4. How to record a screen with VLC Media Player?

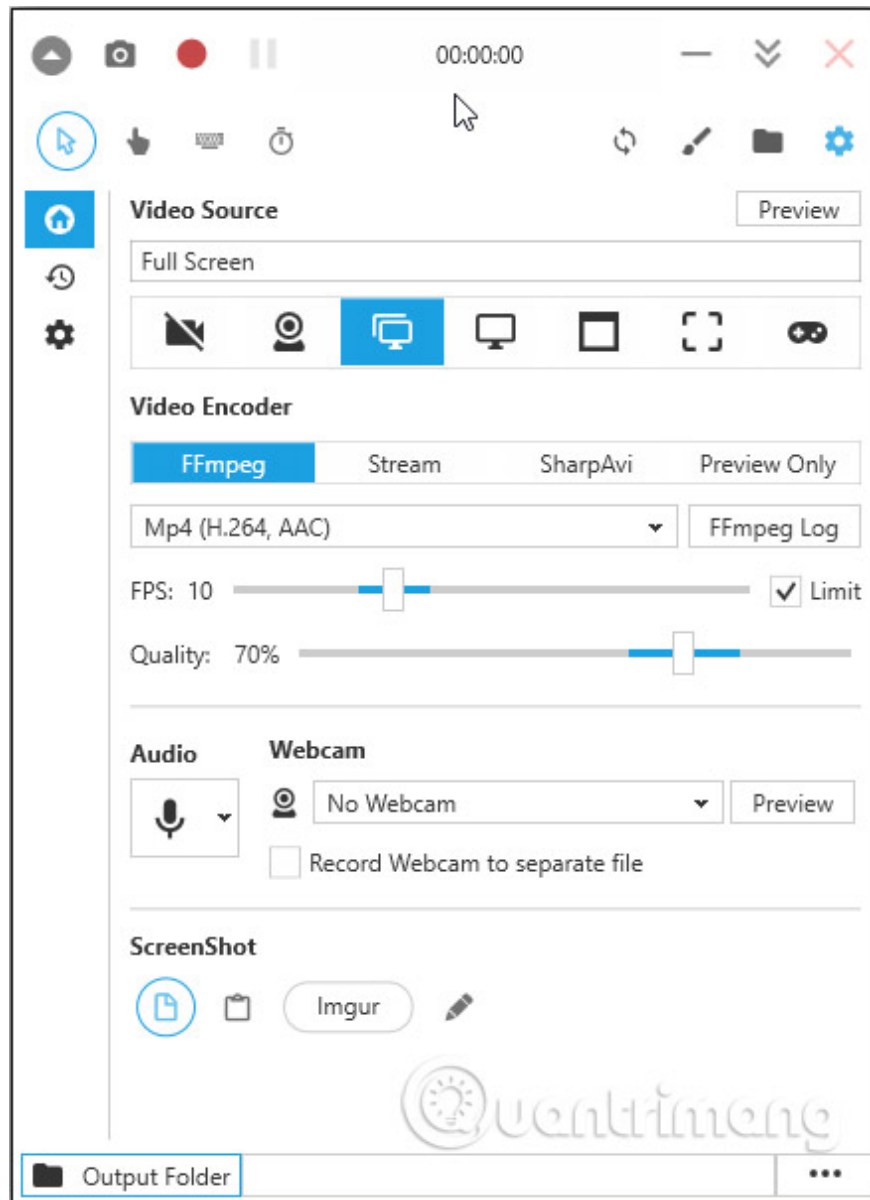

## How to record video, take screenshots of Windows 10

Users click on the link below to download the application and proceed with the installation as usual.

