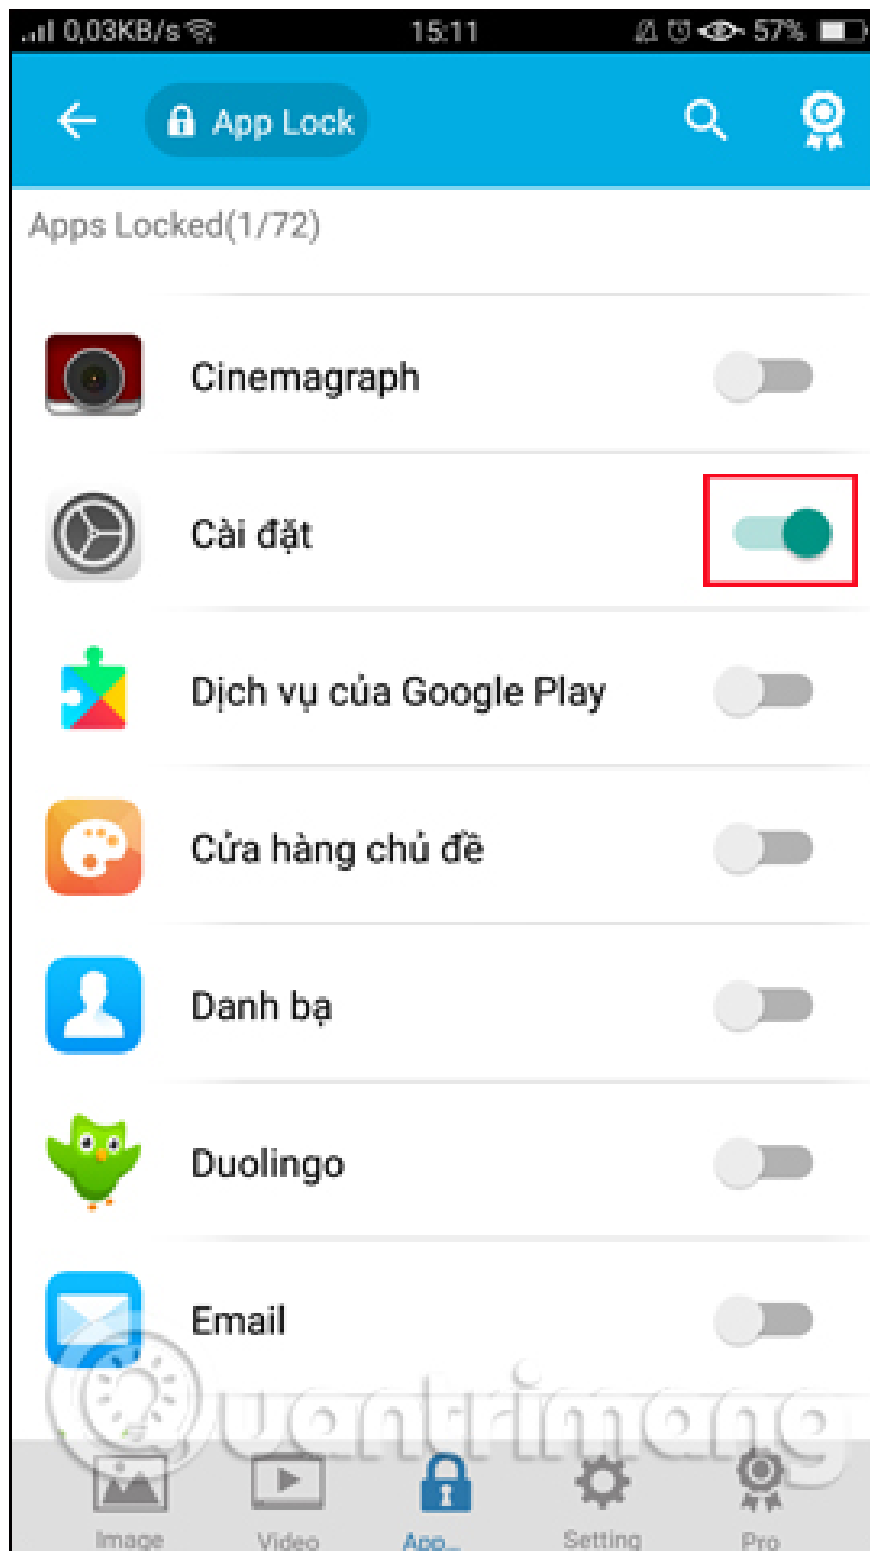

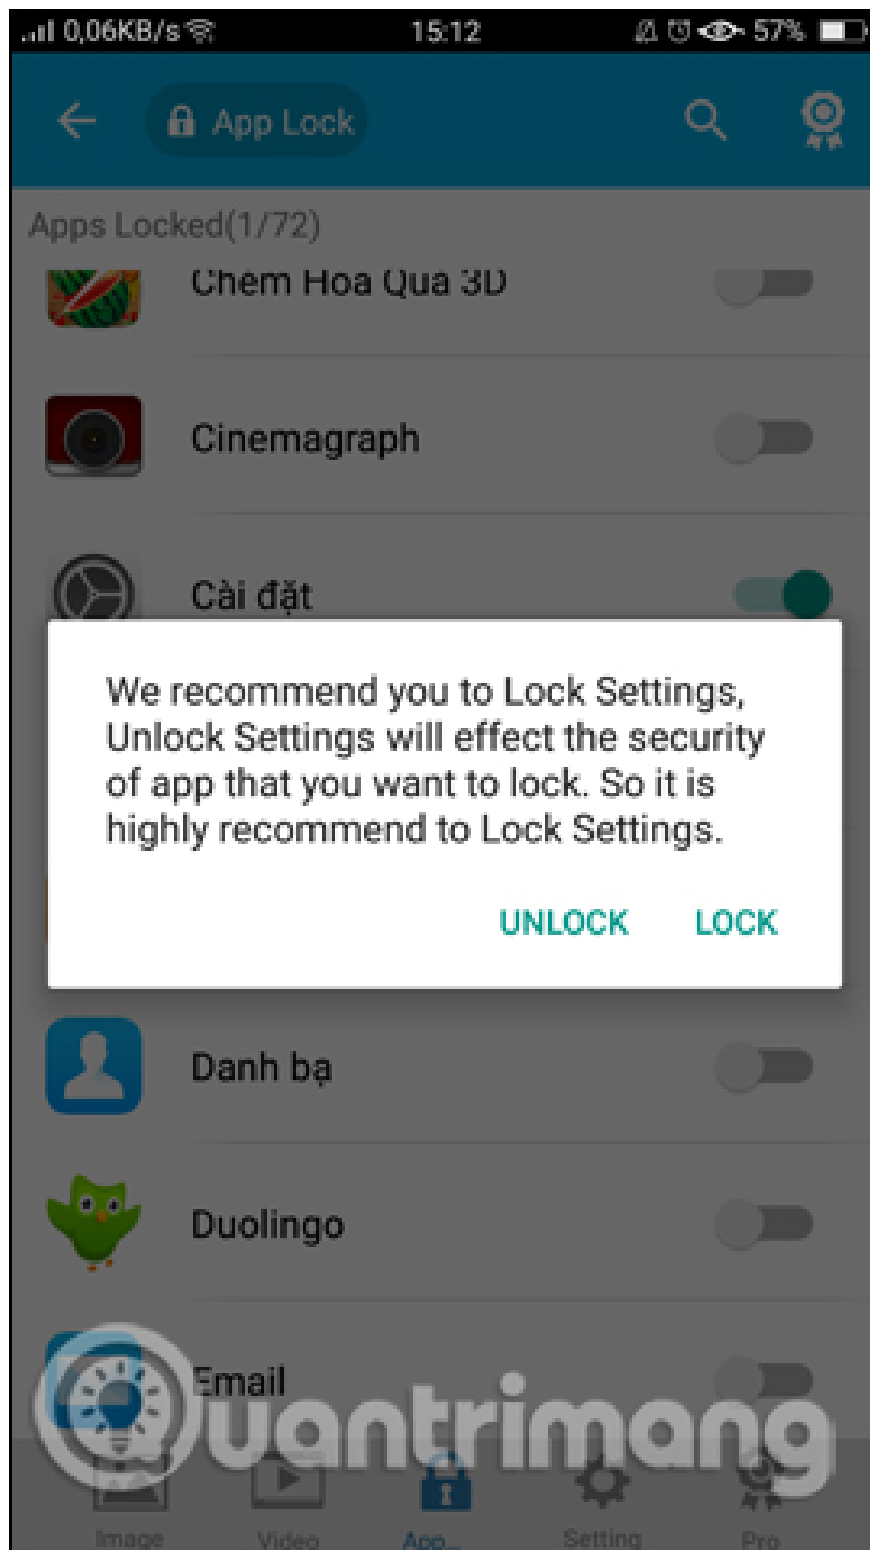

Step 2:

When done, **the Settings section will automatically be locked** to protect the settings. The access password is the password set at the first time.

To **lock another application** just **drag the circle button to the right** . Newly installed applications will also be required to lock. To unlock it, just push the round button to the left. With the Settings section you will be

recommended to enable lock mode.

