4. 4. List of devices that support Samsung Pay
5. 5. List of banks supporting Samsung Pay

1. What is Samsung Pay?

As mentioned above Samsung Pay is an independent, independent payment service from Samsung manufacturer for its devices. Samsung Pay can work on magnetic card calculators, not just NFC (Near-Field Communications).

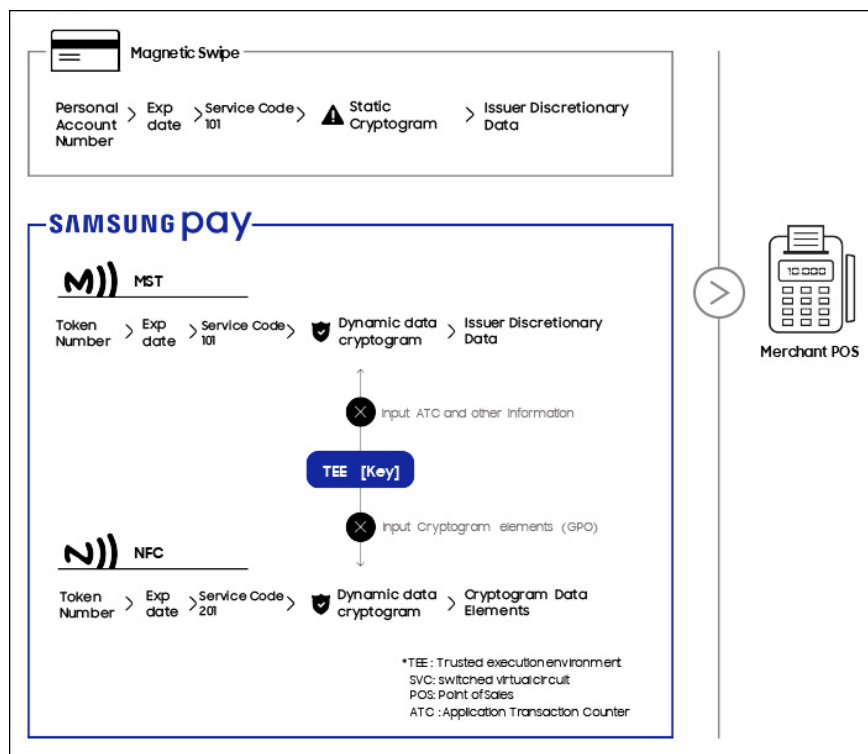

Previously when it was launched, Samsung only supported Samsung Pay on two high-end models: Galaxy S6 and Galaxy Note 5. However, with the needs of users as well as the development of card payment services that today Samsung Pay has deployed more Galaxy A5 and Galaxy A7 versions 2016 - 2017, Galaxy S8 / S8 Plus or Galaxy Note 8. Samsung Pay's operation mechanism is to transmit data by computer (MST) to any type of machine paid by POS card (Point of Sale).

2. Security method of Samsung Pay:

Samsung Pay can be used very widely on many stores because it can operate on card payment machines and NFC-enabled machines. With the ability to use on a large number of stores, Samsung uses **Tokenisation security technology** on the device. This technology will encrypt all user information in 2 steps.

Each credit card information has its own token number consisting of 16 characters, but not a credit card number. Next to each number of tokens will have cryptogram encryption string, provided each time using Samsung Pay. With this method, Samsung has ensured safety when using Samsung Pay.

3. How to add Samsung Pay payment card

To add a payment card to Samsung Pay, follow these steps:

Step 1:

At the list of applications on the device, users click on Samsung Pay application. If not, you can also download it on CH Play. Switch to the new interface and click **Install** to install the application.
