

How to use the FIMO application to take photos of classic film?

FIMO brings classic film photography application with many different film color effects, to bring artistic photos.

The classic film photography effect has always been chosen by many young people, instead of taking photos in a modern style. And of course, in order to get yourself artistic images, you can't help but mention film color capture applications, such as FIMO. The application brings you rich photographic film colors, along with a separate effect with a classic feel. Details such as sunburn, grain breakage, etc. are also included in the application. The following article will show you how to use the classic FIMO application to take photos.

A classic photography guide on FIMO

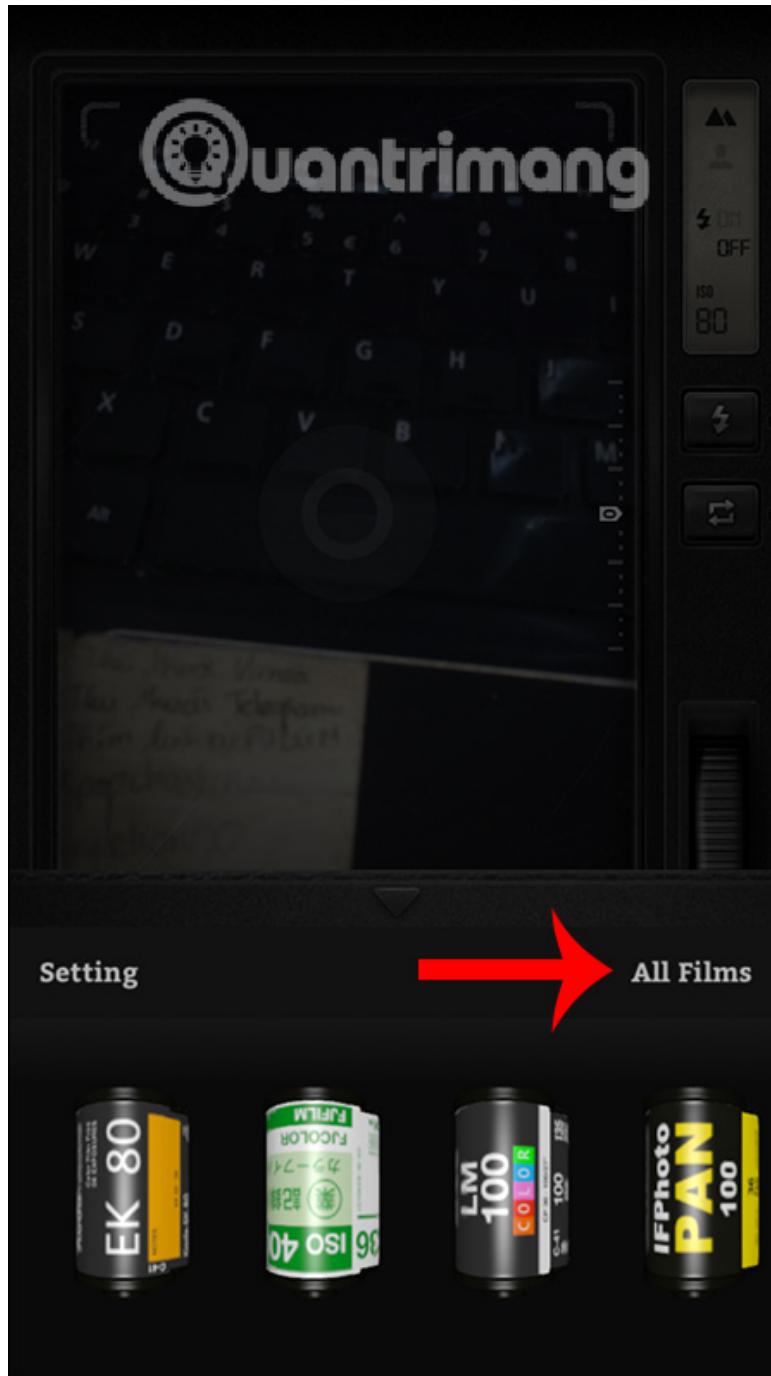

Step 1:

Users download the FIMO application to the phone by following the link below and launch.

