

# How to use Weafo to transfer files between iPhone and computer

To transfer data between iPhone and computer, we can use Weafo application without the usual cable.

To transfer data from computer to iPhone and vice versa in the usual way will need cable and iTunes. However, there are many applications that support simple data sharing, such as Weafo.

Weafo will support you to share data from images, music, to Word documents, zip files from your computer to iPhone without the need for a cable, or perform complicated connection steps. We can get files back and forth between two simple devices and fast file transfer speeds. The following article will guide you how to share files from computer to iPhone using Weafo application. During the data transfer process you do not turn off the Weafo application.

Send and receive files between your iPhone and any nearby

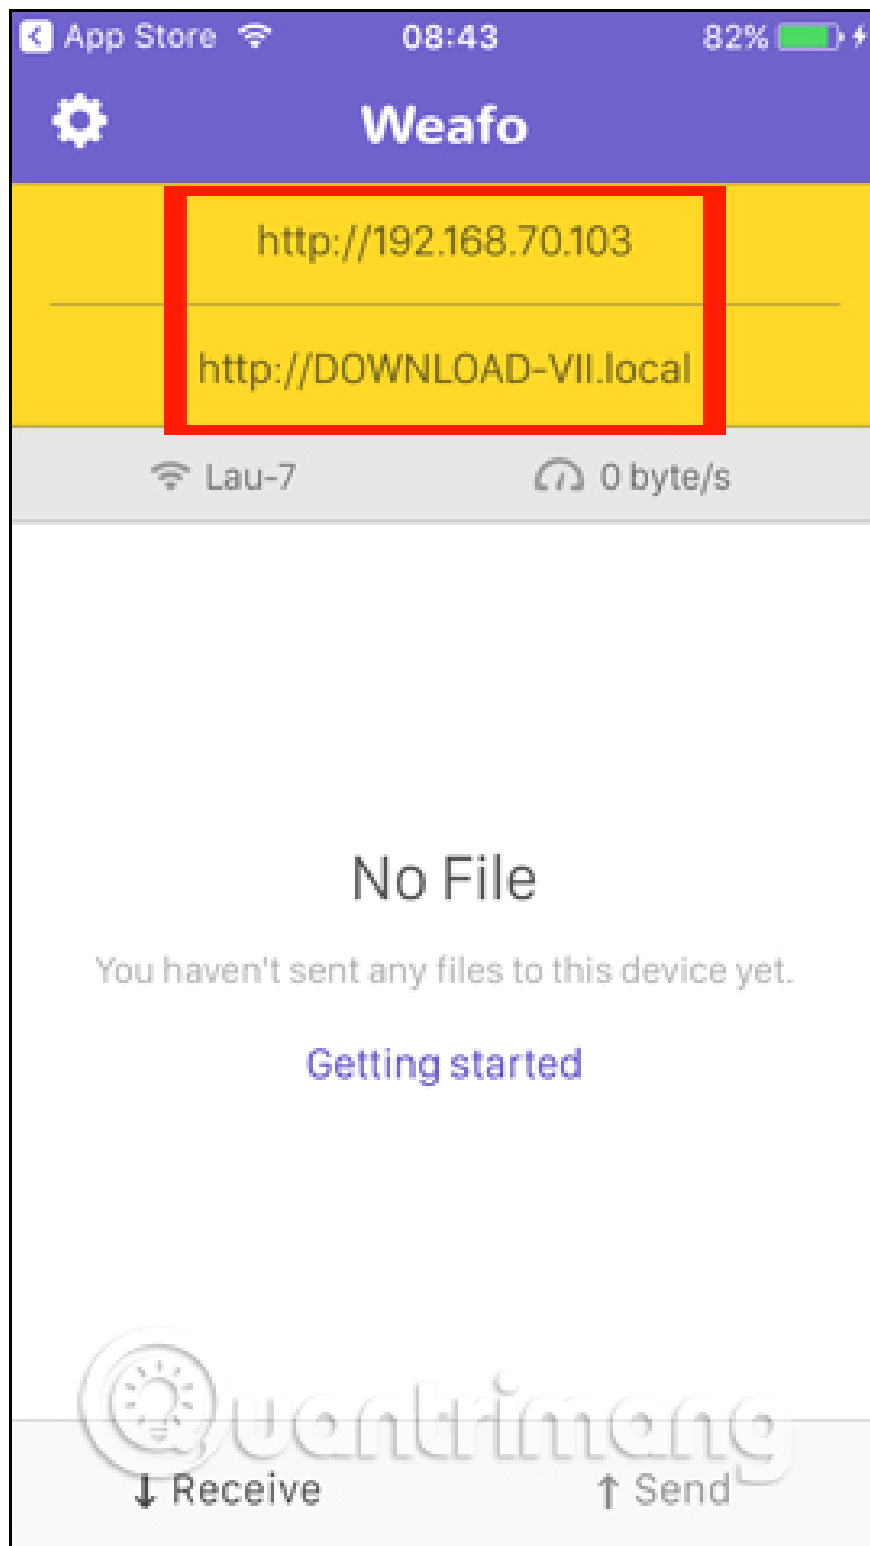

device with 2 easy steps:  
 **Quantrimang**

**Step 2:**

Below is the main interface of the application. We will see a connection address for the device and the computer via the IP address of the connection network. Users can use the IP address provided in the interface or URL based on the iPhone name.