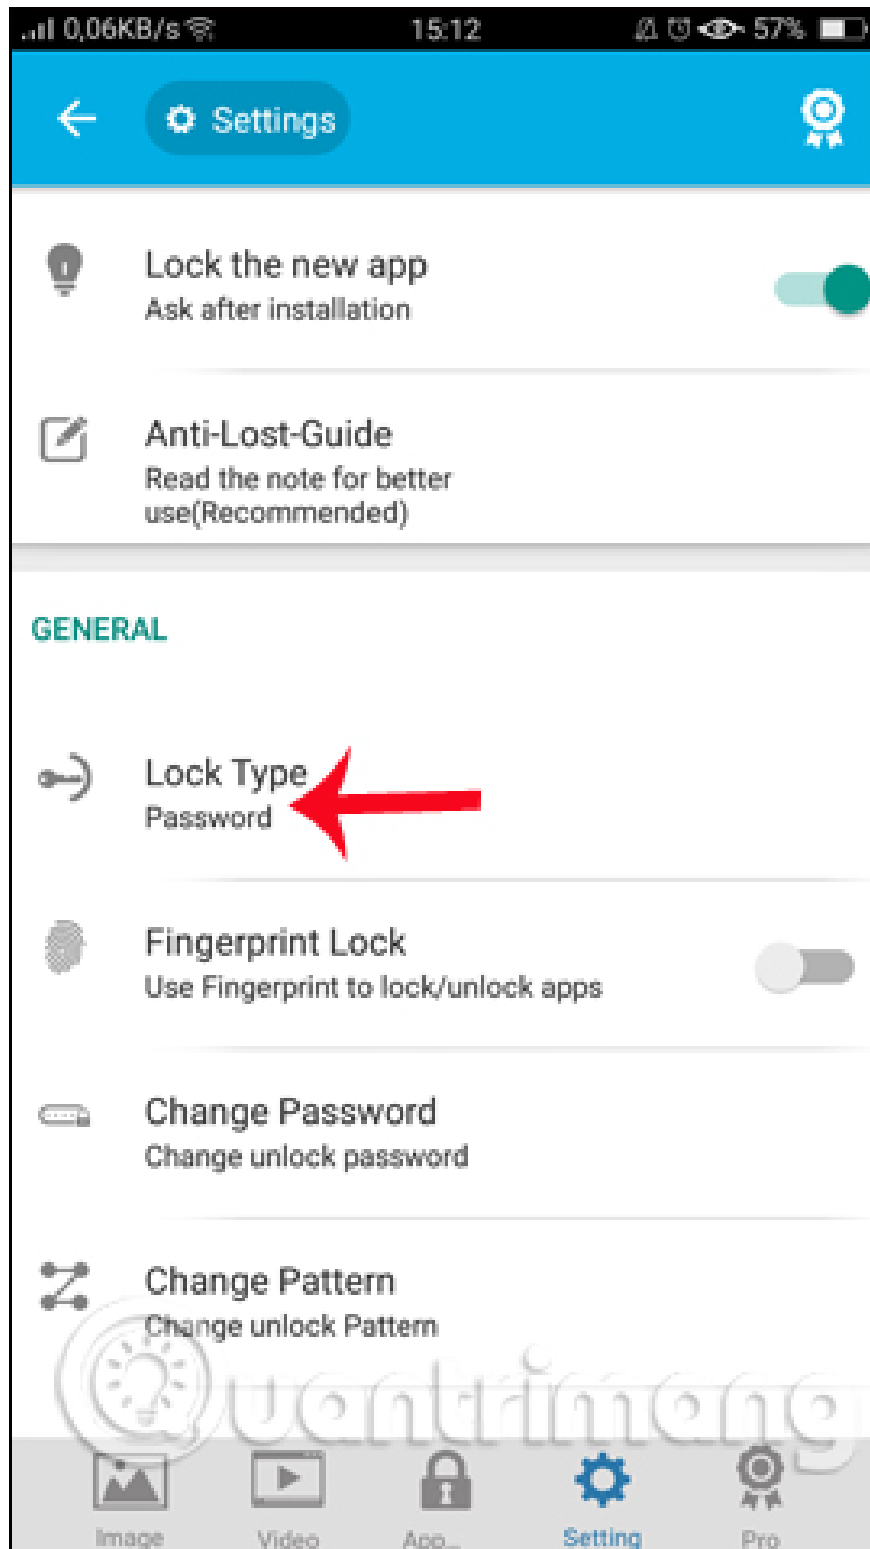

4. Setting up NEV Privacy application:

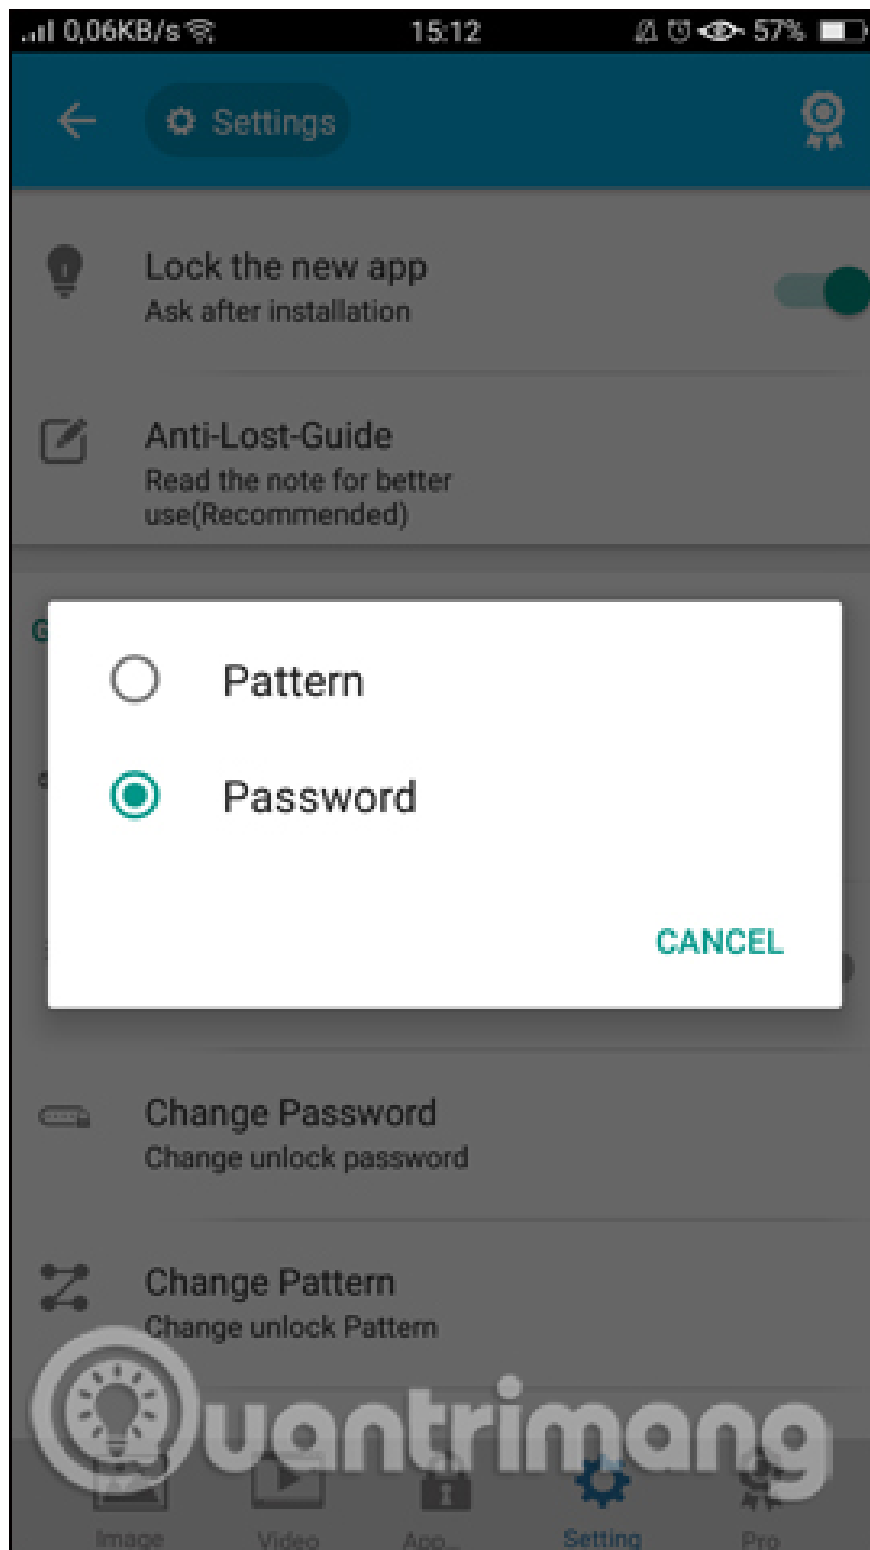

Step 1:

We click on **the Settings item** below. Switch to the new interface and navigate to **General** then select **Lock Type** , if you need to change the security type. If you select the type of drawing, click Pattern and enter a

security drawing.

It also supports security with Fingerprint Loc fingerprint sensor with devices of 6.0 or higher.

