

How to use the maximum screen scan frequency in Windows 10

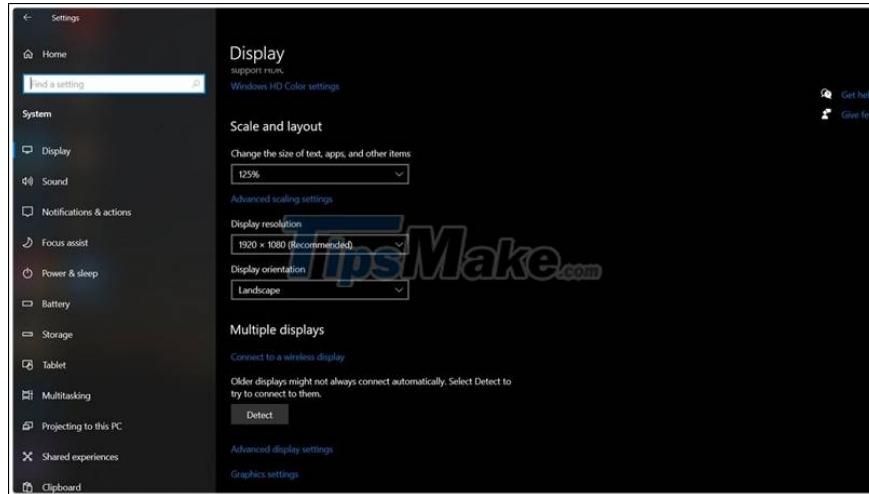

You buy a high-frequency monitor, but your computer only gets 50% of the screen's specifications. Because of this, the monitor I just bought was removed. Don't worry, this article will guide you to change your screen scan frequency quickly.

Instructions on how to change the computer screen scan frequency

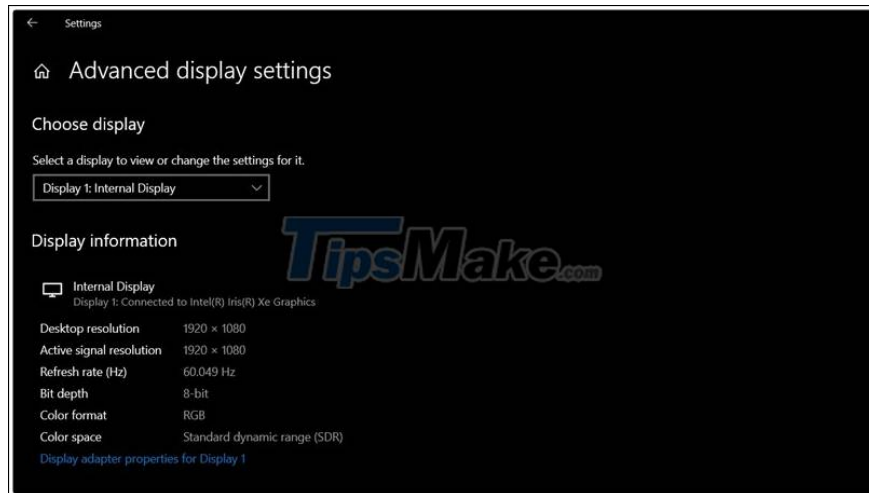

Step 1: Select the Windows + i key combination to open the Setting item on your device. Then, you choose to go to System.

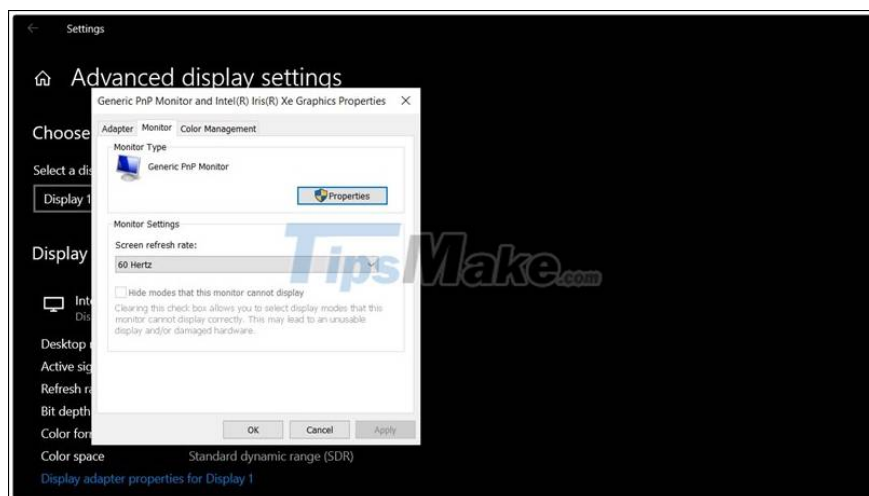

Step 2: You choose to select Multiple display or Display to customize the screen and select Advanced display settings.

Step 3: Continue to find the line Display adapter properties for Display 1.

Step 4: After you choose on the line above, a new window will appear, choose next to Monitor> Screen refresh rate and choose the desired screen scanning frequency. Finally, click Apply and select OK to save.

So you can take full advantage of the screen that you already own. Hope the article is useful to you. Thank you for viewing the article.
