Manual recording on Voice Over & Recorder

Step 1:

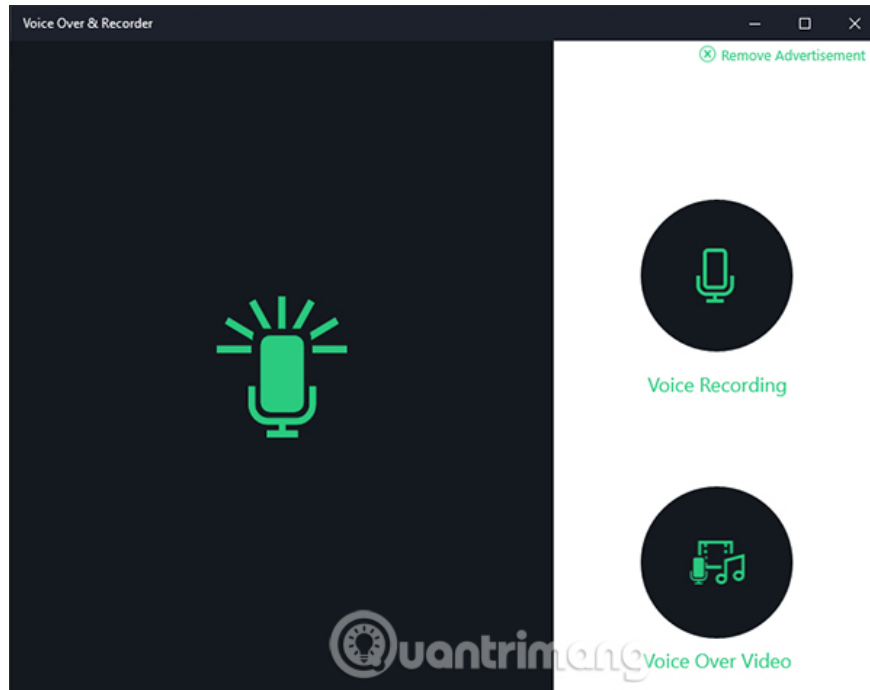

Users click on the link below to download and install Voice Over & Recorder application on Windows 10 computer.

1. Download the Voice Over & Recorder app

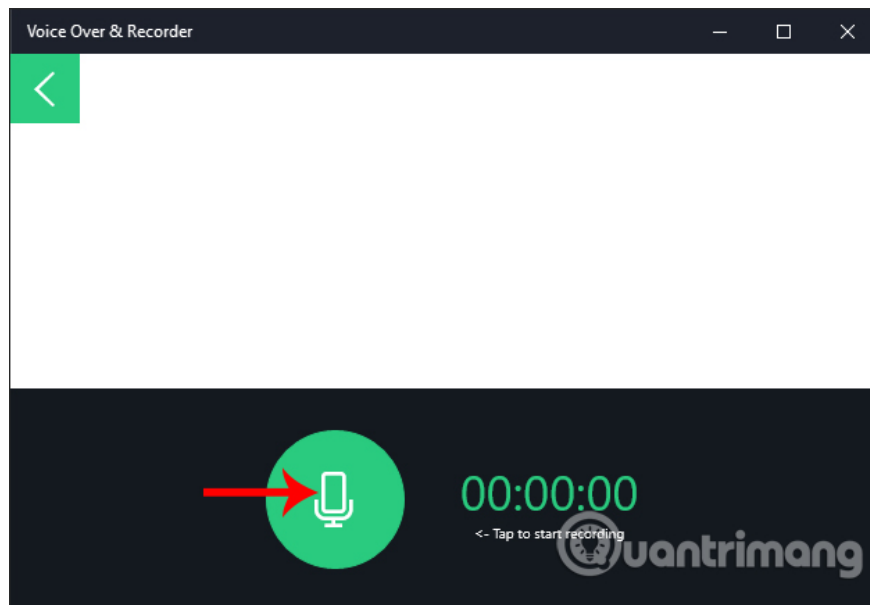

Step 2:

After installation is complete, display the interface of the application with 2 main features of Voice Recording for recording and Voice Over Video to voice into video. Click **Voice Recording** to start recording on the computer.

