

How to view Camera on computer simply and quickly

Do you want to open the Webcam Camera to check the signal for important Online Video Call meetings? Below is a simple and quick way to view the Camera on your computer.

Are you looking for a way to open the Webcam Camera on your computer to check the signal for important Online Video Call meetings? In this article, TipsMake shares with you the fastest and simplest way to view Camera on your computer!

I. Camera - What is a Webcam on a computer?

Camera - Webcams on computers are camera devices (can be built-in or separate) that are connected to the computer for recording purposes. Normally, laptops are equipped with Webcams for work and daily use. Meanwhile, desktop PCs do not have a built-in Webcam and require you to buy a separate Webcam device and connect through the available USB port on the computer.

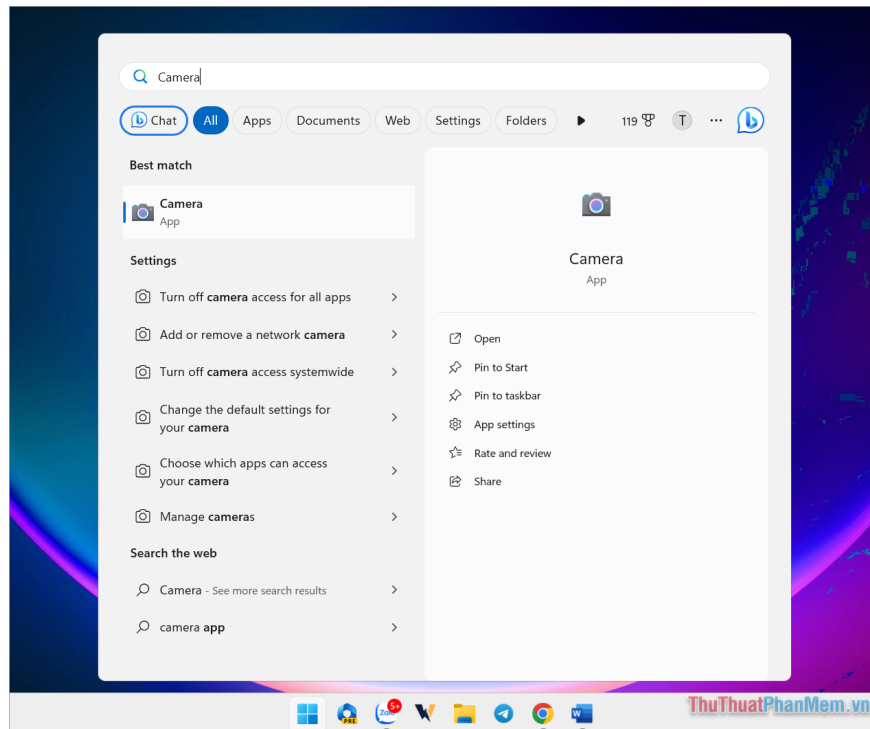

Camera - Webcam is very important when using a computer because they are applied to the following features: Face unlock (Windows Hello), making Video Calls, holding meetings via Zoom/ Microsoft Teams/ Google Meet applications, taking photos, filming.

II. Simple instructions for Camera on computer

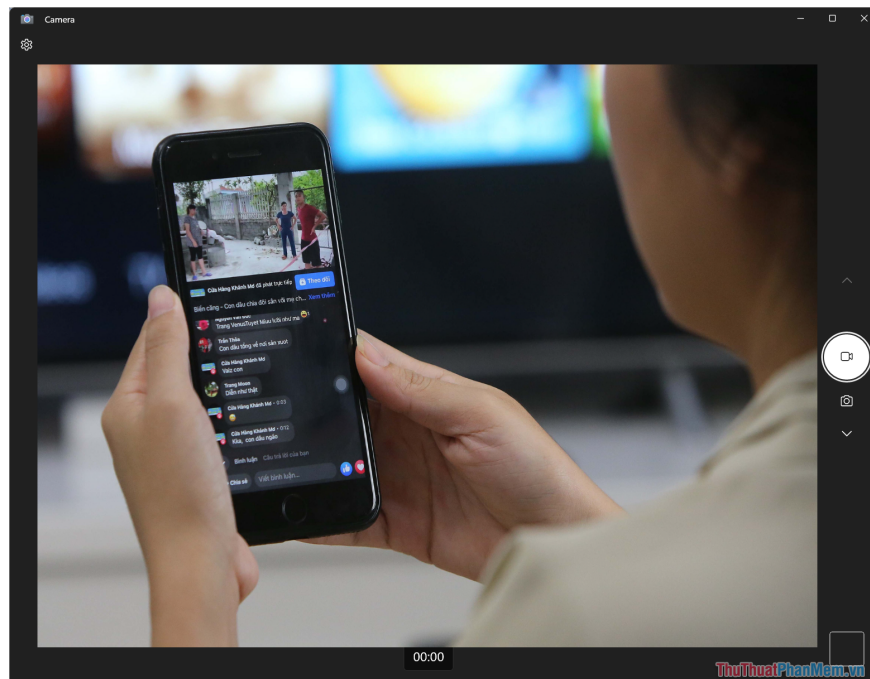

1. How to view Camera on computer directly

On the computer platform, the Windows operating system has a built-in Camera application that allows users to view Webcam/Camera quickly and supports taking photos and videos directly without the need for 3rd party applications.

