## Instructions to convert videos on Video Converter

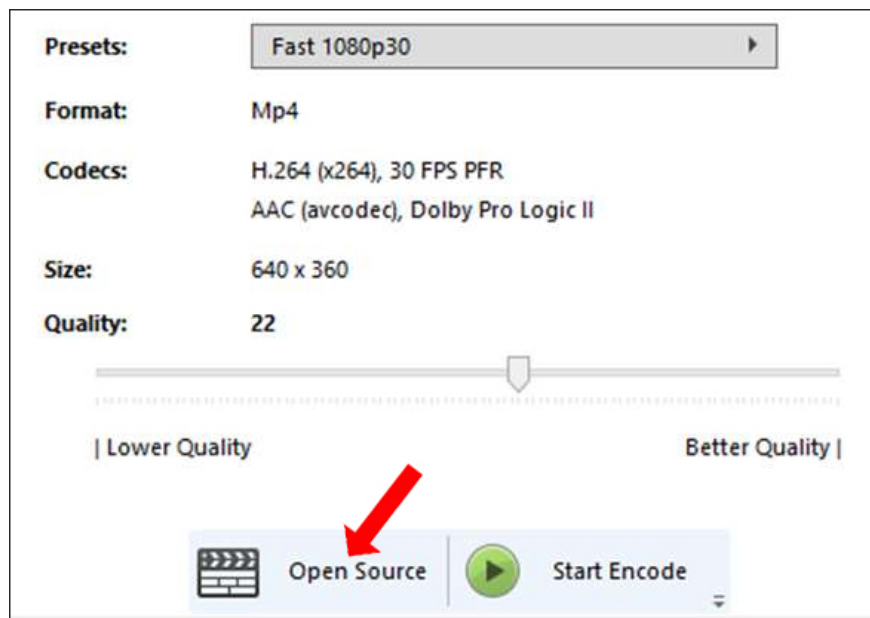

### Step 1:

We download the Video Converter application and install it on Windows 10 according to the link below.

1. Download the Windows 10 Video Converter application

### Step 2:

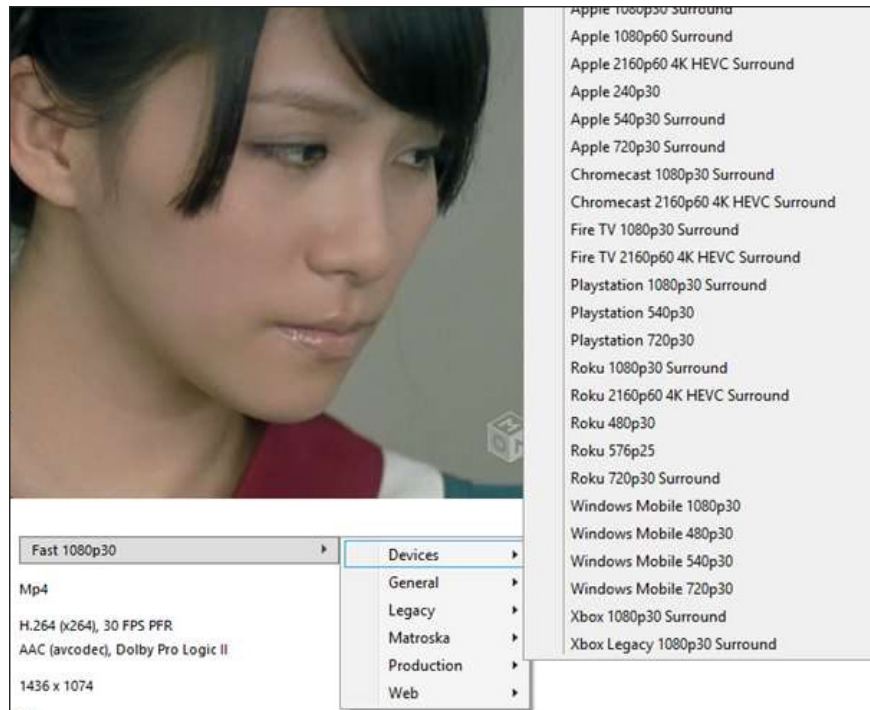

In the interface of the application click **Open Source** to select the video you want to change the format. Users can only select up to 1 video to conduct the conversion.

### Step 3:

After selecting the video, click on **Presets** to set the output quality, with the MP4 format always defaulting to 1080p resolution. You will then see a menu with 6 options corresponding to 6 different format groups for each purpose.

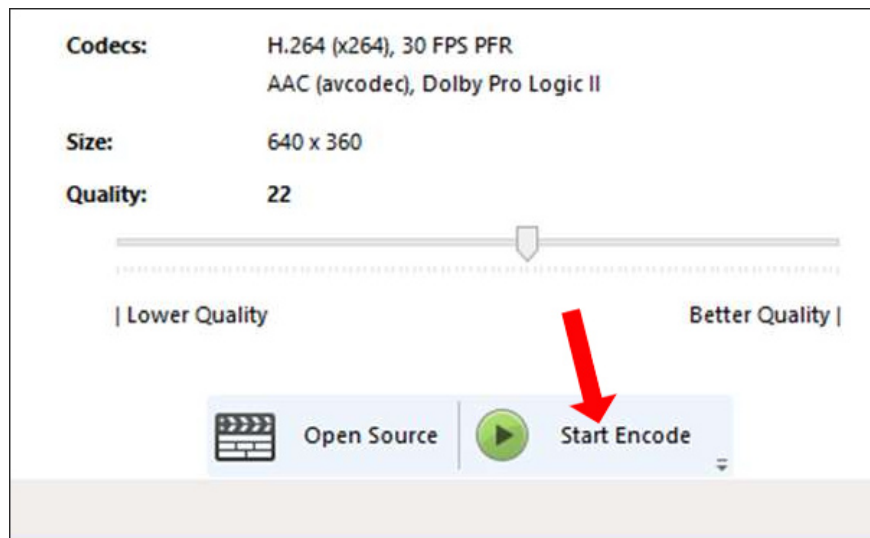

1. Devices: You choose the output format suitable for the device in the list. Support a lot of popular video playback devices like Android, Apple, FireTV, Chromecast, Roku, PlayStation, Xbox, .
2. General: Output format is MP4, there are many resolution options.
3. Legacy: Suitable format on platforms like AppleTV, Android Tablet, iPad, .
4. Matroska: Output format is MKV with multiple resolution options.
5. Production: Output format is suitable for many production standards.
6. Web: Convert the appropriate video when using on YouTube, Vimeo, Gmail.

#### Step 4:

Next, the user adjusts **the quality for the video at the Quality slider** below and then click on **Start Encode** . Name the output file and select the archive folder for the video, finally click Save to proceed with the conversion process.

When the process ends, click Yes to immediately play the video or click No to proceed with the video conversion continue.

Video Converter although only supports 2 output formats for video is MP4 and MKV but the type of device that the application supports is very rich, not to mention the standard of production or presentation on video playback pages. Thus users can conveniently select more video quality formats, serving many different purposes.

I wish you all success!