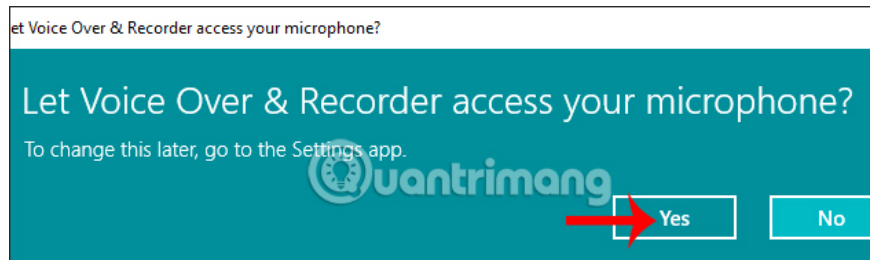

Step 3:

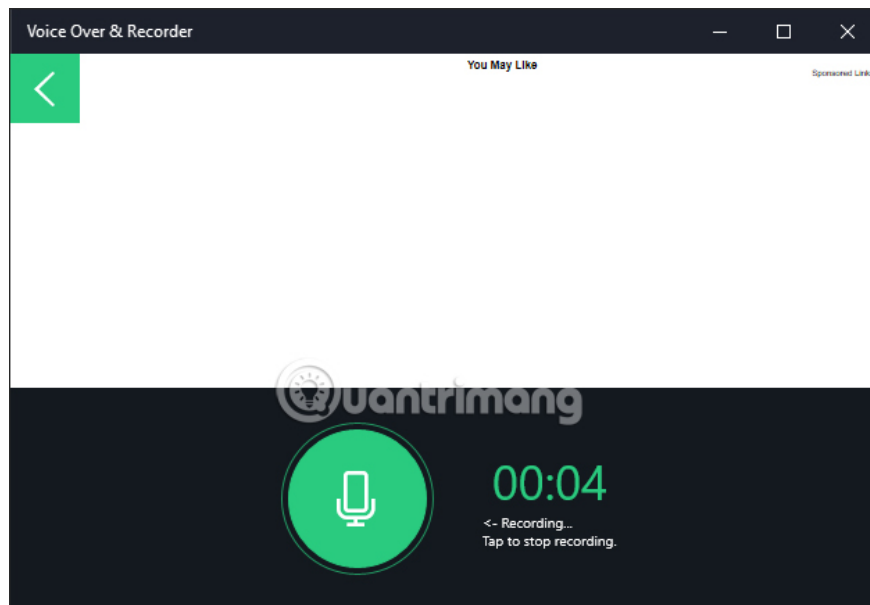

In the selected recording interface on **the microphone icon** to conduct recording.

At this time, the application will require users to **use the microphone on the computer** to record, click **the Yes button** to agree.

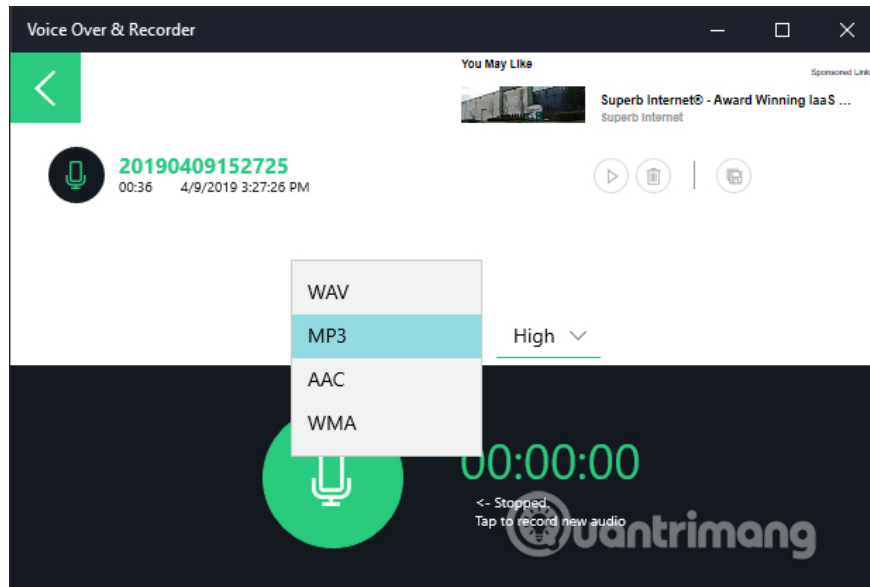

The recording process on the computer will take place immediately with the recording time displayed on the interface. To stop recording, press the microphone icon again to stop.

Step 4:

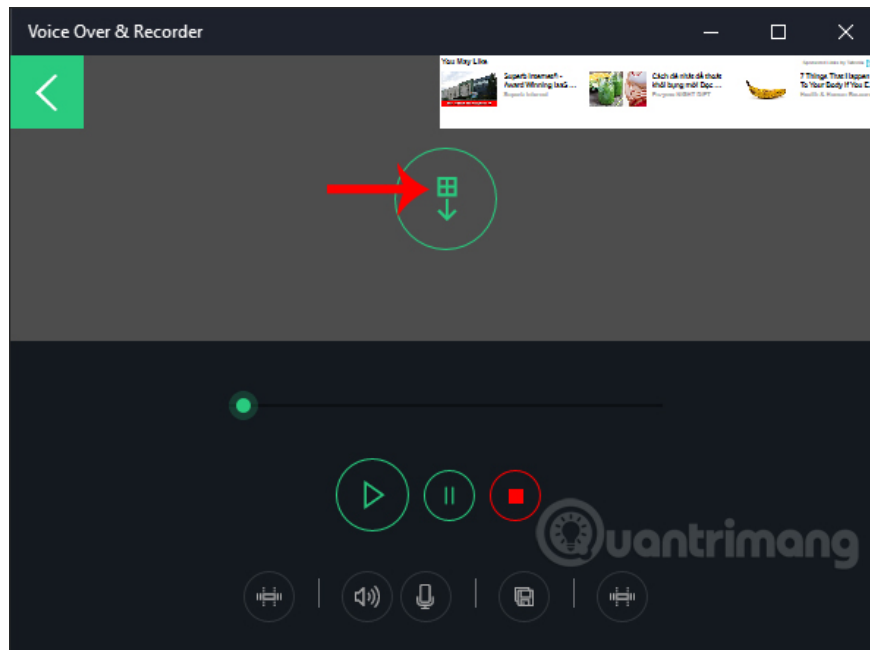

Sound recording recording displayed in the interface with the total recording time, recording file name, specific recording time. Besides the play icon to play the audio file, the trash icon to delete audio files and floppy icons to download the recording to the computer.

If you want to **save the audio file**, you first need to play the sound and then **select the file format** and **sound quality you** want to save.

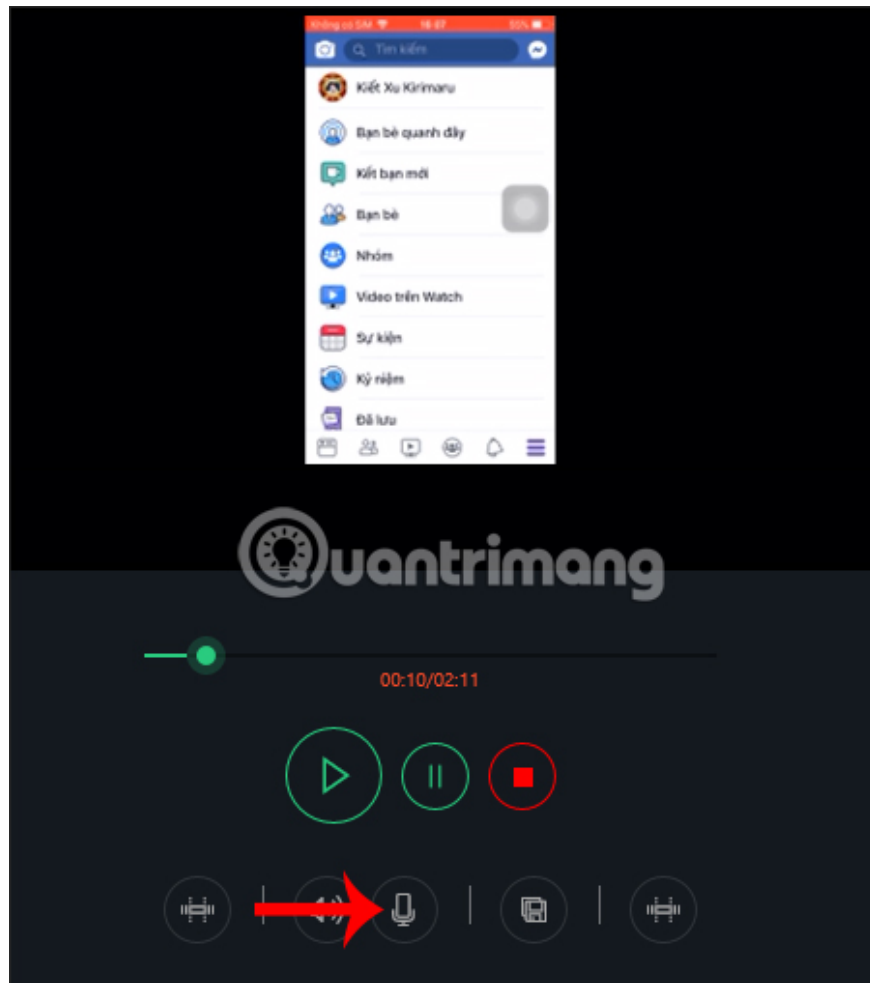

Step 5:

Going back to the application interface click on **Voice Over Video feature** , insert audio into video and extract to MP4. In the new interface click on **the circle icon in the middle** to enter the video into the application.