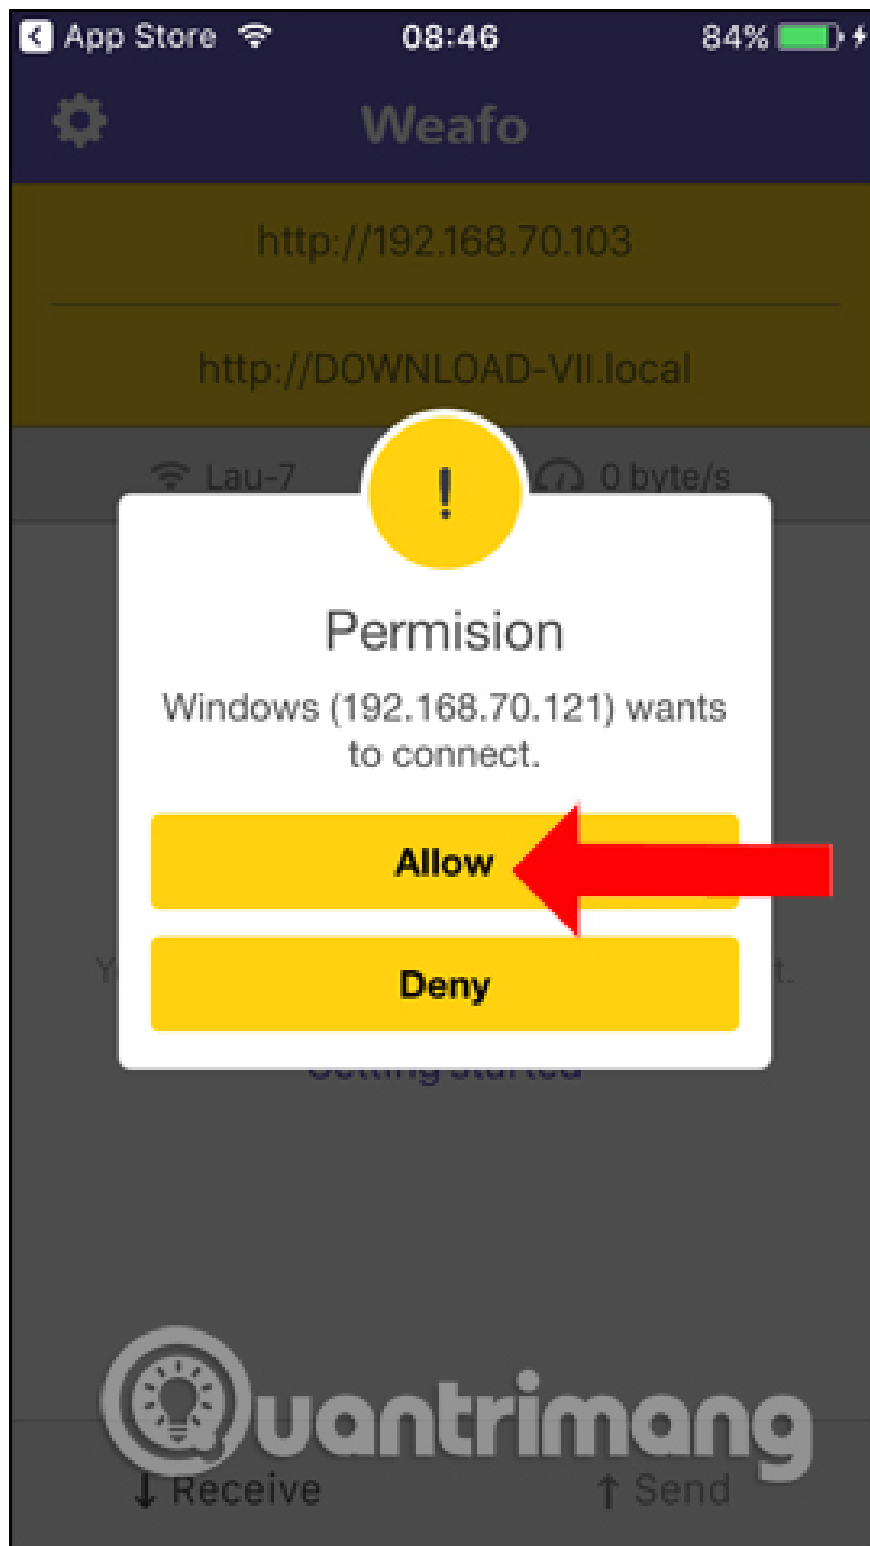

**Step 3:**

Open the web browser on your computer and **enter the IP address** provided by Weafo.

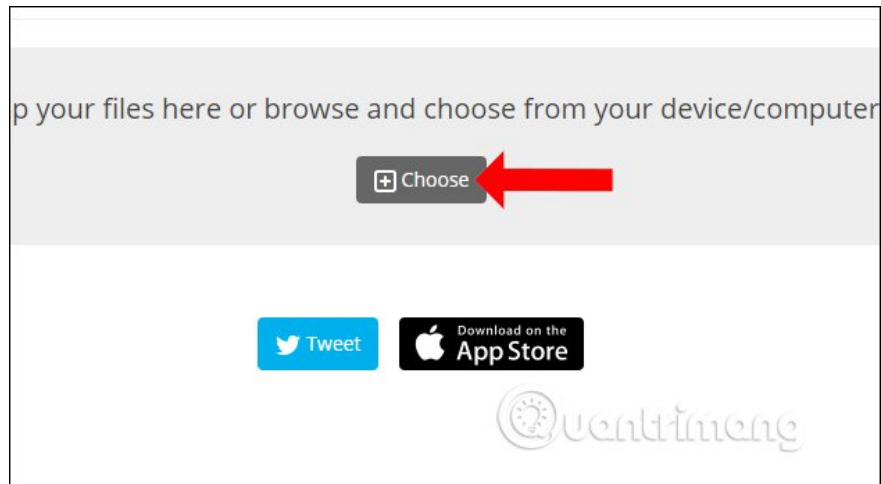

At this time, the iPhone application interface will appear to allow the computer to access the device, click **Allow** to agree.

**Step 4:**

Go back to the **Weafo** interface **on the computer** to see the message to receive and send data. Click **Choose** to select the data you want to send. Note we only have 1 data to upload to Weafo.

