

How to use VPN on Opera browser

Opera's PVN feature does not display immediately outside, you will have to find a bit in Settings. The following article Network administrators will introduce basic VPN features on Opera and show you how to use VPN on this browser.

VPN services are becoming more and more popular worldwide. Other popular services like Netflix, Pandora and Spotify only license their content in a limited area and therefore security networks become a threat.

Although Opera web browser is not the most popular browser in the world. Compared to other browsers such as Chrome, Firefox or Microsoft Edge browser, Opera browser has quite a few users. However, the highlight of Opera is the browser which is integrated with the most advanced tools and utilities.

One of them is to integrate free and unlimited VPN services for Opera users on computers. However, Opera's PVN feature does not display immediately outside, you will have to find a bit in Settings. The following article Network administrators will introduce basic VPN features on Opera and show you how to use VPN on this browser.

Features of VPN on Opera

Secure public WiFi connections: if you tend to use points with free public WiFi, VPN will keep you in a safe state, away from man-in-the-middle attacks.

Hide IP addresses : servers, routers and other intermediate elements on the Internet will never know your exact location based on your public IP address as it will be replaced with the IP address of Opera browser VPN server.

Bypass blocked sites at school / office: you can use Facebook, Reddit, and other services blocked on wifi.

How to use VPN on Opera browser

To use Opera browser VPN, all you need to do is enable VPN in browser settings. Then VPN will automatically open and display next to the address bar. To activate VPN, follow the steps below:

Step 1: Download and install Opera

Download the latest Opera browser version.

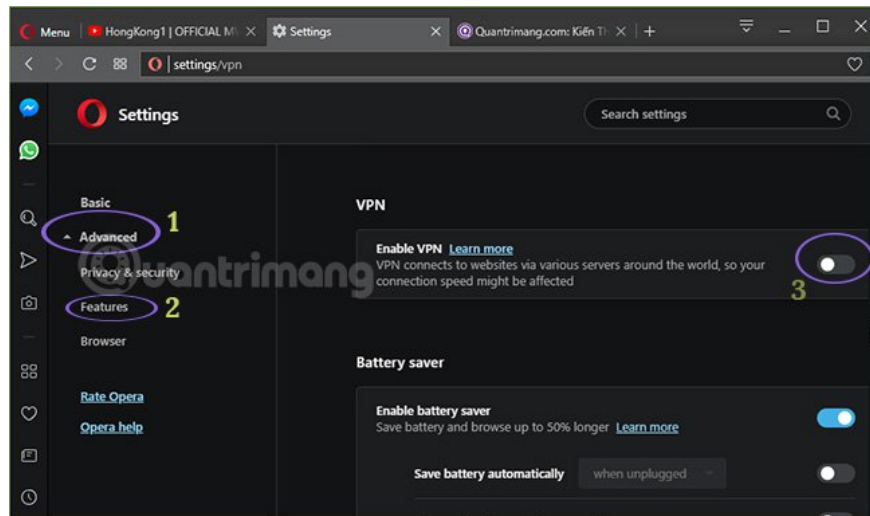

1. Download Opera developer for windows here.
2. Download Opera developer for Mac here.

Open the Opera Installer installation file. Click the **Install** button to begin the process of downloading and installing the developer version of the Opera browser. The process will take a while, fast or slow depending on the speed of your Internet connection.

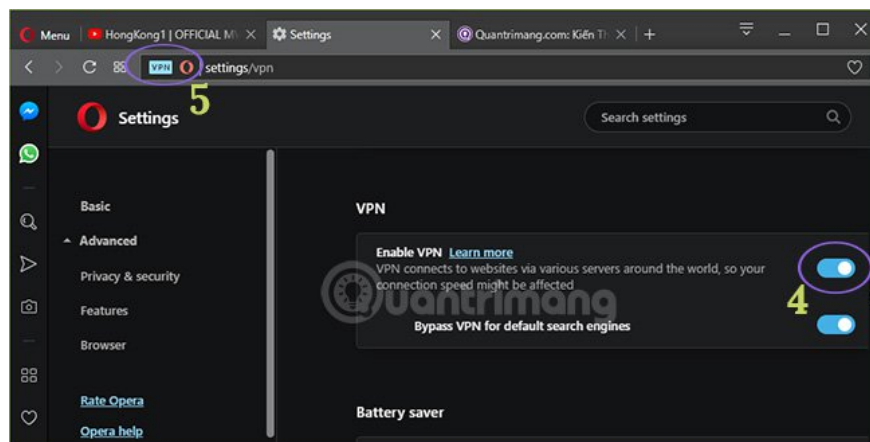

After the download and installation process finishes, proceed to open the browser you just installed.