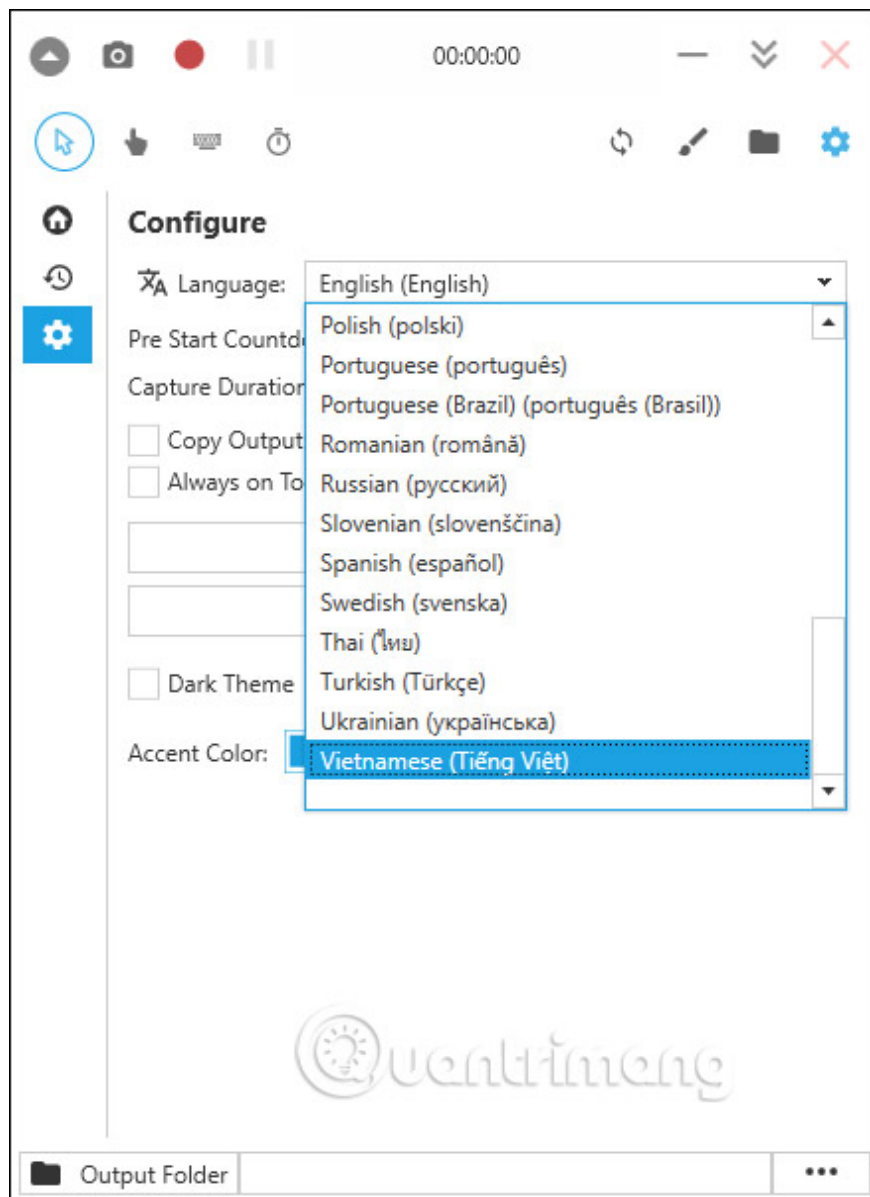

1. Download the Screen Recorder Pro Windows 10 application

Below is the main interface of the application.

To **switch to the Vietnamese language** , click on **the gear icon** in the left toolbar and select the **Language** section and search for Vietnamese to use.

## 1. Record videos on Screen Recorder Pro

### Step 1:

In order to record videos on the application we first need to set up some necessary content.

At **the Video source section** we select the screen content that we want to choose to record video with different icons.