Step 1 : Open **Start** , enter the keyword **Camera** in the search bar and open the Camera application to activate the Webcam on your computer.

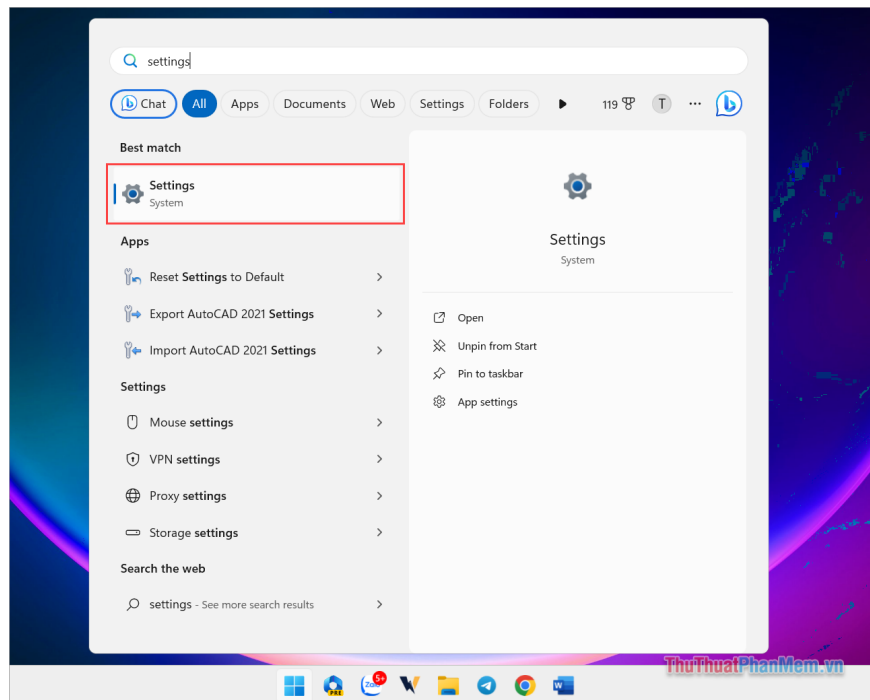

Step 2 : At this time, the system will activate the Camera available on the computer for you to use. In the Camera app, you can record videos or take photos using available tools.

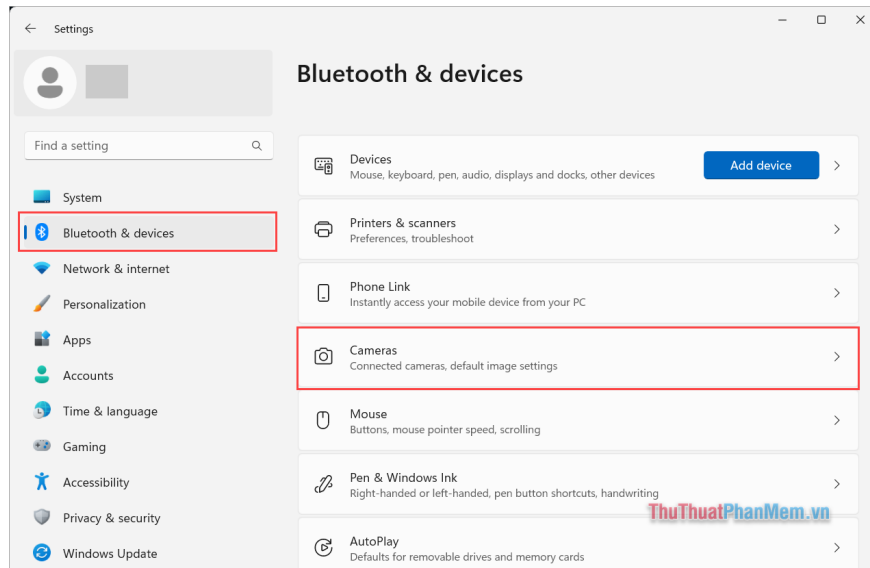

2. How to view the Camera and adjust parameters on the computer

In addition to viewing the Camera on your computer, you can also adjust Camera parameters such as: Brightness, contrast, color temperature, etc. These features help you calibrate the camera quality better and more appropriately in the lighting conditions you are using.

