

How to view the Emoji emoticons of iPhone on Android

If you use an Android phone and want to make sure the message you send to a friend using iPhone will display as expected, you should use the iPhone emoji. To use the iPhone emoji on Android does not need to root the phone, this is a detailed guide for you.

Everyone loves emoji emoticons! Emoji emoticons make meaning messages richer. But do you know the phone maker uses different emoji versions? Emoticons on your device may be different on the device of the sender.

However, you can rest assured, if you send a heart-shaped emoji to a friend using the iPhone, it won't turn into a pile of dung.

Emoji has been standardized. Smilies on this device will also be smileys on other devices. However, you cannot know exactly what emoji emoticons will look like on other devices. Only a small change in facial expression can evoke another emotional response. And with emoji, this difference can cause misunderstandings.

Smileys & People														
face-positive														
No	Code	Browser	Appl	Goog	Twtr	One	FB	Sams.	Wind.	GMail	SB	DCM	KDDI	CLDR Short Name
1	U+1F600													grinning face
2	U+1F601													beaming face with smiling eyes
3	U+1F602													face with tears of joy

Emoticons display differently on devices

If you use an Android phone and want to make sure the message you send to a friend using iPhone will display as expected, you should use the iPhone emoji.

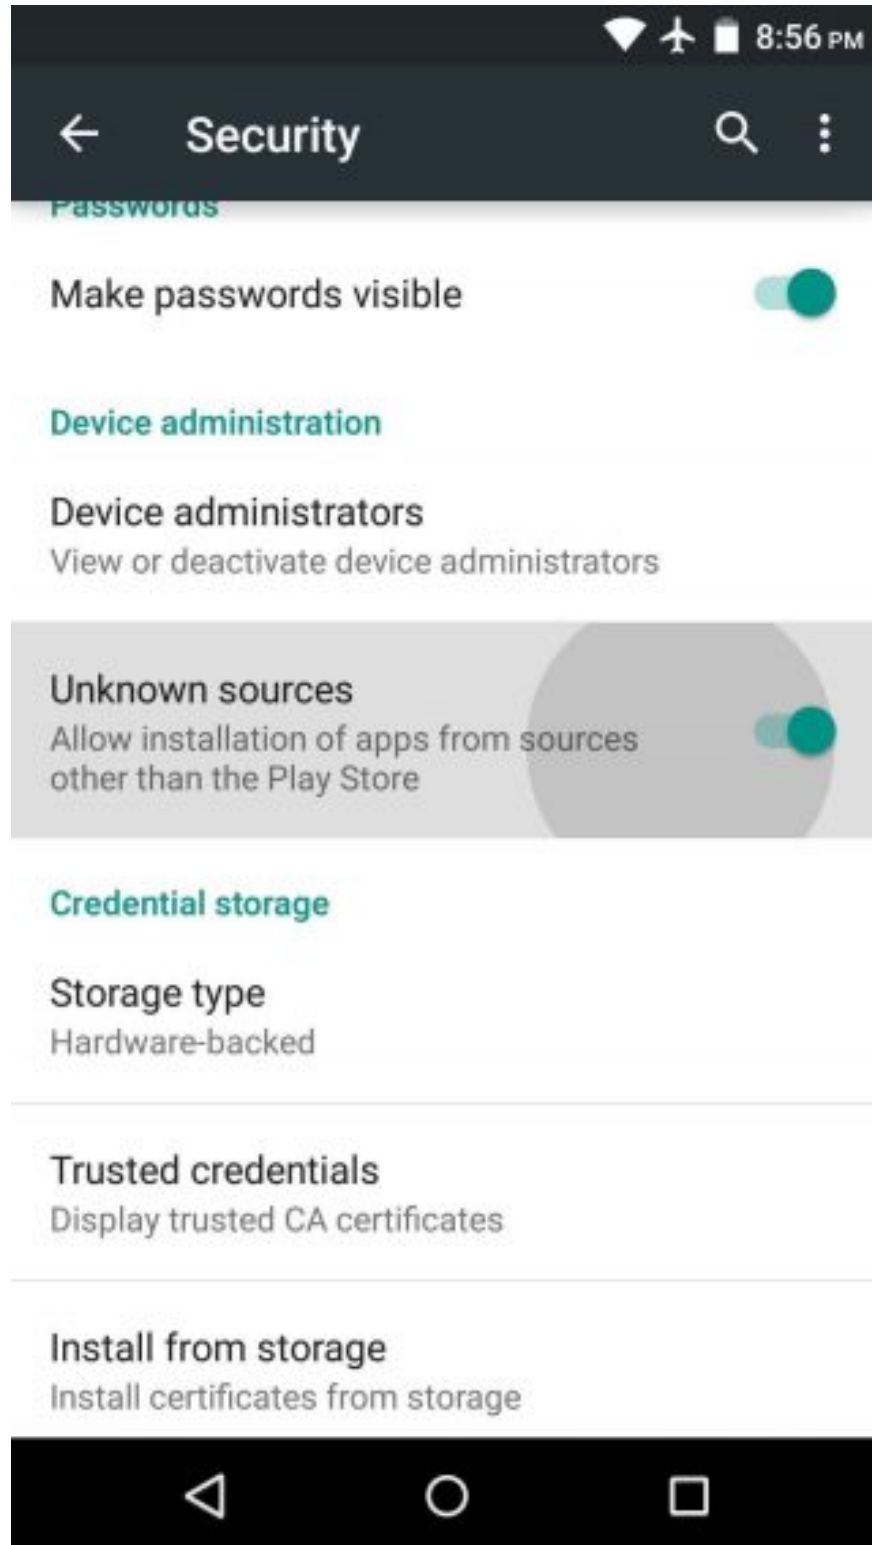

There are many different ways to view emoticons of iPhone on Android phones. There are many ways to root your phone. However, you can still do this without rooting your Android phone.

Here are two ways to get iPhone emoji on Android.