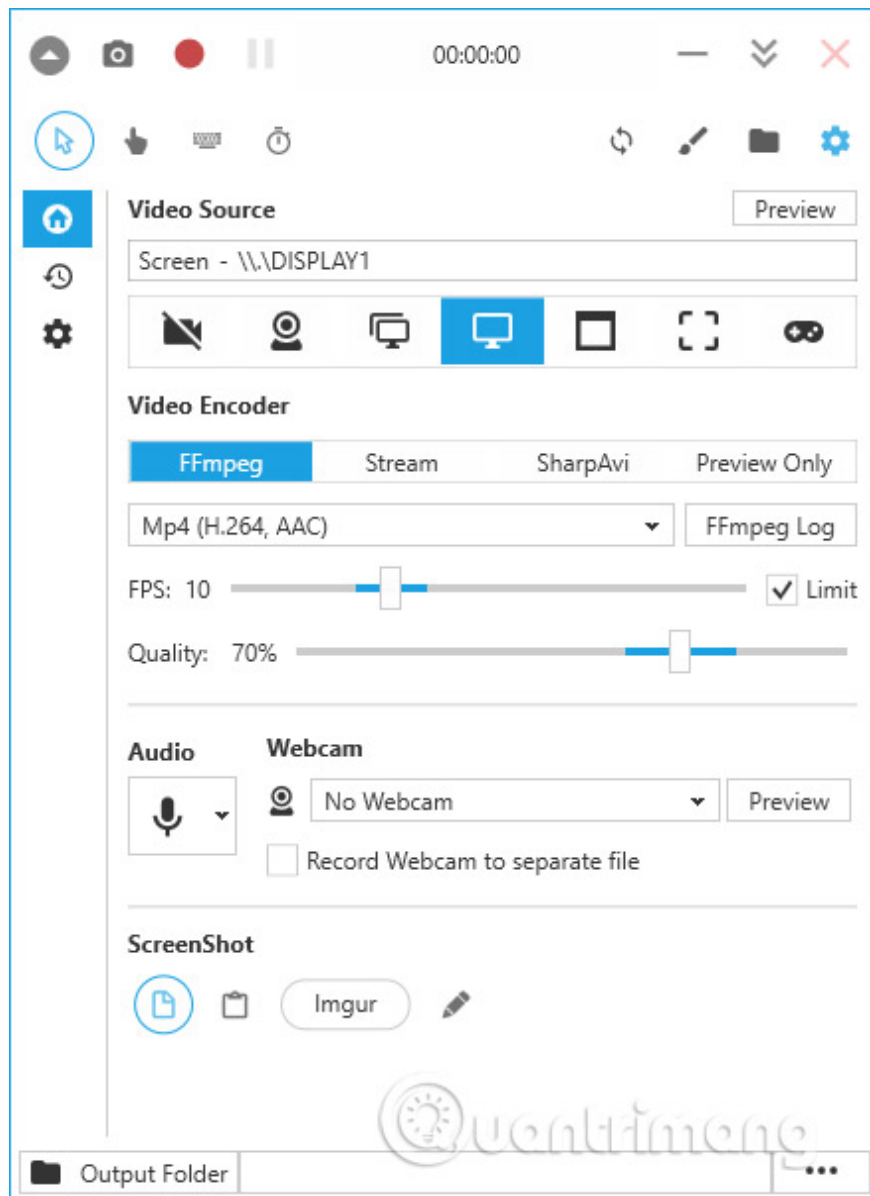

1. Only Audio: Record video only for audio.
2. Webcam: Record video from webcam screen.
3. Full Screen: Record full screen video
4. Screen: Record video from the selected screen.
5. Window: Record video from the application window screen
6. Region: Record video from a selected area.

## 7. Desktop Duplication: Video recording game screen.

At **Video Encoder** the user selects the number of frames / sec format, the quality of the video recorded when saving. At **Audio** select audio recording source.

**The webcam has the** option to turn on and off, preview the captured image from the webcam or choose to save the webcam video into a separate file (Record Webcam to separate file).

