

How to use the Fast OCR utility to export text in images on Chrome

The Fast OCR utility will help you quickly scan content displayed on any website selected by the user and then convert it to text for users to use for other purposes.

The article below will guide you how to use the Fast OCR utility on Chrome.

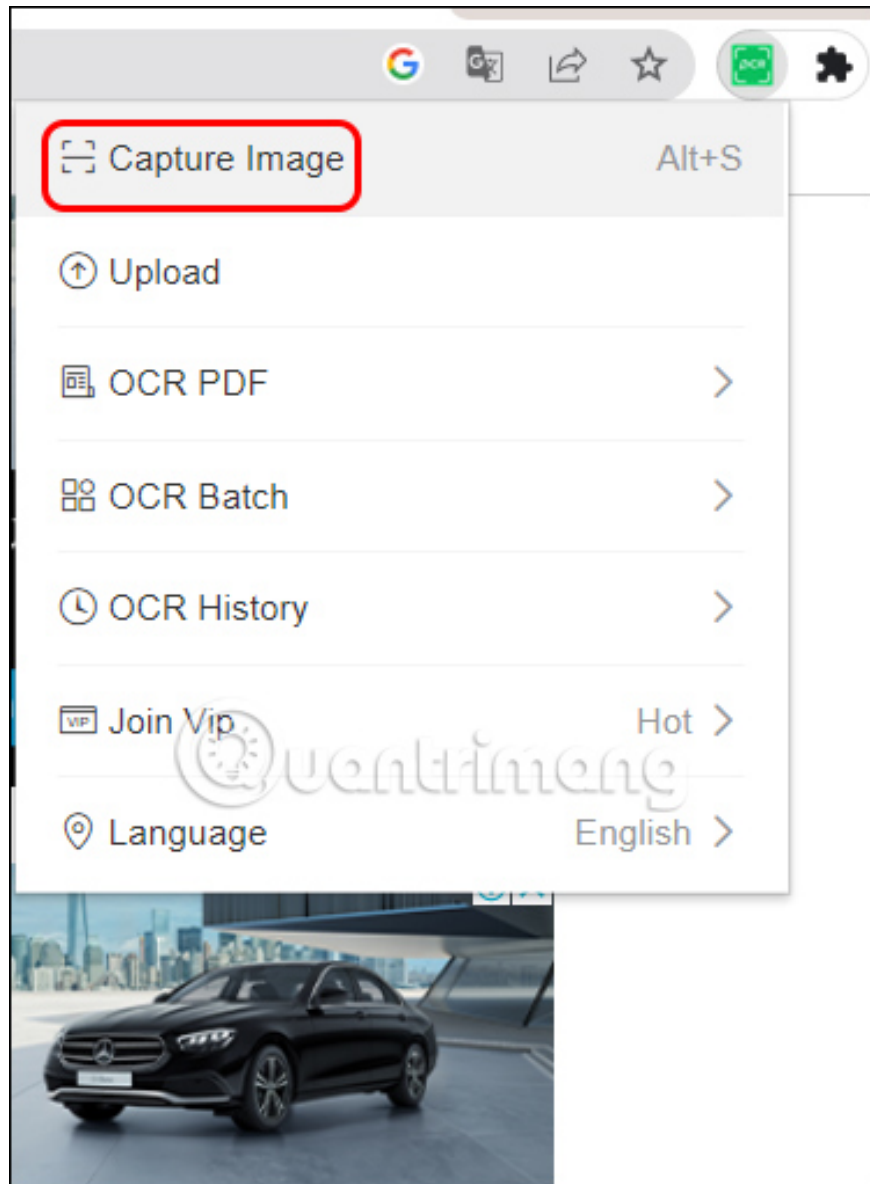

How to export text in photos using Fast OCR

Step 1:

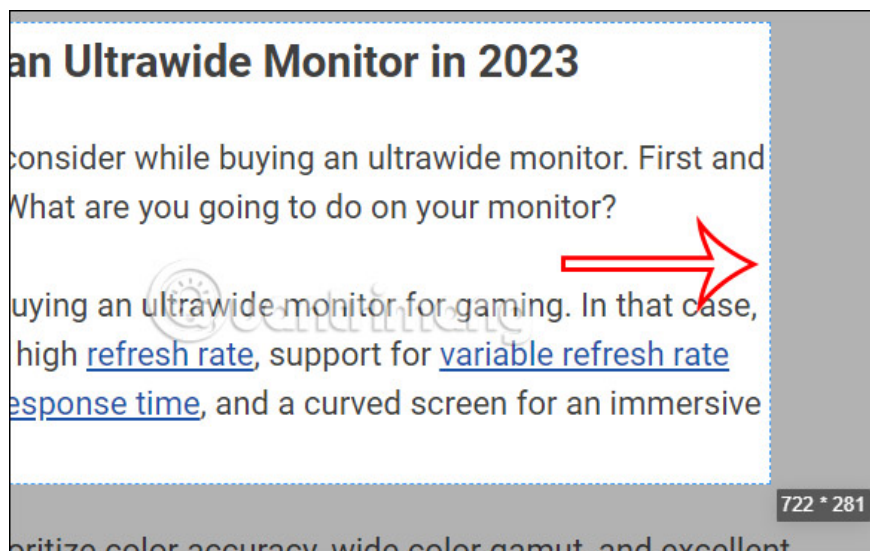

First, we install the Fast OCR utility for Chrome browser according to the link below.

Step 2:

Then we access the website as usual. You find **the content you want to export into text** , then click on **the utility icon and select Capture Image** to capture the image area containing the content that needs to be converted into text.

Now **use the mouse to localize the content** that needs to be exported into text.

Step 3:

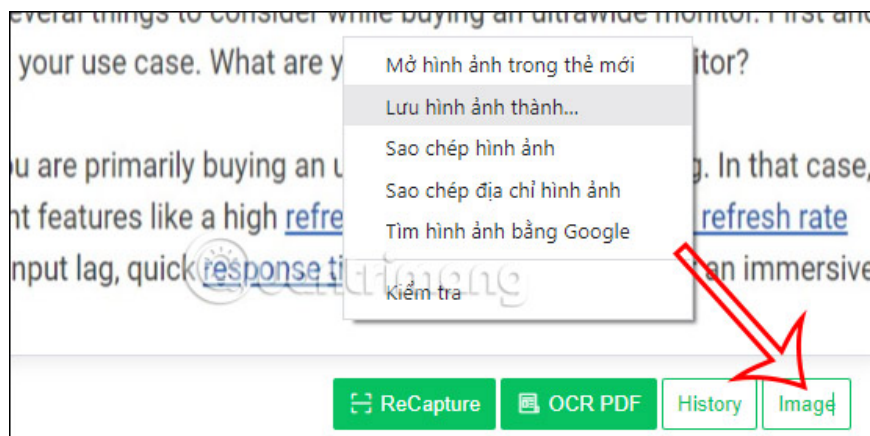

As a result, we will see **the extracted content** displayed in the lower right corner of the screen. You just need to click on **the copy icon** to copy the content extracted from the image.

Step 4:

In addition, when we **click Image**, the content is displayed as an image for us to save in PNG format.

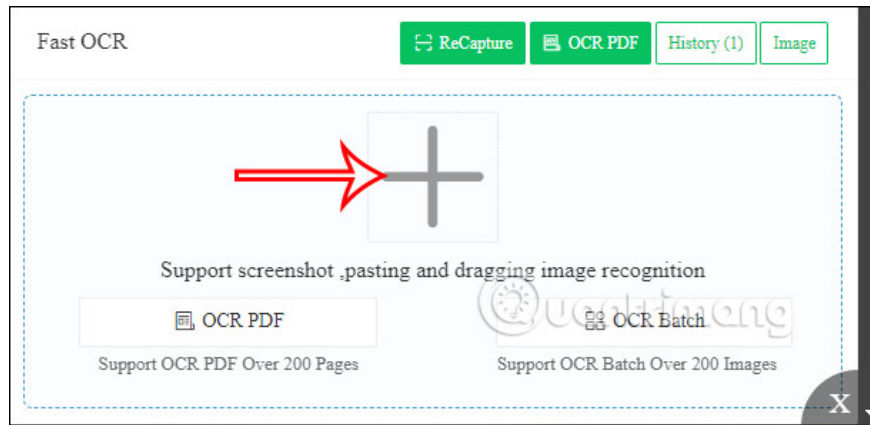

So you have both an image containing content and content extracted from the image to support many different purposes.

Step 5:

When you click on **the utility icon**, you will also see many options to support text extraction. When you click Upload, the bottom edge of the screen displays a number of options.

You can **download an image containing the content you want to export into text**, by **clicking the plus sign** to download the image. Soon you also get the text to use.