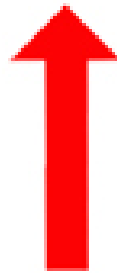

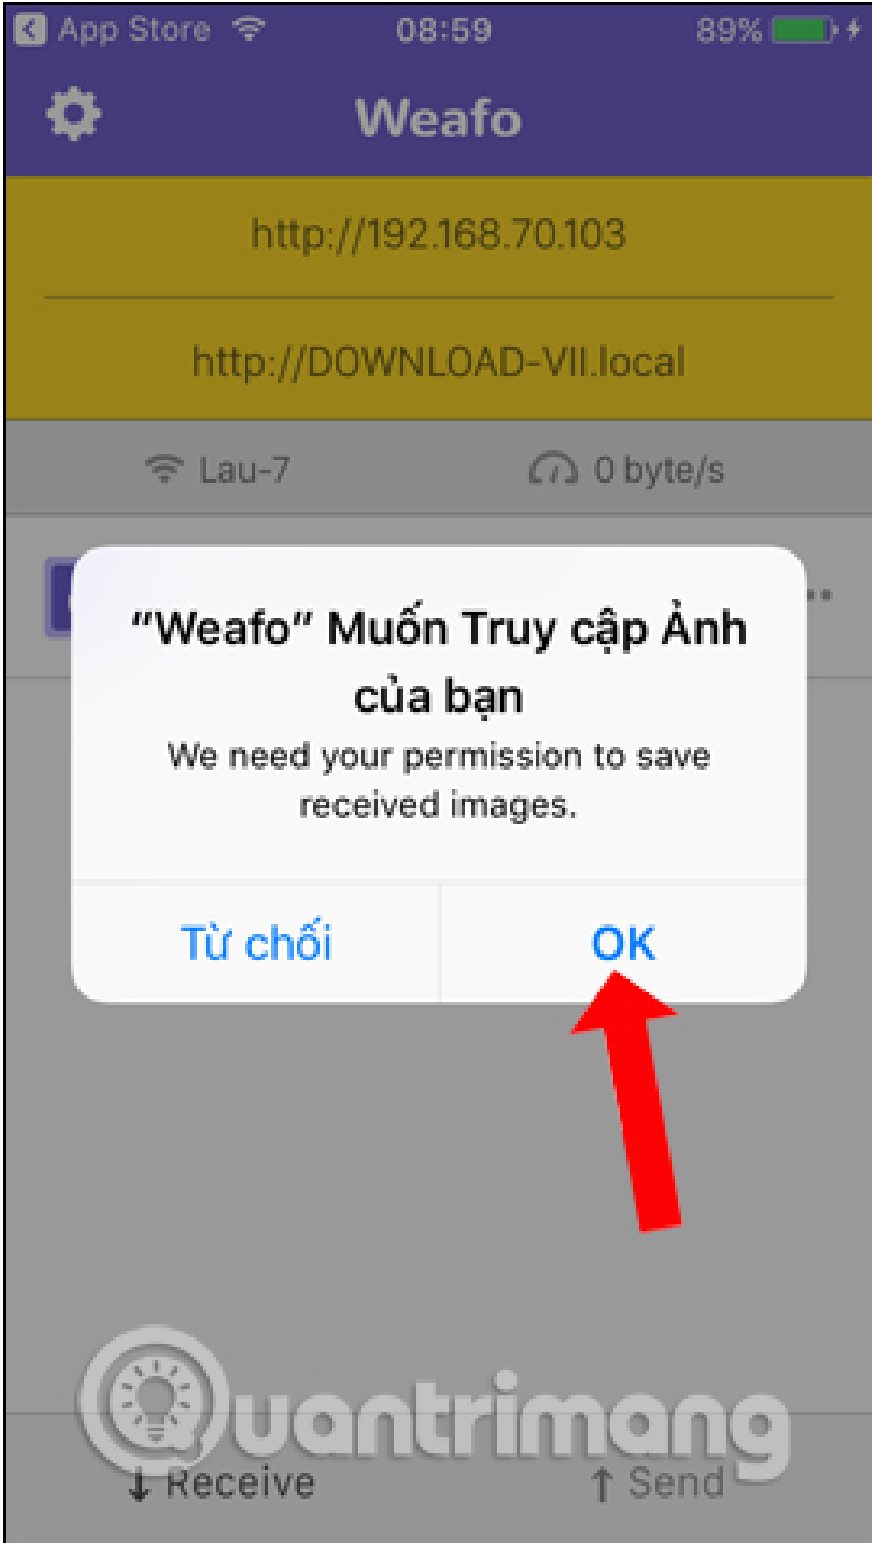

When the data is downloaded, the interface Weafo computer and the Weafo application on the iPhone will appear. Note that you need to agree to let **Weafo access your photo album** to automatically save photos to your iPhone album.

