

How to use ?Color Widgets to create calendar and battery widgets on iOS

Color Widgets is one of the widget customization applications on iPhone that many people are using, besides the WidgetSmith application.

Color Widgets is one of the widget customization applications on iPhone that many people are using, besides the WidgetSmith application. Color Widgets will create a calendar widget with battery displayed right on the screen interface. In particular, we also have many options to transform the widget to our liking. You can change the color and font of the widget with new, beautiful colors. Or if we like, we can also use our image as a background widget. The article below will guide you how to use Color Widgets on iPhone.

Instructions for using Color Widgets iOS 14

Step 1:

You download the Color Widgets application for iPhone by following the link below.

In the application interface we will choose any widget type. Widgets with a crown icon will be charged. Click to select the widget and then select **Edit Widget** to edit.

Step 2:

First of all, we will choose **the size for the widget** including small, medium and large. If you choose a color as a widget, you can change the background, theme and font displayed. You will select Background and then select Theme.

Next, **change the font style** displaying the date in the widget.

Step 3:

In case you want to use your photo as the background for the widget , scroll down and select **Add Photo** . Then select photos in the album. The result will be as shown below. If you choose a background image, you cannot change the Background and Theme, you can only change the font.

Finally **click Set Widget** to save.

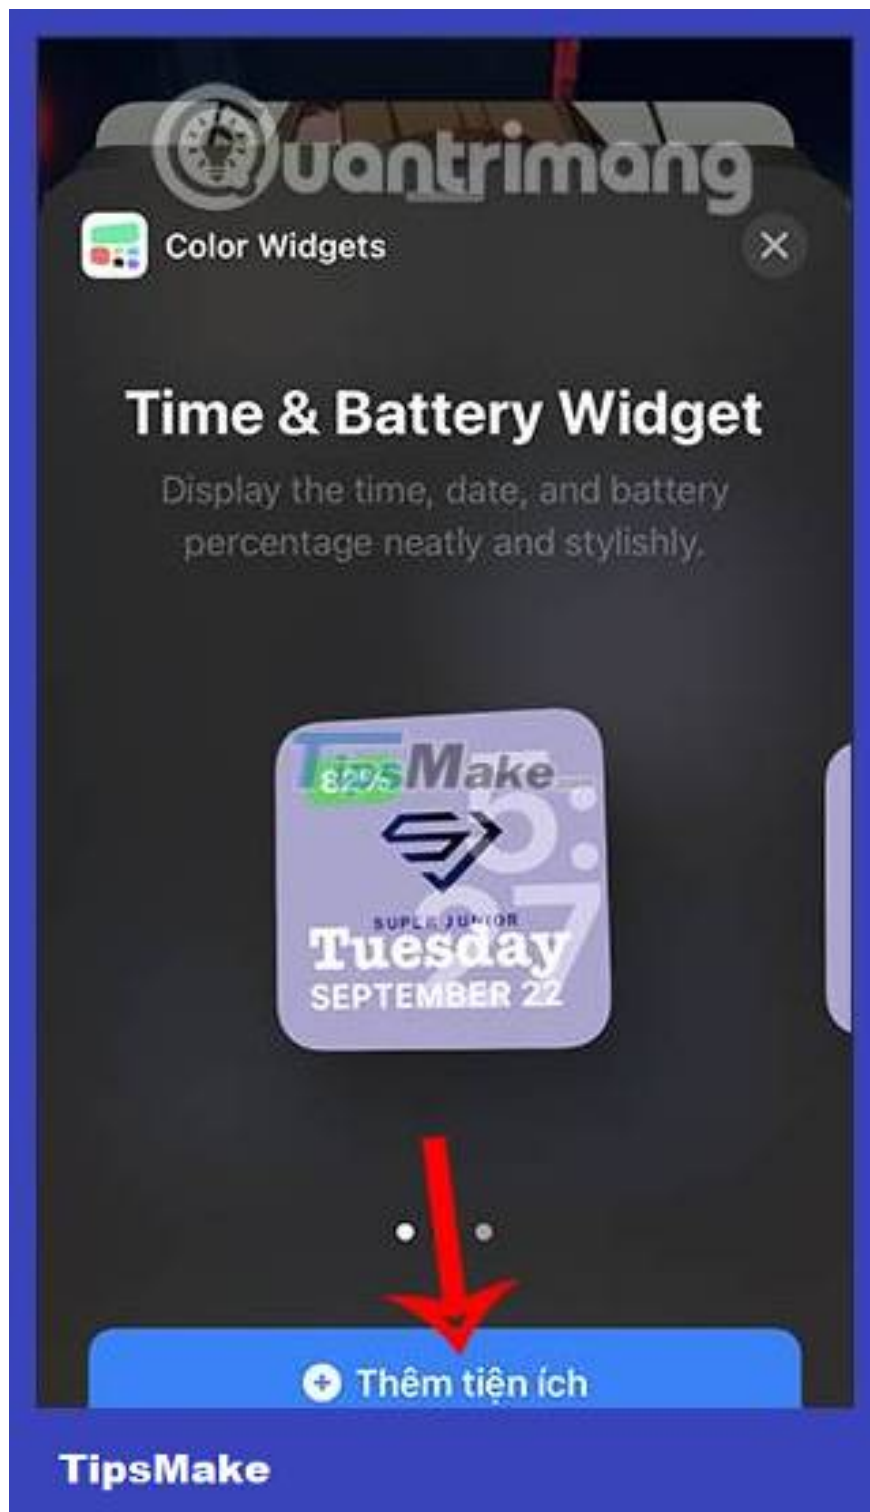

Step 4:

