Instructions for using Wandriver update driver

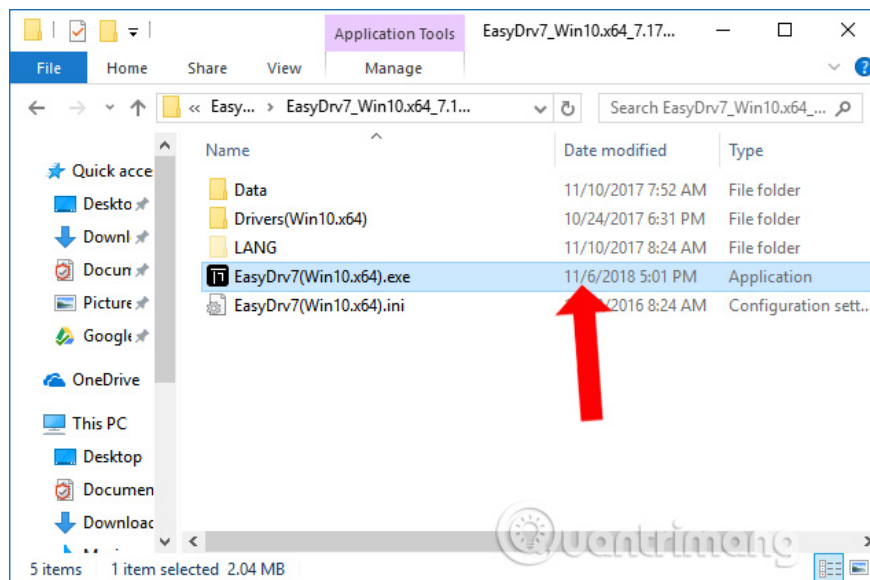

Step 1:

Click on the link below to download Wandriver file for your computer. The software has 32-bit and 64-bit versions to install for Windows 32-bit or Windows 64-bit.

1. Download Wandriver software

Step 2:

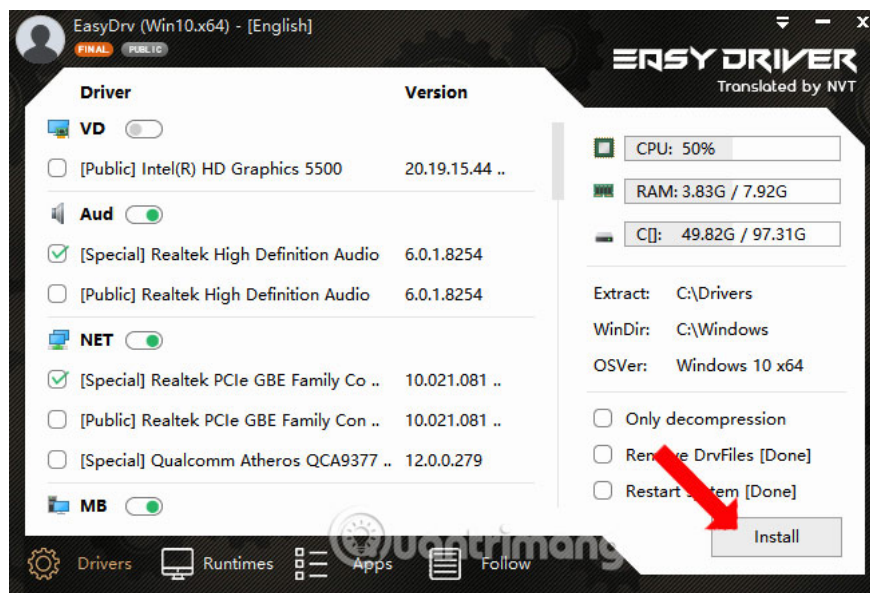

After extracting the downloaded file, click on the file to install the software.

Below is the main interface of the software. At this interface you will know what the current RAM parameters are, CPU information and the capacity of the C drive in use.