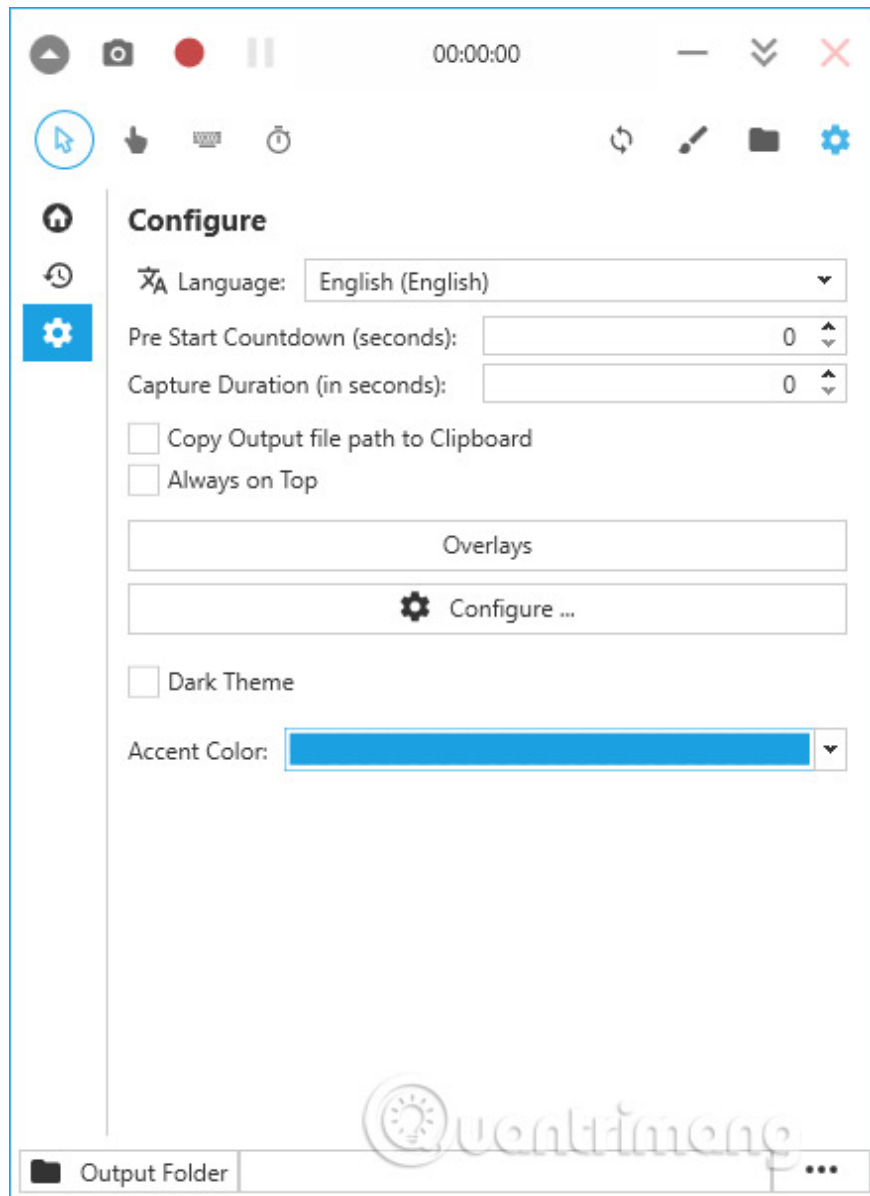

**Output Folder** changes the location of file storage. By default, the image or video recorded on the application is saved in the Documents> Captura folder. Click the 3 dot icon to change the save location.

### Step 2:

Clicking on **the gear icon** will have the option of **Pre Start Countdown** to set the backward time before shooting, **Capture duration** to set the recording time allowed. If you want to add a mouse pointer icon when

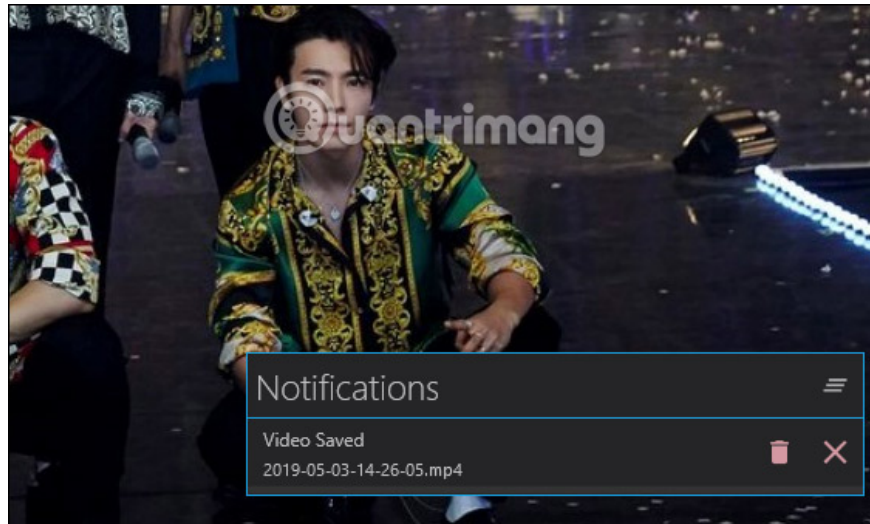

recording a video, click **the Include Cursor icon** .

### Step 3:

After you've selected the content you want to record, click **the red circle icon** at the top of the screen. The shooting process takes place later. While recording, you can press Pause to pause recording and press Stop to stop recording.