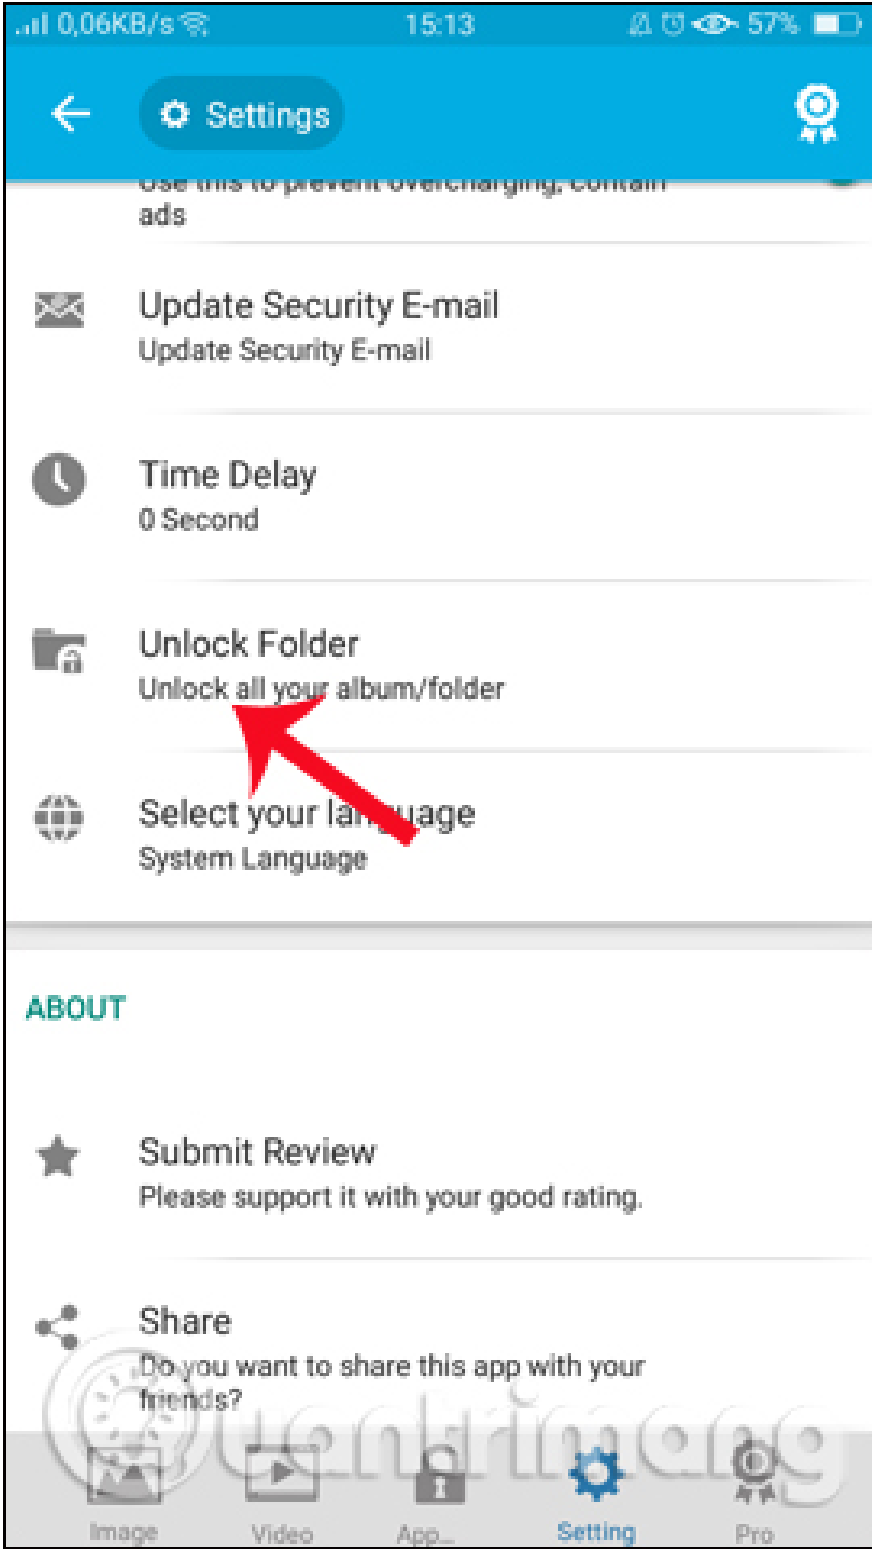

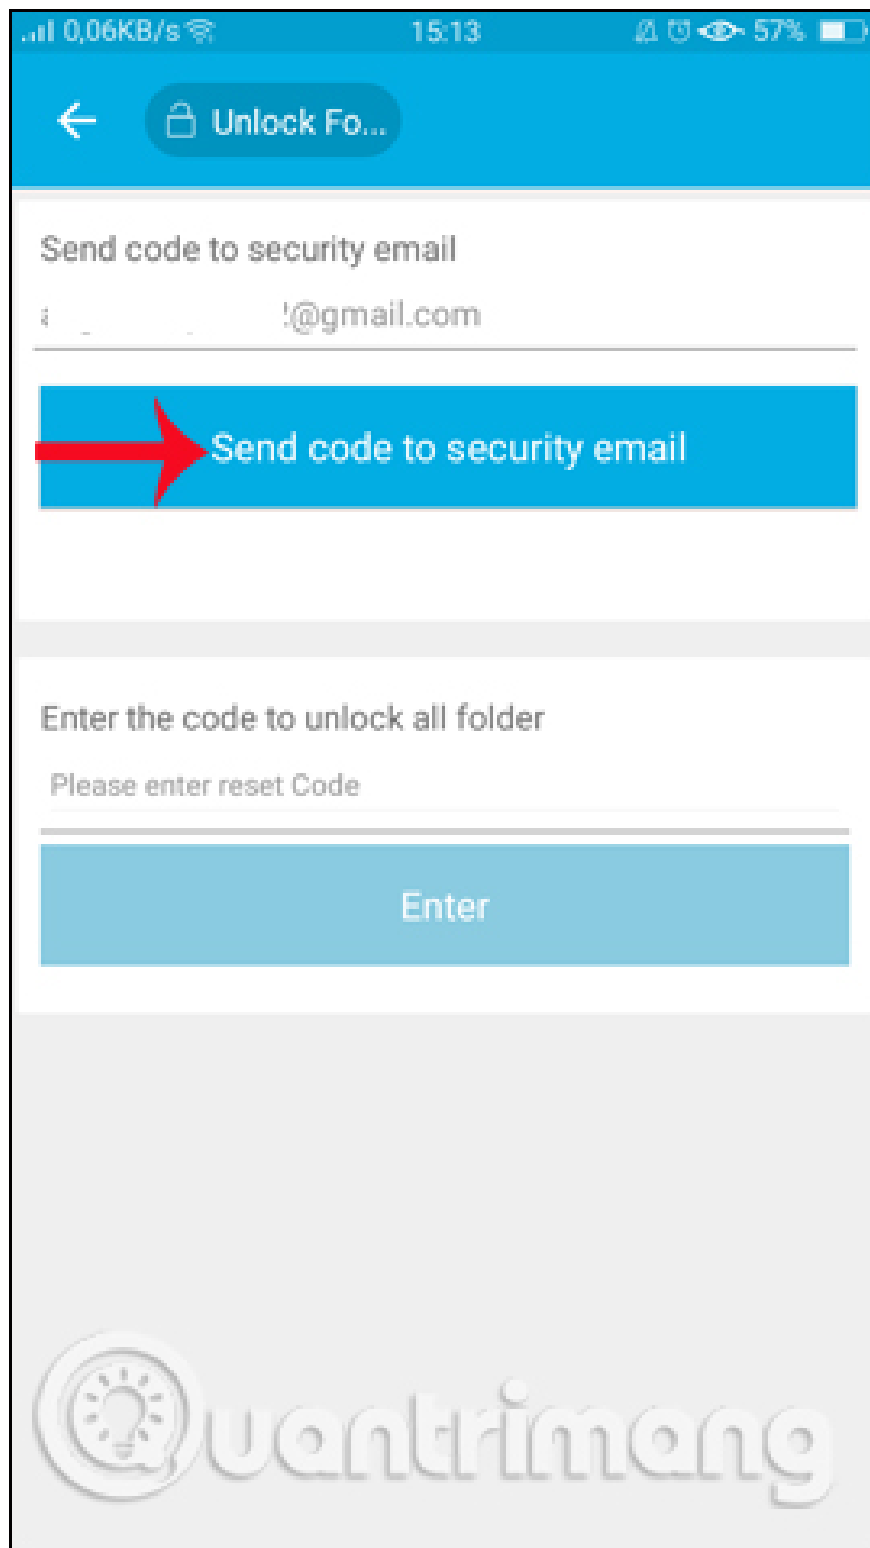

Step 2:

Also at this interface, if the user forgets the unlock password click **Unlock Folder** . Then click on the button **Send code to security email** . We will receive the code sent to the registered email address.