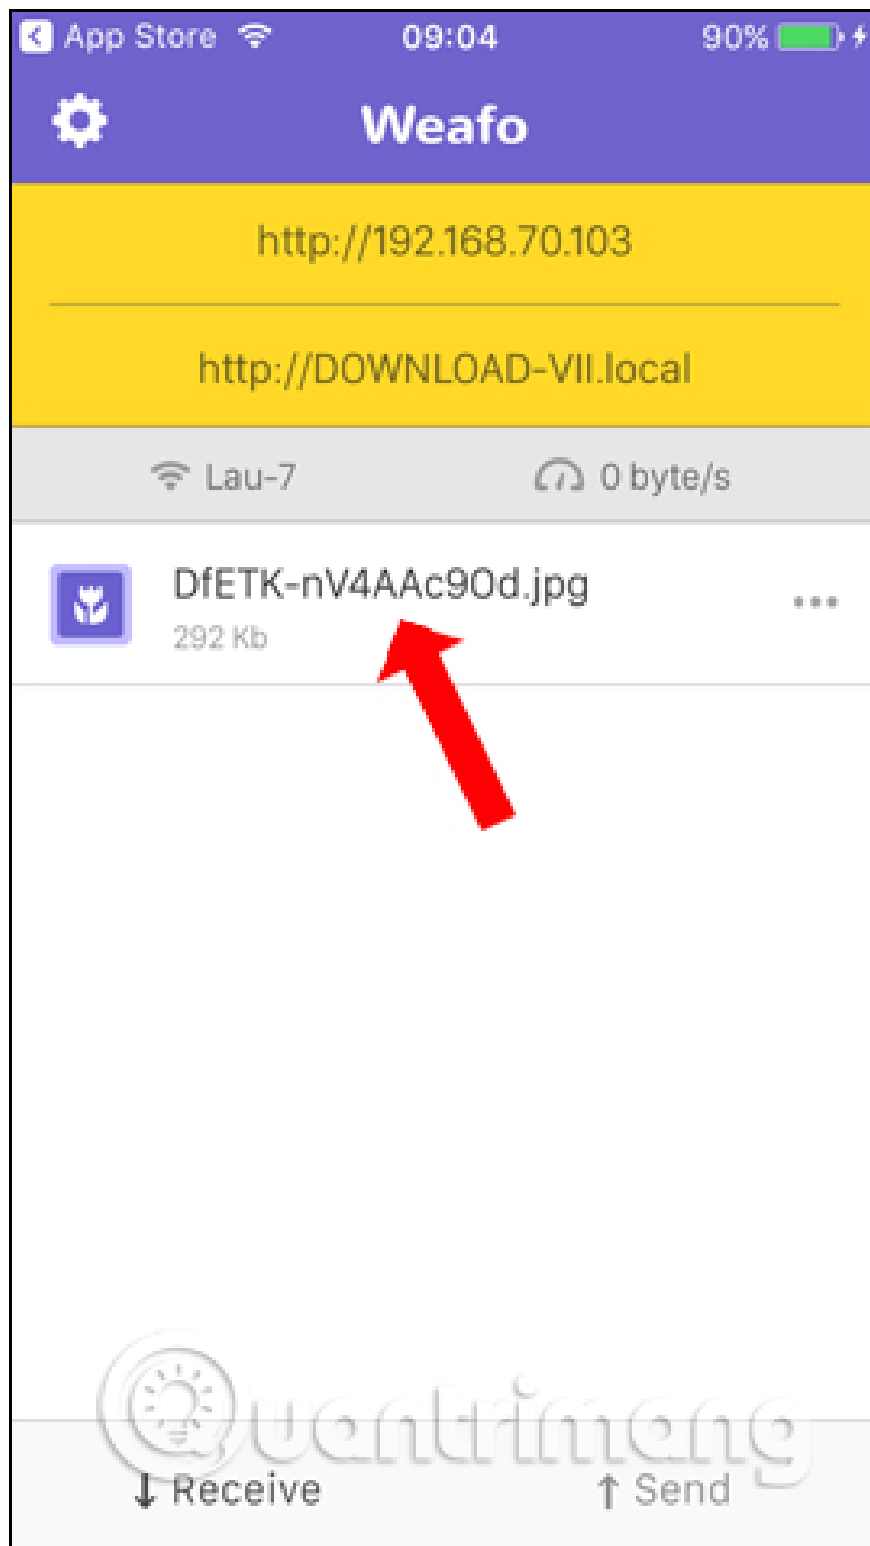

Drop your files