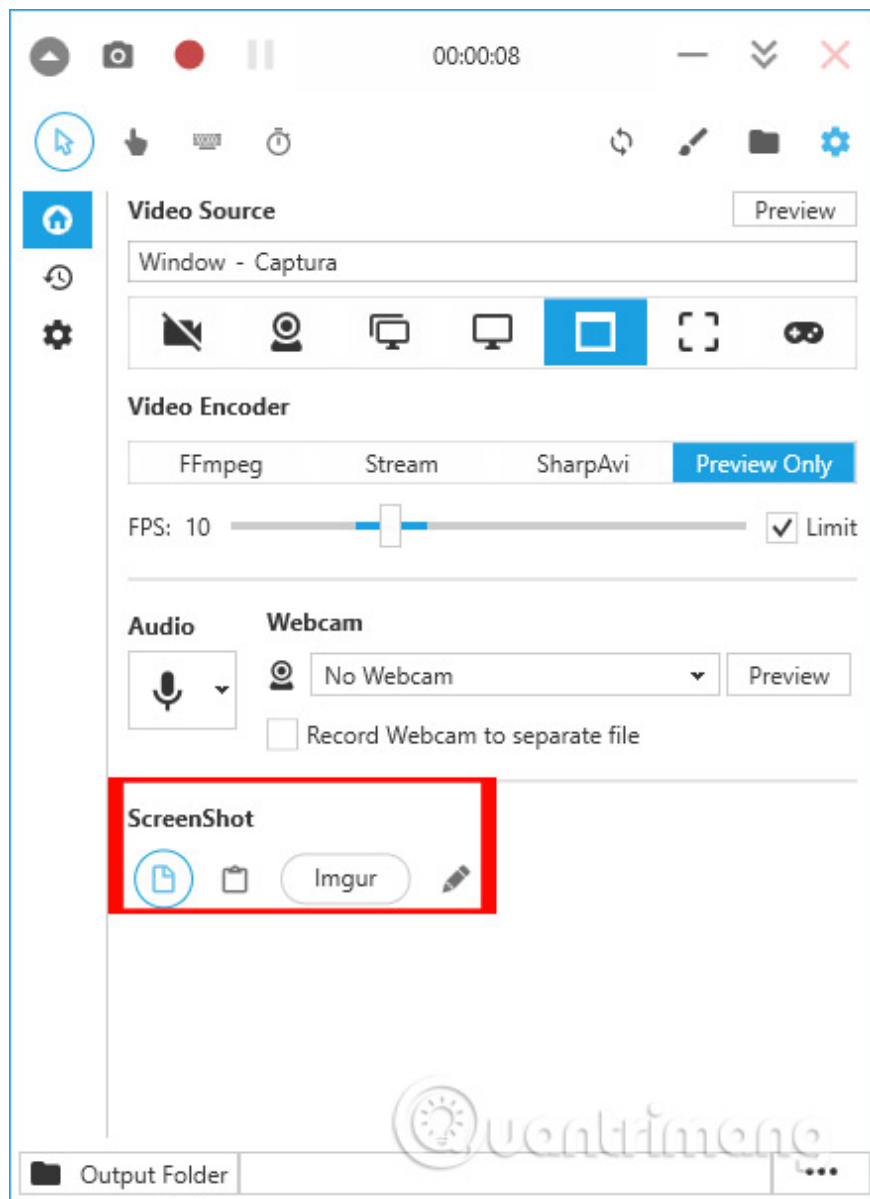

At the end of the recording, on the right side of the screen, a pop-up message will appear as shown below. To access the video, click the notification.

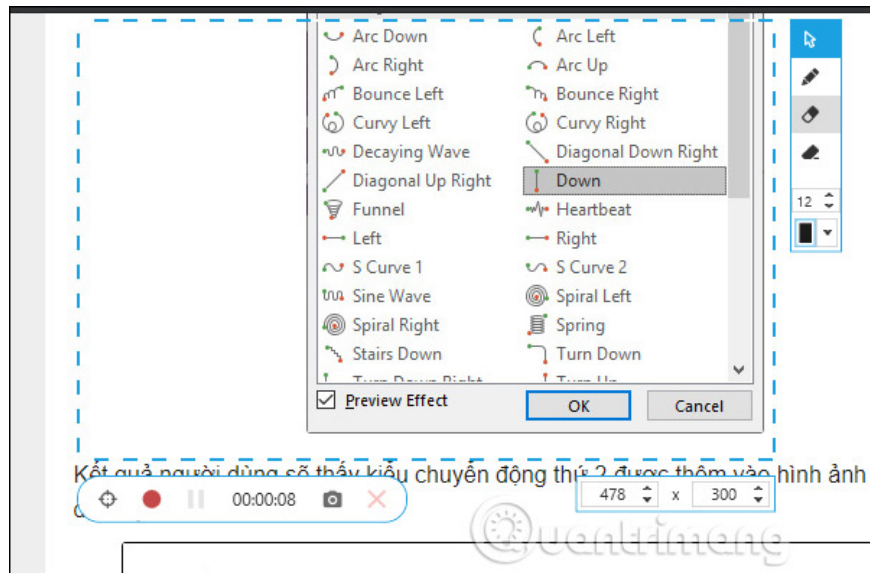

## 2. Take screenshots on Screen Recorder Pro

### Step 1:

To take a photo, the user **first selects the content of the screen** to capture. Next in **the Screenshot section**, select the action after the capture, such as saving to a folder, or editing images. We can choose multiple actions for the image.