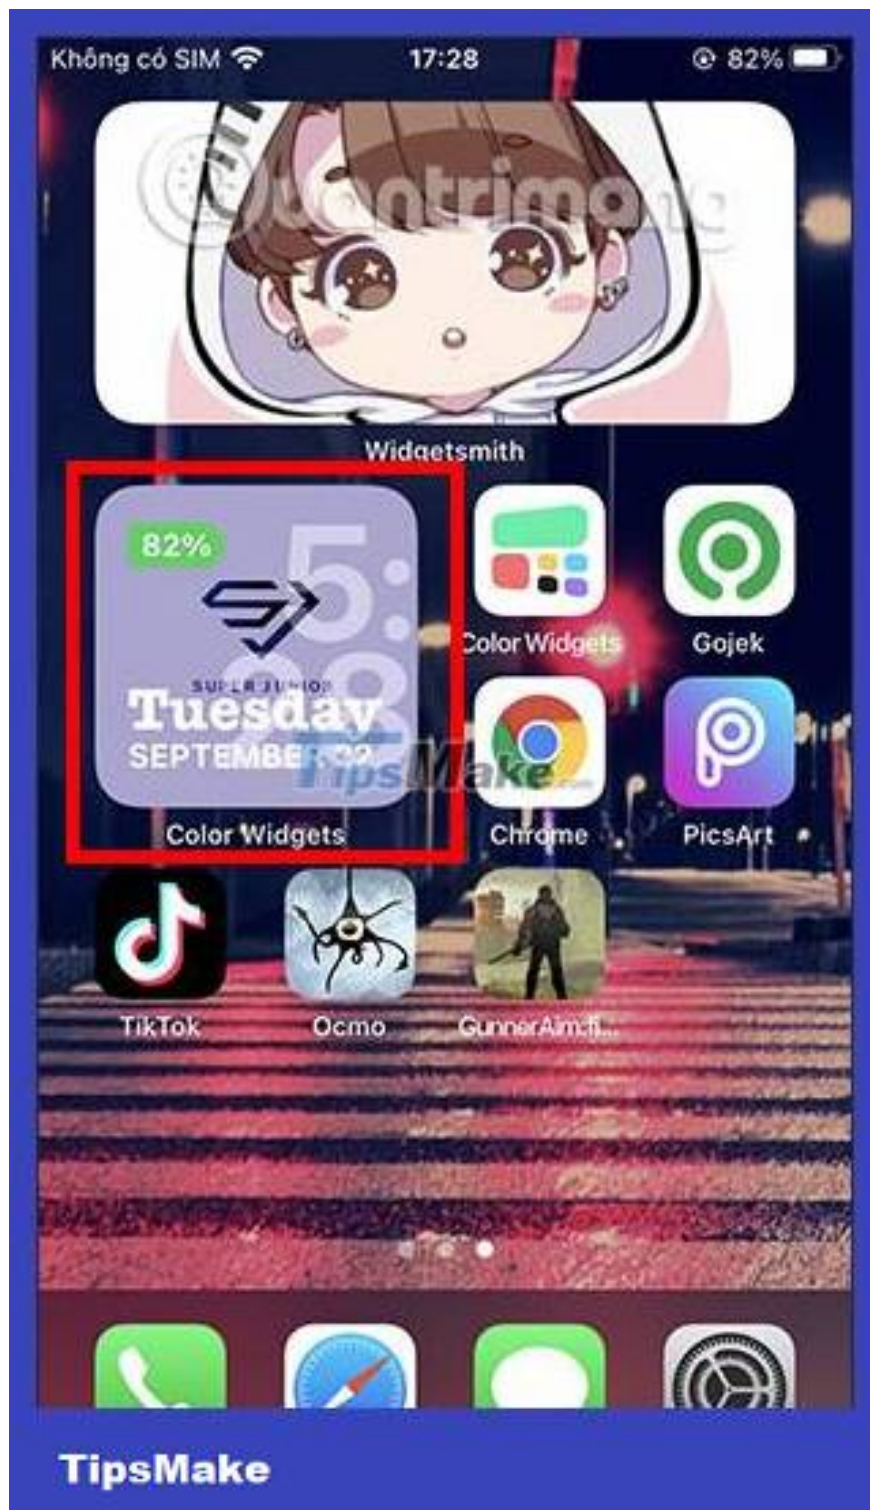

Return to the main screen, **press and hold the screen** , then press **the + icon** . You will now see **the Color Widgets section** to click to select. **Choose a size for the widget** and then press the **Add widget button** .

As a result, you will get a screen with the Color Widgets widget as shown below, including the current date and time and current battery percentage.
