

How to use Power Saving mode on Telegram

In the newly updated version, users can use Power Saving mode on Telegram without having to register for Telegram Premium.

This Power Saving mode will help save battery life on the phone when we use the application, especially when you open GIFs, videos or animated stickers when messaging on the application. When users make video calls on Telegram, this Power Saving mode also helps you have enough battery to make calls, if the phone is showing low battery. The following article will guide you to use Power Saving mode on Telegram.

Instructions for using Power Saving mode on Telegram

Step 1:

After updating the Telegram application to the latest version, users click on **Settings** at the bottom of the screen. Switch to the new interface, click next to enter **Power Saving mode** .

Step 2:

Here, we will see the Power Saving mode adjustment bar turn on when the phone battery is 15%. We can **adjust this bar to change the battery percentage we want to activate Power Saving mode** on the Telegram application.

The more you pull to the right, the greater the percentage of battery power, the more you pull to the left, the less battery capacity.

Step 3:

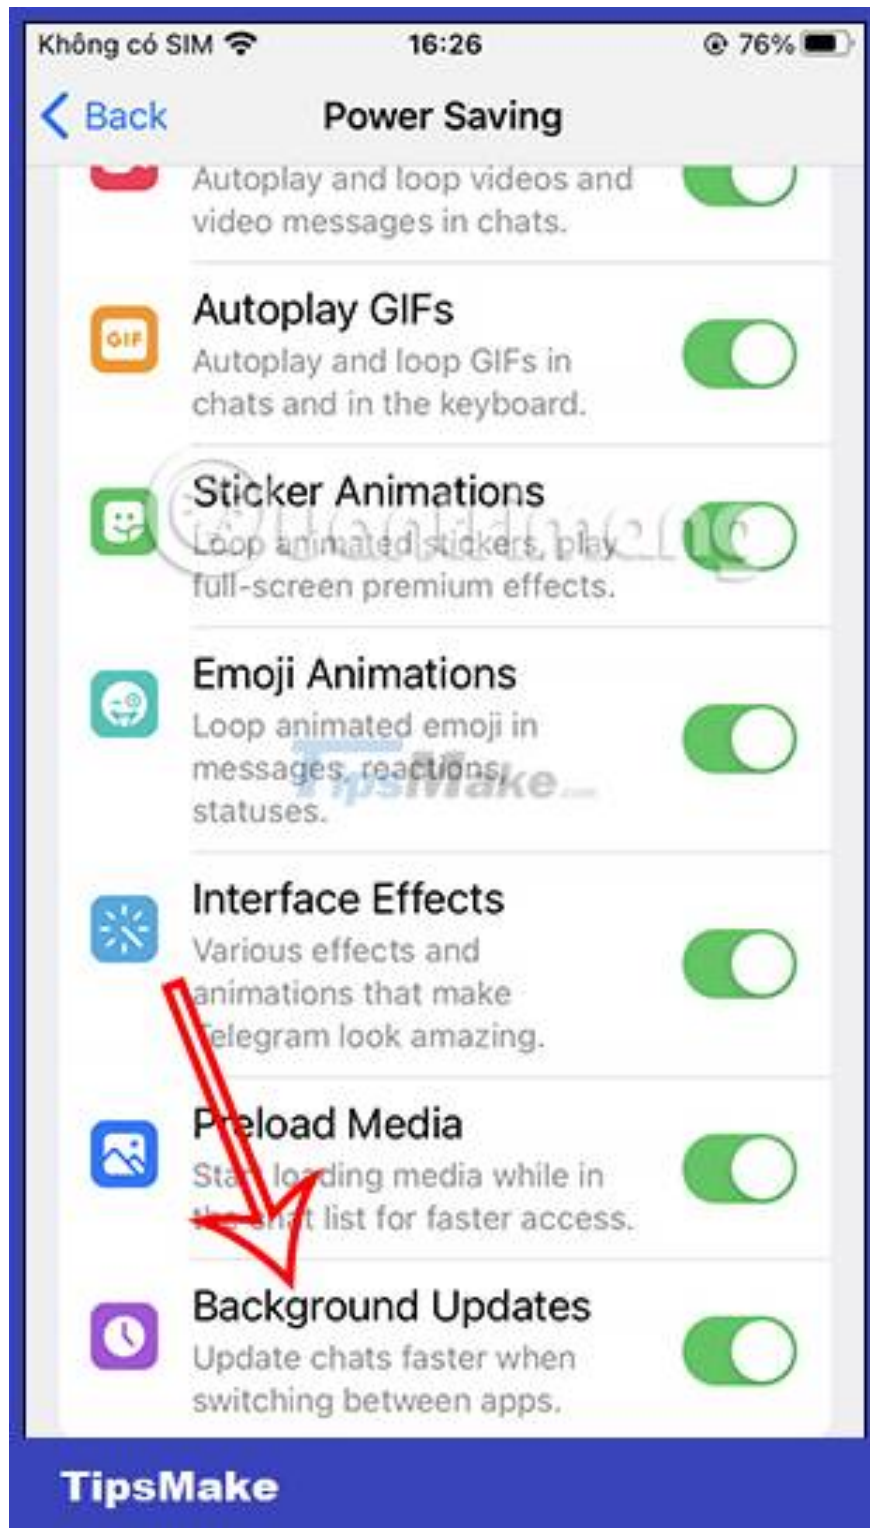

Continue to look down below are options for content on Telegram that want to use this Power Saving mode. You do not want to use Power Saving mode for any content, then swipe to the left to turn it off.

Step 4:

On the Telegram iPhone version, there is also a Background Updates option, which quickly updates the chat content when we switch through the open applications on the application. When you use Power Saving mode on Telegram for this Background Updates content, the message content is still updated quickly when we access the

application.
