

How to use the split and tip function in Calculator on Apple Watch

Since watchOS 6, Apple Watch has included a native Calculator app, which provides some handy features to find out how much you should tip and how much each person in the group must pay if splitting the bill.

Since watchOS 6, Apple Watch has included a native Calculator app, which provides some handy features to find out how much you should tip and how much each person in the group must pay if splitting the bill.

The steps below show you how to do that. Note that the two features can be used together, but you can also use them independently by selecting 0% tip and changing the number of people or changing the % tip and setting the **People** field to 1.

How to use the bill sharing function and tip calculation on ?Apple Watch?

1. Launch the **Calculator** application on ?Apple Watch?.
2. Enter the total amount of the invoice.
3. Click the **TIP** button in the upper right corner, just to the left of the split button.
4. With the **Tip** field highlighted in green, turn the watch's **Digital Crown** to change the percentage.
5. To split the bill among a group of people, press **People** and then use the **Digital Crown** to change the number (up to **50**).

You will see the total amount below the two fields change to reflect your tip adjustments, and the amount below will vary depending on the number of people split.

Here's another tip: If you don't use the **TIP** function, you can actually change the button on your computer's layout to the standard percent (%) function. Just emphasize on the main computer screen and click on **Tip Function** or **Percent**.

Hope you are succesful.
