However, to use Sound Booster in the most optimal way, readers need to equip themselves with some skills to manipulate the settings in the software, for example, using Sound Booster shortcuts or how to uninstall Sound Booster in the field. If you don't want to use it anymore.

To access **Settings** and set up Sound Booster, **right-click** on the Sound Booster application icon and select **Settings** as shown in the picture.

And this is the Settings interface of Sound Booster software where you can customize many parameters.

- **Interface Language** : Interface language.

There are 2 language options: English and Russia.

- **Hotkey** : Shortcut key

Customizing shortcuts includes 2 modes: Increase Volume and Decrease Volume. Here users can customize the Sound Booster shortcut key cluster with keys such as Shift, Ctrl, Alt and the F key at the top of the keyboard.

However, you need to be careful not to place the shortcut key combination with the shortcut key cluster of Windows or other software.

- **Other settings**

+ **Startup on Windows startup** : Software startup mode with Windows

+ **Show startup notification** : Notification display mode when starting the software

+ **Automatically check for updates** : Automatically check for new software updates.

After completing the custom settings, click **OK** to confirm.

How to use Sound Booster above is quite simple and you only need to briefly grasp the main functions of the software to easily calibrate and improve the sound when listening through your computer.

In addition to Sound Booster, readers can also refer to how to increase the volume of computer speakers with DFX Audio Enhancer, this is a very high quality sound amplification software for advanced users, so please consider it.