1. Download the FIMO Android app
2. Download the FIMO iOS app

When you open the FIMO application interface you will see the interface of a film camera. First of all, the user will choose the film color he wants to use. Click on the **color of the film you're using** and then you'll see more options. Click More or All films to open a list of movie colors. There are both free and paid colors.

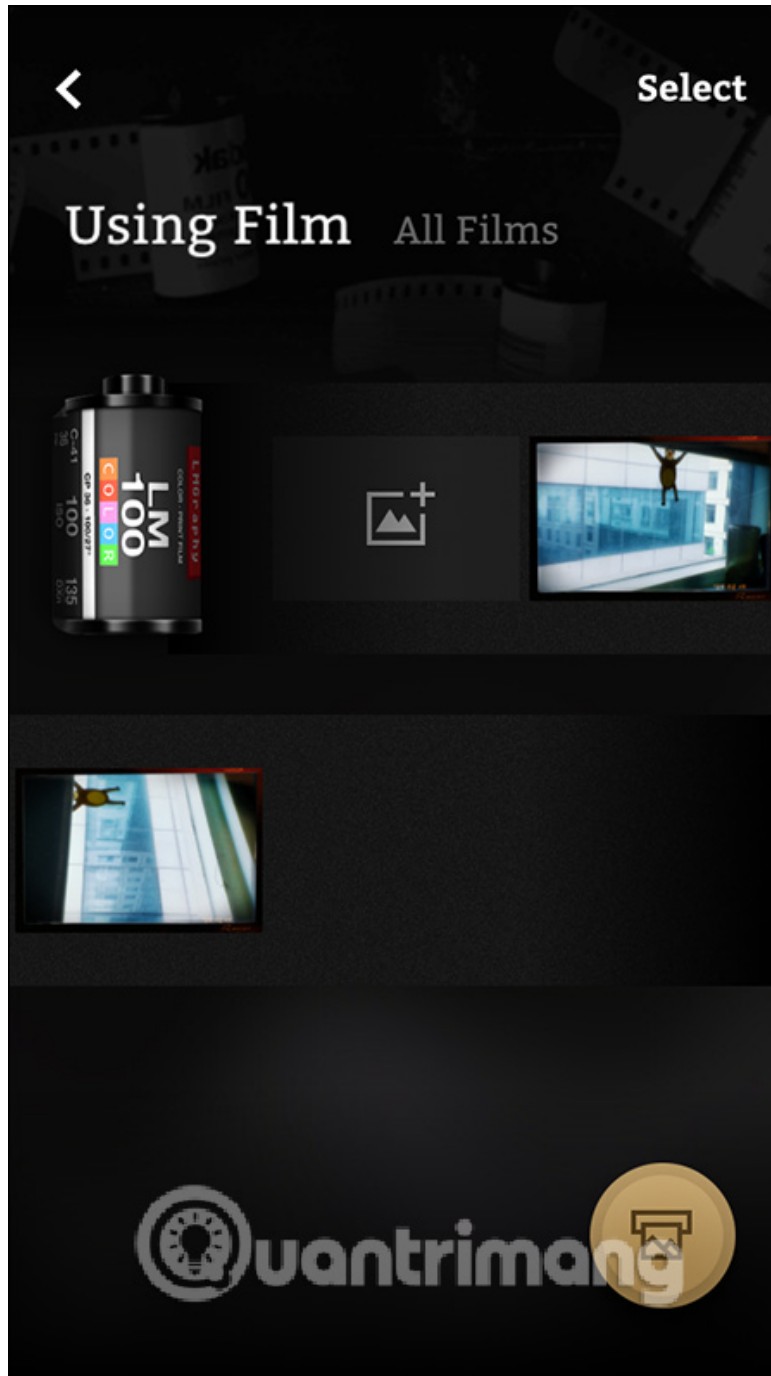

Step 2:

Once we have chosen the color of the film we want to take a photo as usual. If you want to **enlarge or reduce the lens** , use **the adjustment icon** as shown. When taking photos, click **the thumbnail icon to enter the album** . We will then see all the images we have chosen.

Step 3:

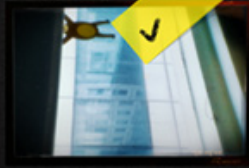

When you click on **Select** and then **select as many images** as you like, the following optional icons will appear. You can share images, download images, delete photos, or create printed images as below. Then the photo will have all the shooting parameters.