Step 2: Turn on VPN on Opera

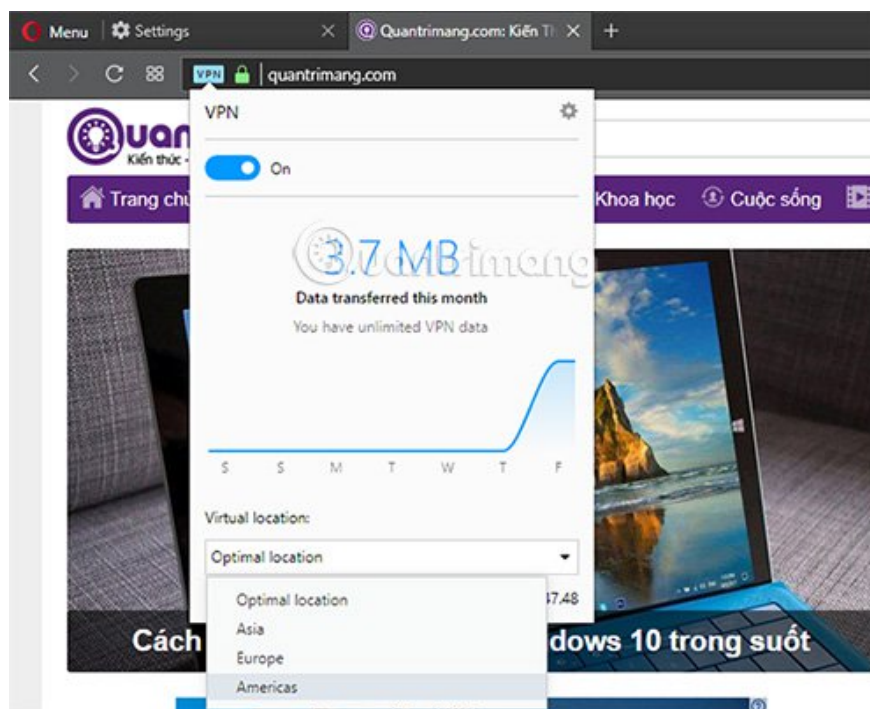

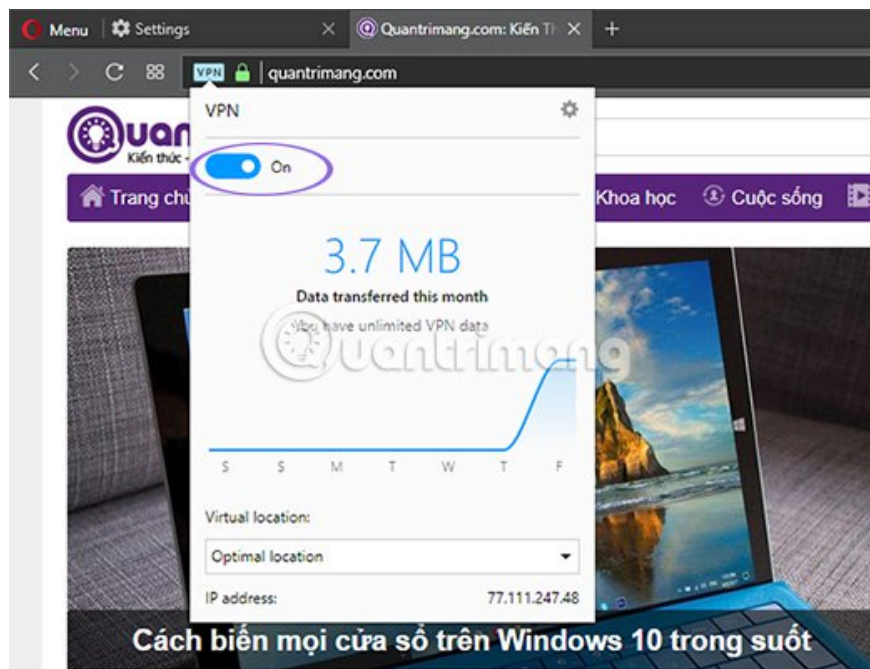

If you are a Windows user, click the Opera button in the upper left corner then click **Settings** > select **Advanced Settings** > select **Features**.

Here you will see the VPN option, in the **Enable VPN** box, click on the right-hand button to activate free VPN integrated in Opera web browser.

From now on when you open your browser or open a new tab on Opera browser, you will see a green VPN button on the left side of the address bar. When you click on the VPN icon, you will see the amount of data used over the VPN in the month, the IP address. Click on Virtual location to change virtual locations if needed.

You can click on the VPN icon > click On to turn off VPN when needed. If disabled, the VPN button will be gray.

Opera's integrated VPN is quite basic and simple to use. It helps you fake IP and see the content is limited geography.