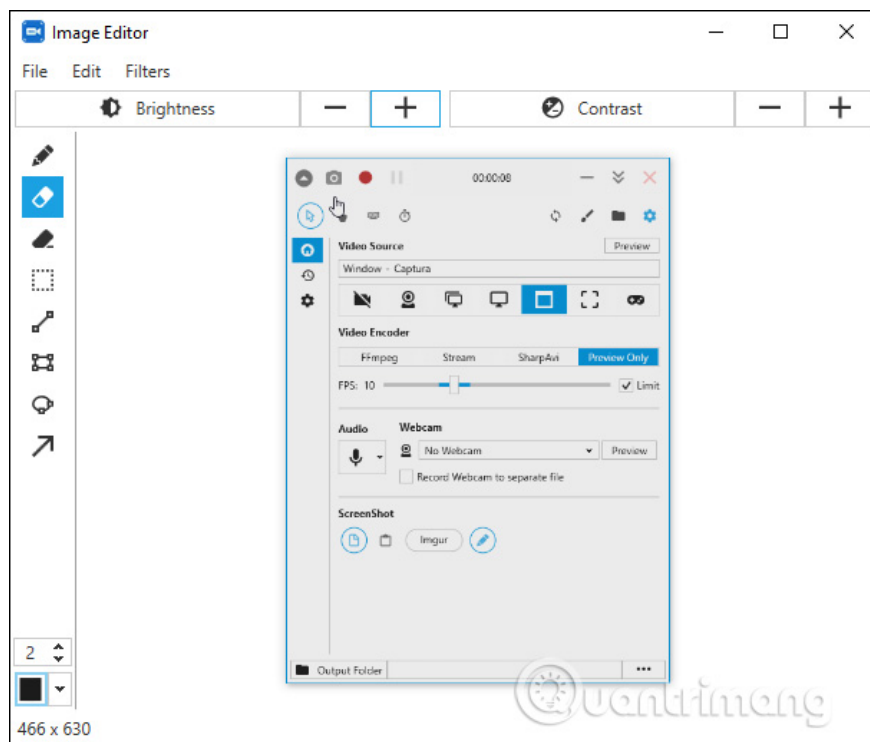

In some options users have added frame size adjustment to capture images. Finally press **the camera icon** to take a picture.

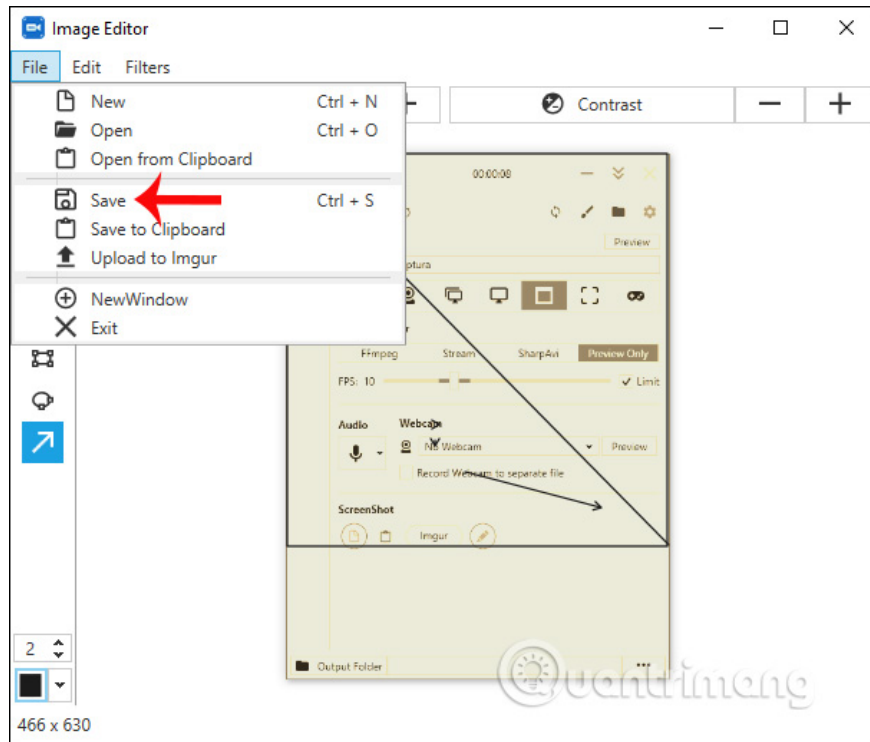

## Step 2:

In the newly edited image interface, we can add strokes, add arrows, adjust brightness or contrast or use filters for images at Filters.