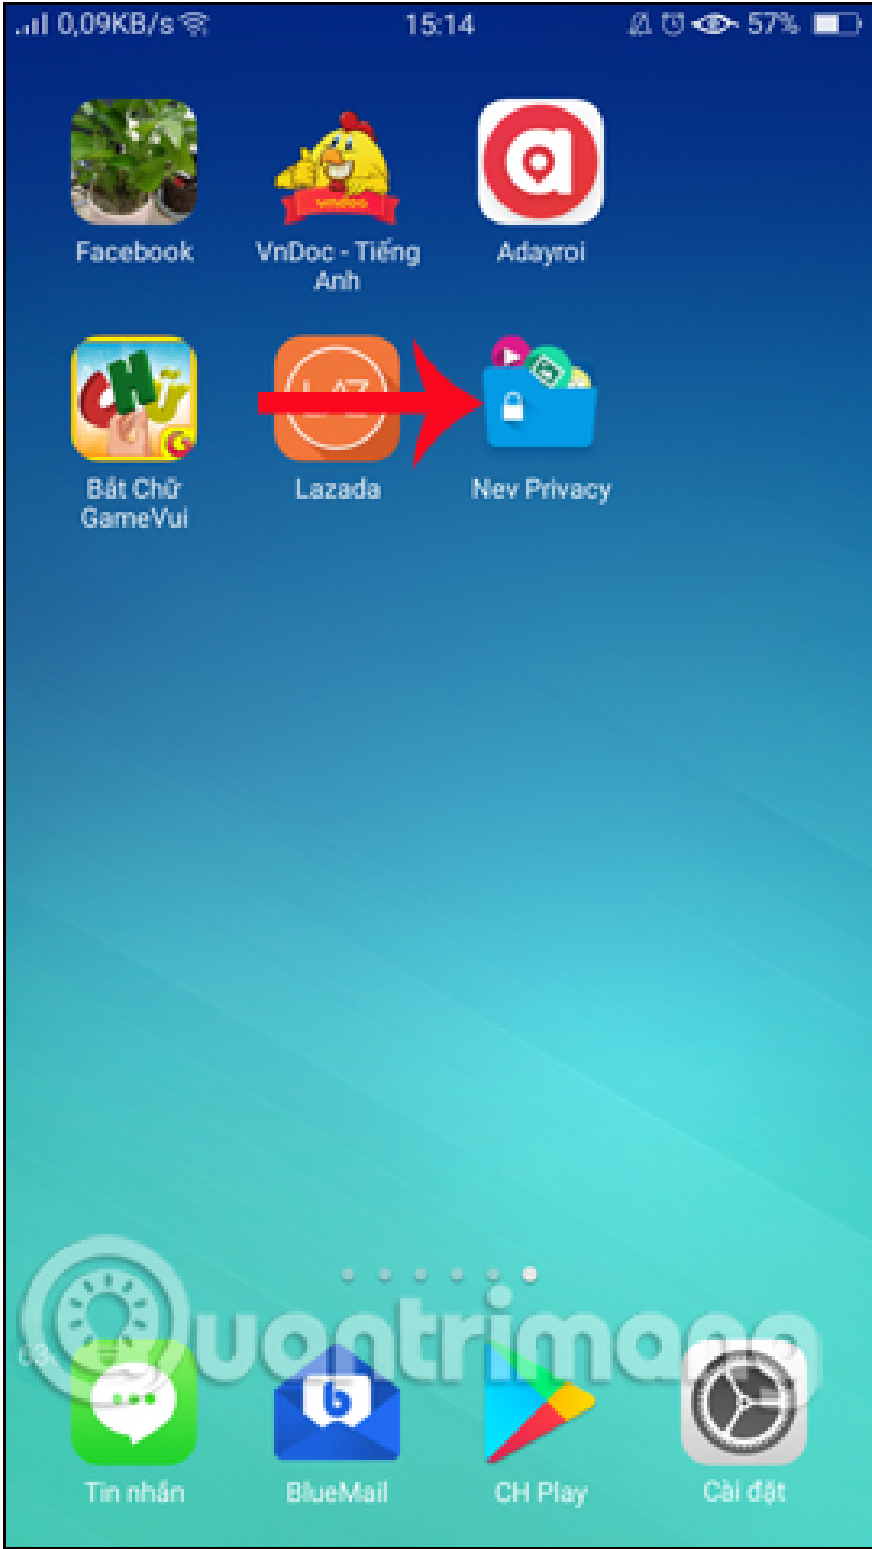

Just enter that code in the Enter the code to unlock to all folder and press Enter.