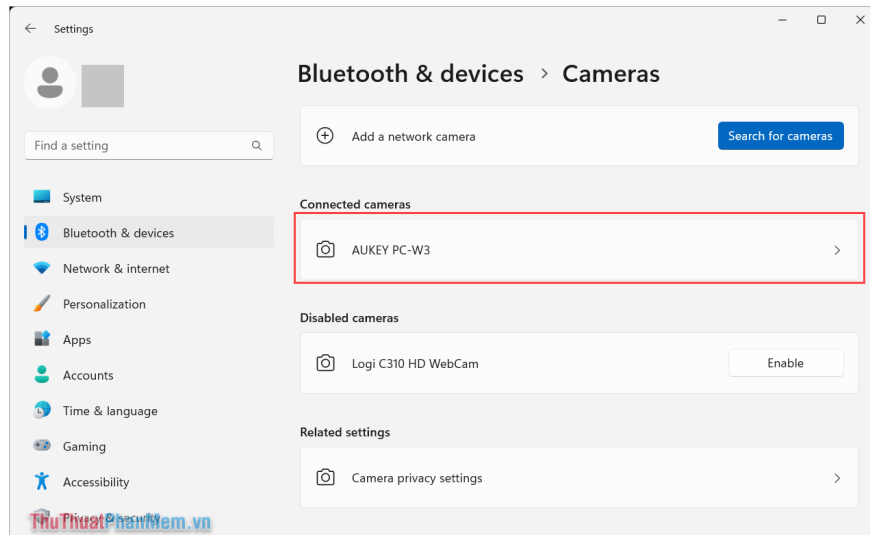

Step 1 : Open **Settings** on your Windows computer by opening it in Start or using the **Windows + I** key combination .

Step 2 : Then, select the **Bluetooth & Devices** tab , select **Cameras** to view the Camera on your computer.

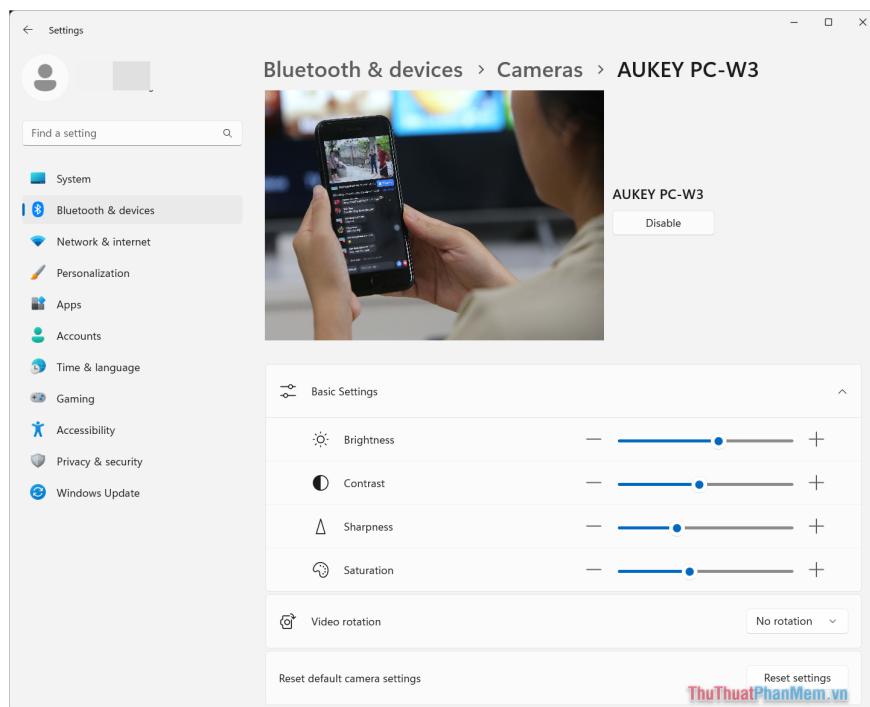

Step 3 : Next, select Available Cameras on your computer. Depending on the device, the Camera name may be different.

Step 4 : When the Camera setup window appears, you will adjust the parameters as follows.

1. **Disable/Enable :** Turn off/on Camera on the computer
2. **Brightness :** Brightness
3. **Contrast :** Contrast
4. **Sharpness :** Degree of detail
5. **Saturation :** Color temperature
6. **Video rotation :** Rotate camera vertically/horizontally
7. **Reset default camera settings :** Set settings to default

Depending on the light in the room, you set the parameters to be most suitable and beautiful.

3. Why does the Laptop computer not display the Camera?

Many people use Laptops when checking the Camera but do not see the display, only see a black screen and cannot see various information. The reason for this problem is because your Camera has not been activated or is faulty. In this case, you can fix it in the following ways:

1. Restart the Laptop to reactivate the Camera.
2. Enable Camera in **Settings ? Devices & Bluetooth ? Camera ? Enable** .
3. The computer has a Camera hardware error (Do it by taking it for repair or in-depth inspection).

There are many different reasons why your Laptop does not display the Camera even though it is equipped with an inbuilt Camera. If you cannot activate the Camera on your Laptop, take it to a repair shop for thorough support and replacement if necessary.

4. Why does the computer install a Webcam on the computer but the Camera is not displayed?

Normally, for desktop computers, you just need to connect the Webcam via USB port and the system will automatically open the Webcam for you. However, there are also many computers with errors that prevent the Webcam from automatically opening when connected. In case you encounter a Webcam error on your computer, please do some of the following solutions to fix it.

1. Enable Camera in **Settings ? Devices & Bluetooth ? Camera ? Enable** .
2. Install Driver for Webcam (Download on Webcam home page).
3. Restart the computer.
4. Reconnect the Webcam via another USB port.