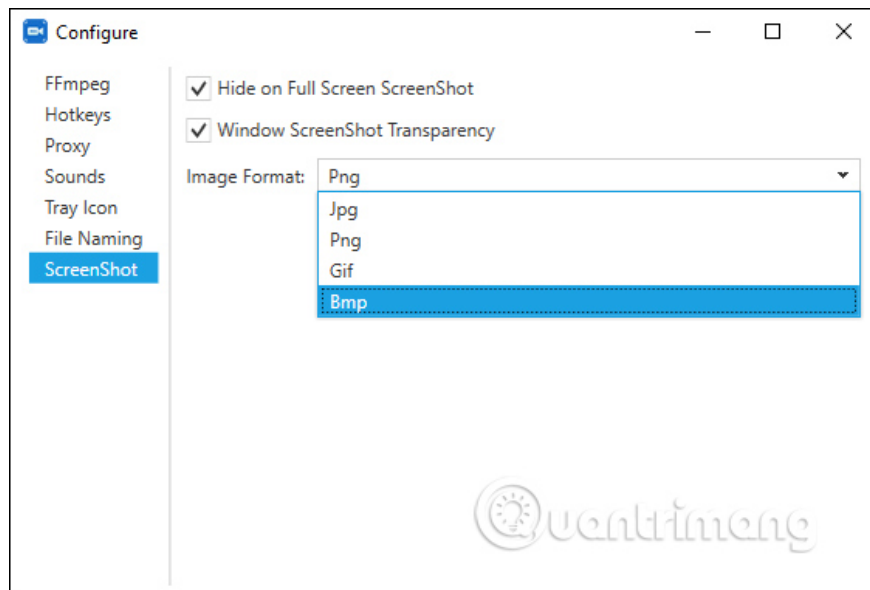

If there are image adjustments, click **File** and choose **Save** to save.

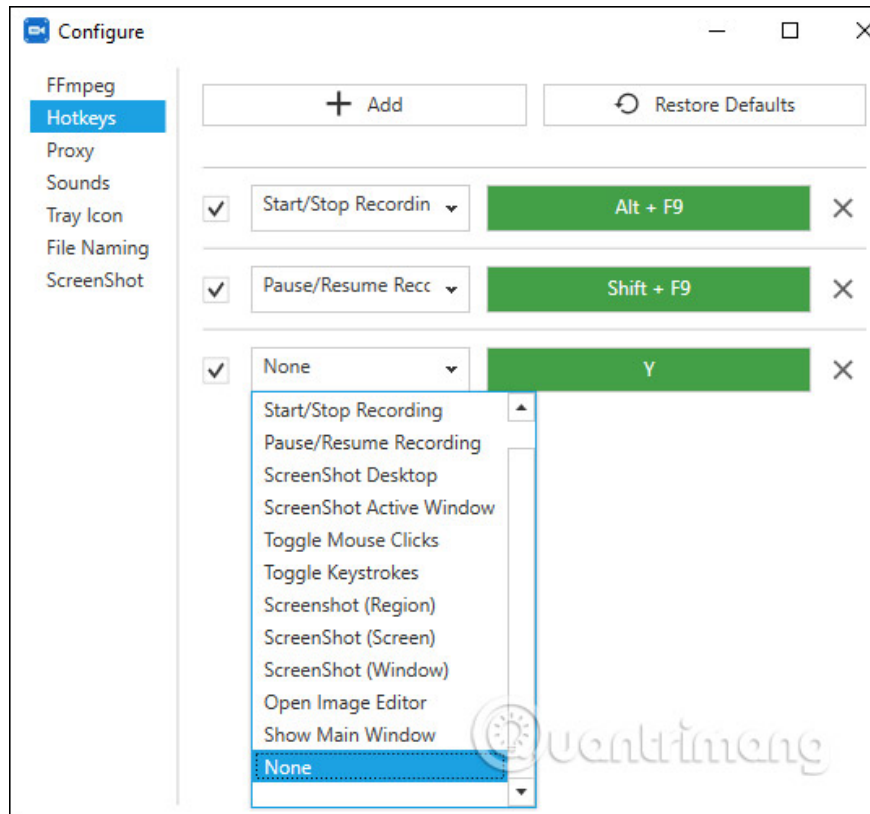

### Step 3:

Screen Recorder Pro images saved by default are JPG, but we can **change the saved image format** to PNG, GIF, BMP if desired. Click on **the gear icon** above the right corner and **select Screenshot** in the list on the left.