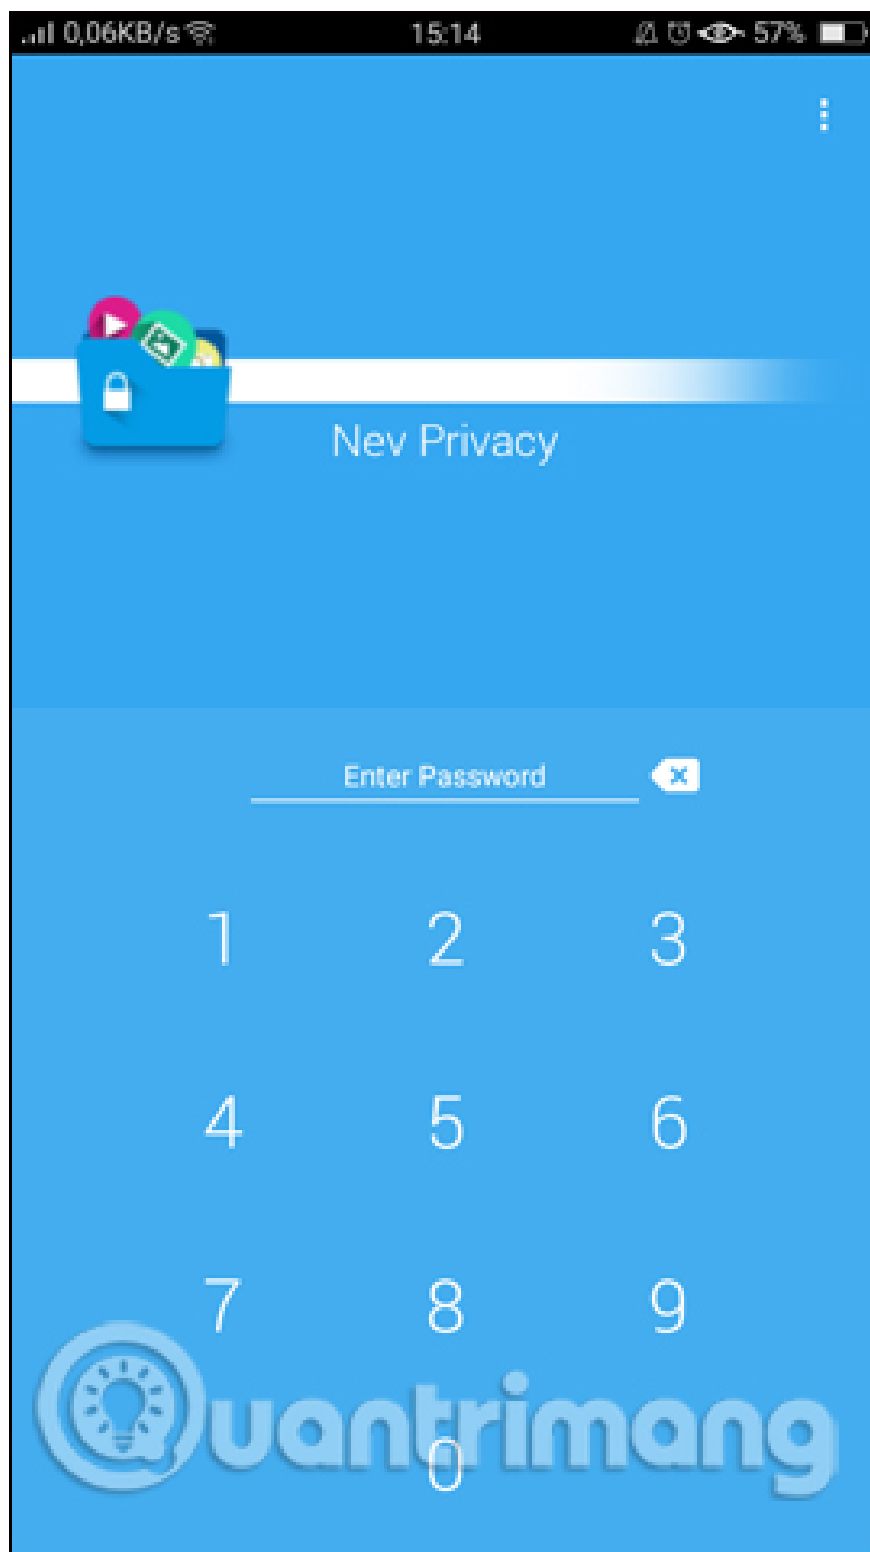

Step 3:

Now try to exit the application and press again. We will be asked to **enter a password if we want to access NEV Privacy** .

So with the NEV Privacy app, you can lock any image, video, application or even the Settings section of the system. **Note to users** , if you delete the application, it is necessary to bring all files that are hidden back to the device. Thus data will not be erased completely from the device.

I wish you all success!