Download Emoji font font for Android

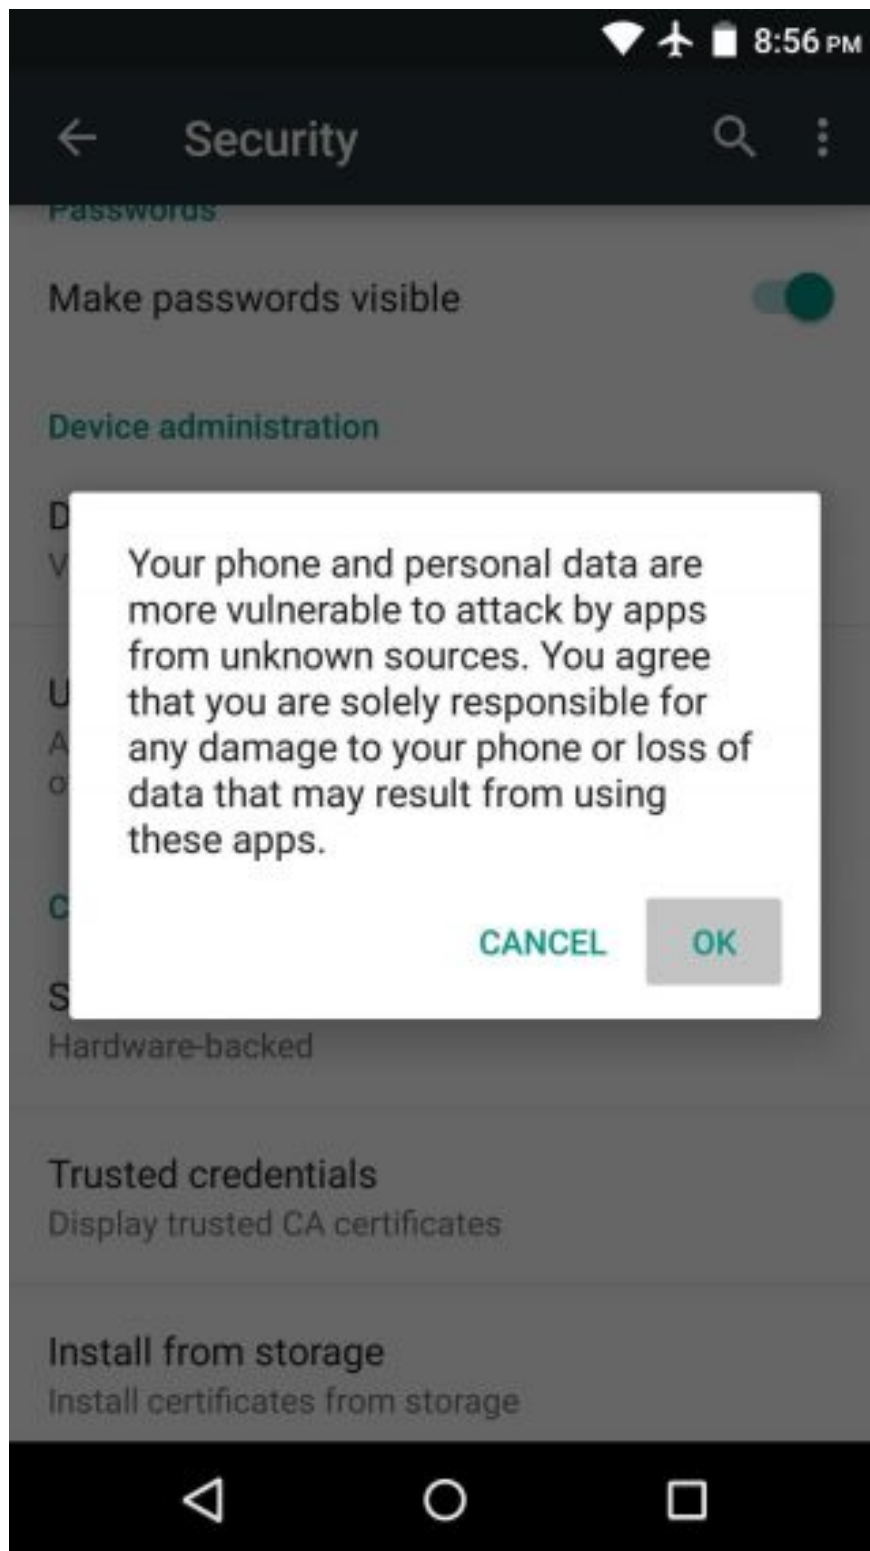

1. First, you need to download and install Emoji 3.

Note: You cannot download Emoji Font 3 from the Google Play Store. To download, you need to open the device's setup menu, and activate the **Unknown Sources** option. What is the article File APK? How to download and install the APK file? If you do not know how to install it.

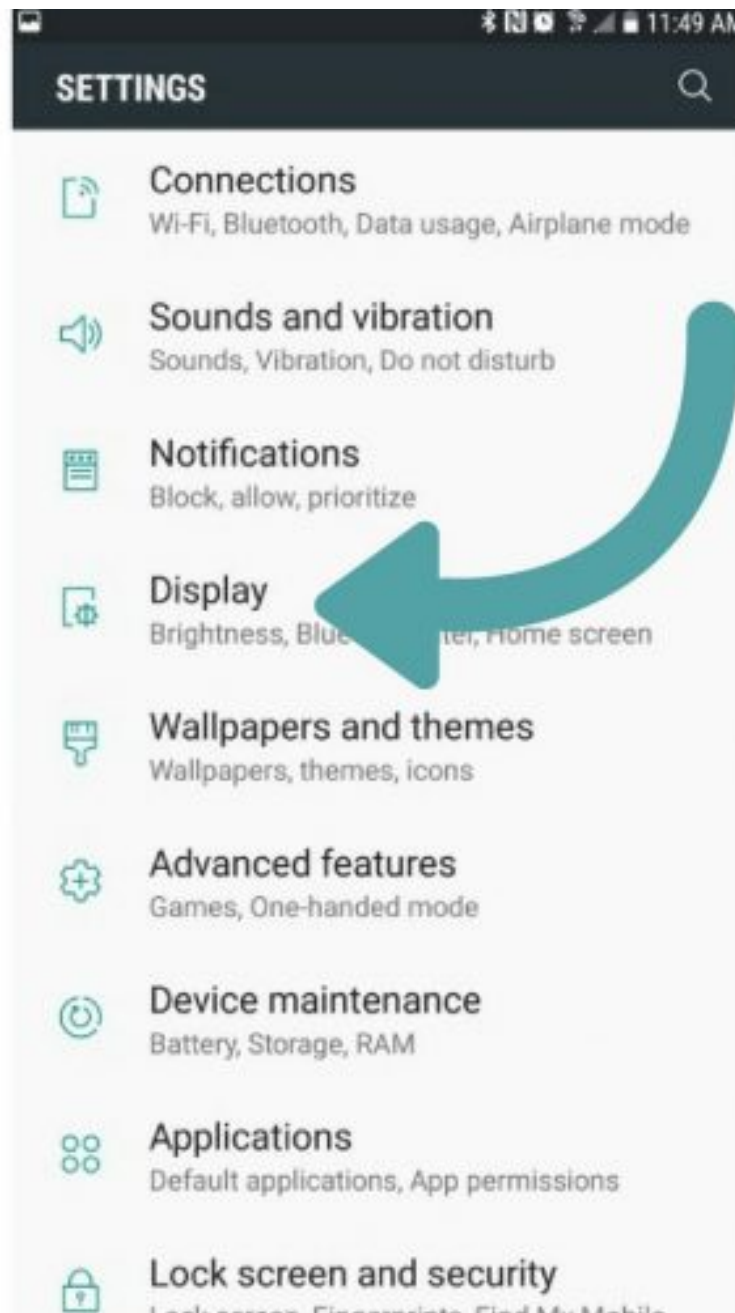

You will receive a warning stating that unidentified applications may not be safe. This is correct, you need to be careful with the programs you want to install. However, if you install from reliable sources, you can ignore this

warning. Google just doesn't want you to install apps not from their store.

2. After downloading, open Settings / Settings -> Display / Screen -> Font and change to Emoji font 3.

3. Download **Gboard** from Google Play Store.
4. Finally, set Gboard as the default keyboard. Open settings, select **Language and Input / Language and keyboard** (on Android 7.0 you go to Settings> General management> Language and keyboard) and change the keyboard.

You should now be able to open the iPhone emoji emoticon from the keyboard by clicking on the icon at the bottom of the keyboard.

Download Emoji keyboard for Android

Although using emoji fonts is quite convenient, some phones do not support this font. If so, you will have to root your phone to support fonts. If you still don't want to root your phone, here's another way to do it.

1. First, turn on **Unknown Sources** as above.
2. Download and install iOS Emoji.
3. Download and install **Kika Keyboard** from the Google Play Store.