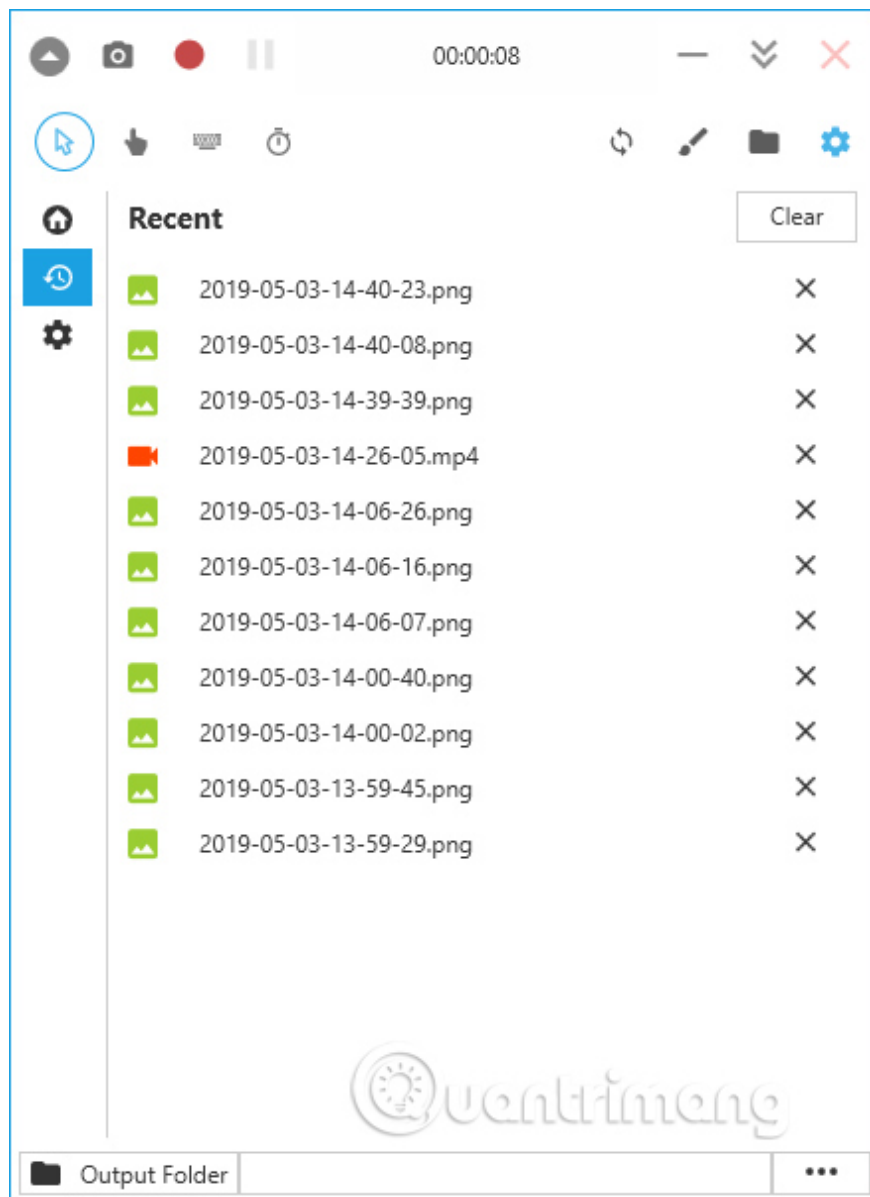

The **Image Format** section **allows** users to select the image format to save.

Also at this Configure interface, we can **create new shortcuts** to record videos or take photos, delete shortcuts already in the Hotkey section. Click Add to add a shortcut and then select the action from the list. Shortcuts you choose. If you want to delete the selected shortcut, press X.

All photos and videos taken on Screen Recorder Pro are saved. Click **the Recent icon** to view the file list. Click Clear to clear the history if desired.

Screen Recorder Pro has a very simple way of using, not too complicated. Users just need to select the content to capture the video, then set some content for the output video and the captured image.

I wish you all success!
