

How to use the FetchV utility to download videos on the browser

On other websites, you can use the FetchV utility to download videos on very simple browsers. When you visit a supported download site, the FetchV utility will immediately video

Downloading videos on websites is now very easy, when there are many online websites that support downloading videos such as downloading videos on Facebook or downloading videos on YouTube. And with other websites, you can use the FetchV utility to download videos on very simple browsers. When you visit a supported download site, the FetchV utility will immediately scan the video and suggest downloading for you. And users just need to click on the download button. The following article will guide you to use FetchV to download videos on the browser.

Instructions for using FetchV to download videos on the browser

Step 1:

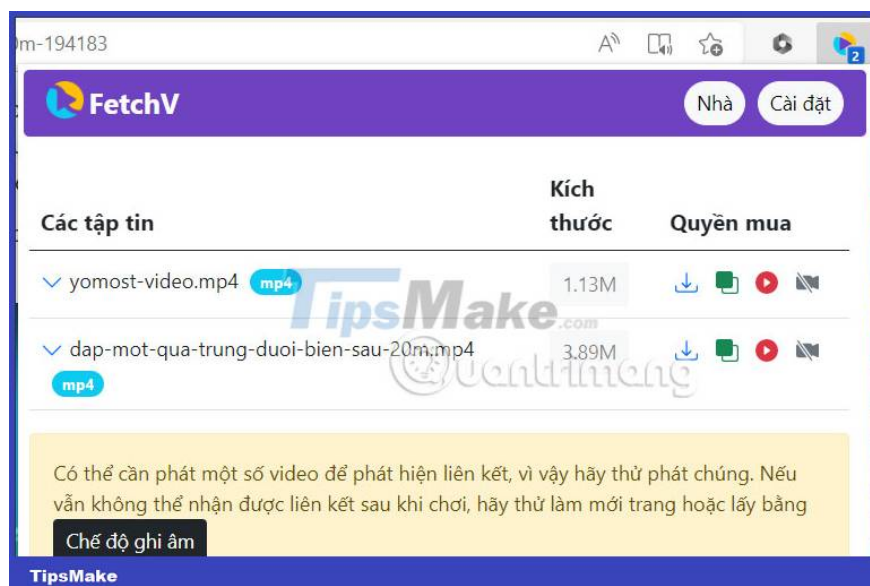

We download the FetchV utility for the browser according to the link below and then proceed with the installation as usual.

Step 2:

After installing the utility, open the website where FetchV supports downloading videos. Note:

1. FetchV does not allow downloads from adult sites.
2. FetchV does not allow illegal/copyrighted content video to be downloaded.
3. FetchV does not support downloading videos from YouTube.

Right at the utility icon you will see the number of videos on the website that the FetchV utility can find. We click on **the utility icon** to see the details of which videos are available. Currently, the utility is capable of capturing many video formats such as M3U8, M3U, MP4, 3GP, FLV, MOV, AVI, WMV, WEBM, F4V, ACC, MKV.

Step 3:

We click on **the download icon** at the video and then wait for the utility to download the video. Now you are transferred to a new interface with the video download process as shown below.

When this download is complete, click **the Save it button** to download it to the browser and save it in the Download folder on your computer.

Step 4:

Click on the utility icon and then click on **the Settings button** to switch to the utility setup interface. By default, FetchV automatically ignores videos below 200 KB, if you want to adjust, you enter the lower limit at Lower Limit.

Step 5:

In the **Filter format group**, you can turn on or off the video format you want FetchV to automatically filter.