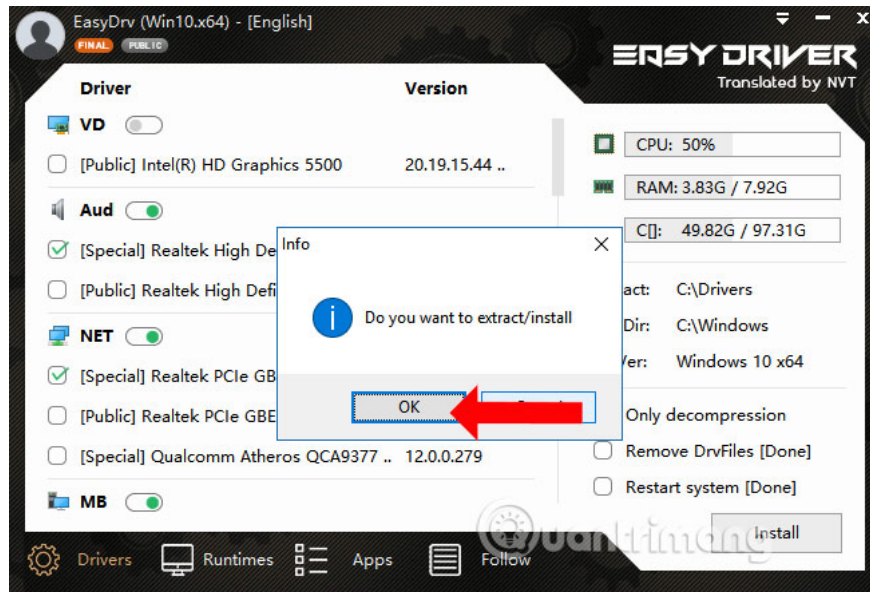

To update the driver click **the Install button** . In addition, we will have a number of other options including:

1. Only decompression: Only unzip but not install the driver.
2. Remove DrvFiles: Delete the Driver installation file after it is completed.
3. Restart system: Restart after installing the driver.

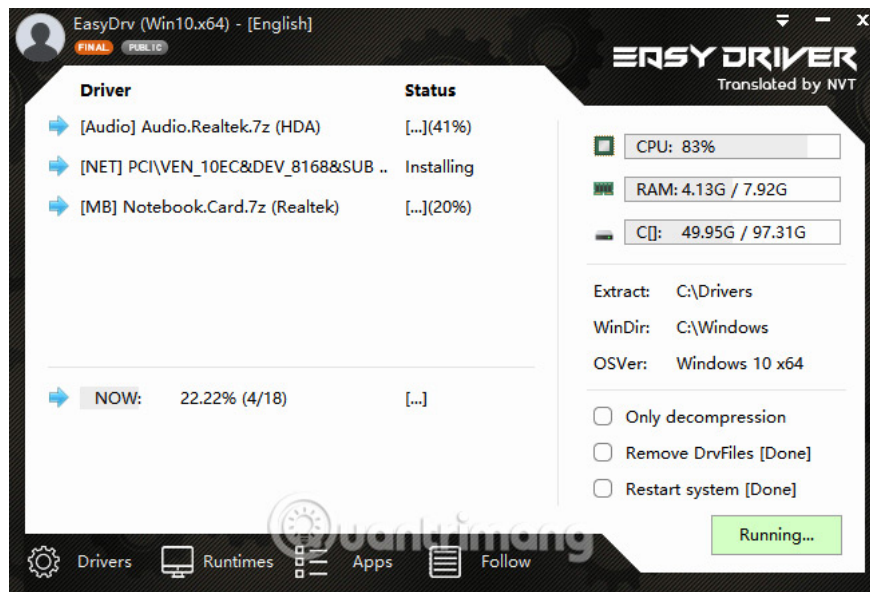

Step 3:

Then the user needs to press the OK button to agree to update the driver.

The process of updating the computer driver will take place shortly after. The software will automatically search as well as the latest version for the drivers on the computer.

When the successful driver update process on the software interface will display the **driver installation is complete message** and the software interface will automatically exit. If there is a check to auto-restart the system, the computer will restart later.

Updating Wandriver's driver is extremely easy. Any search for the latest driver version to update the driver will be done quickly with just a few simple clicks.