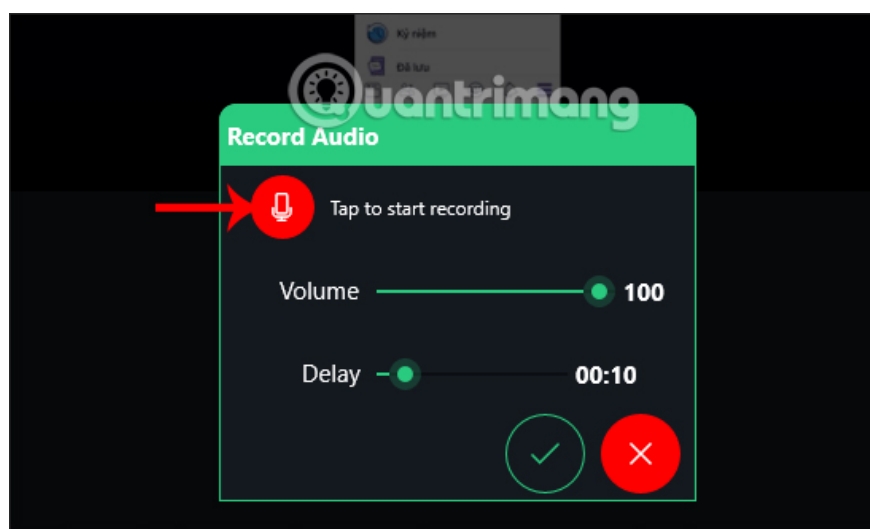

Next click on **the microphone icon** to conduct a recording for the video.

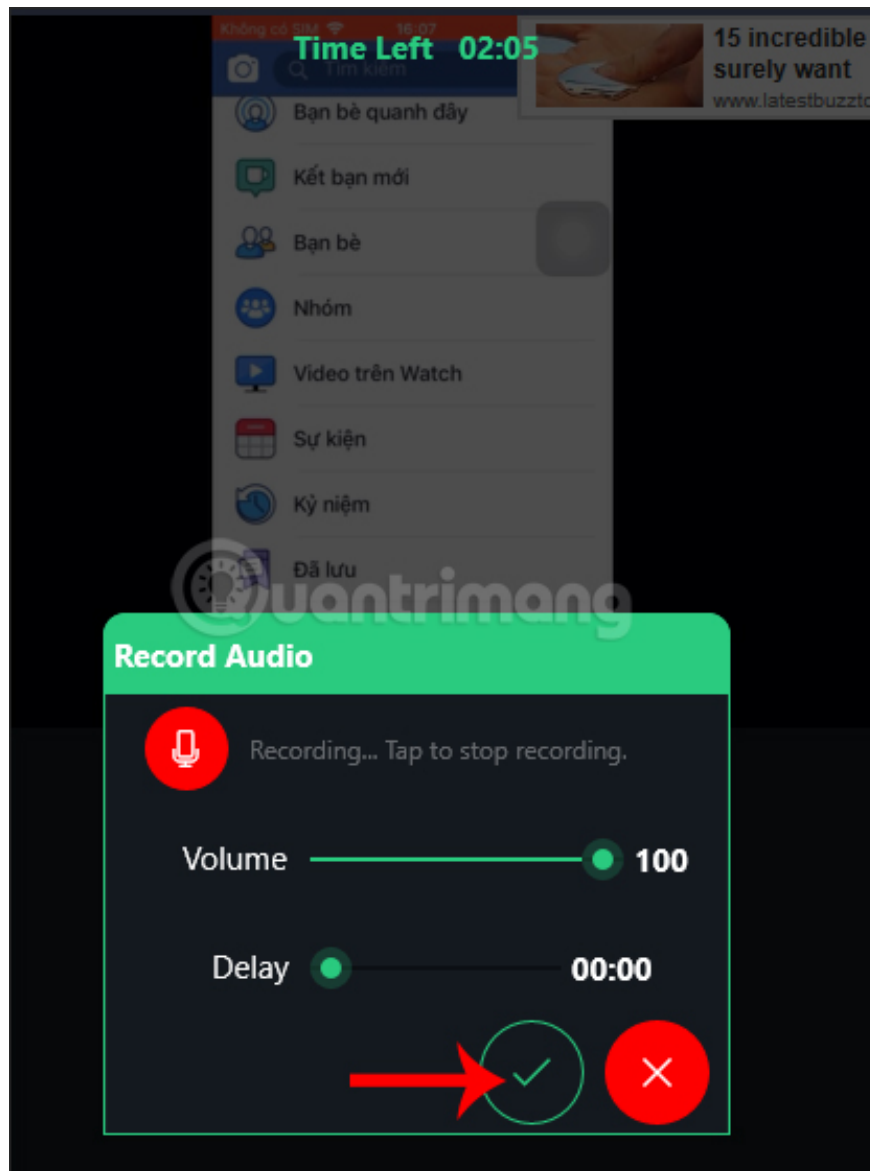

Step 5:

Users can select **the sound level** to insert into the current video, then click **the red microphone icon** to proceed with the recording. You have up to 2:06 to record sound.

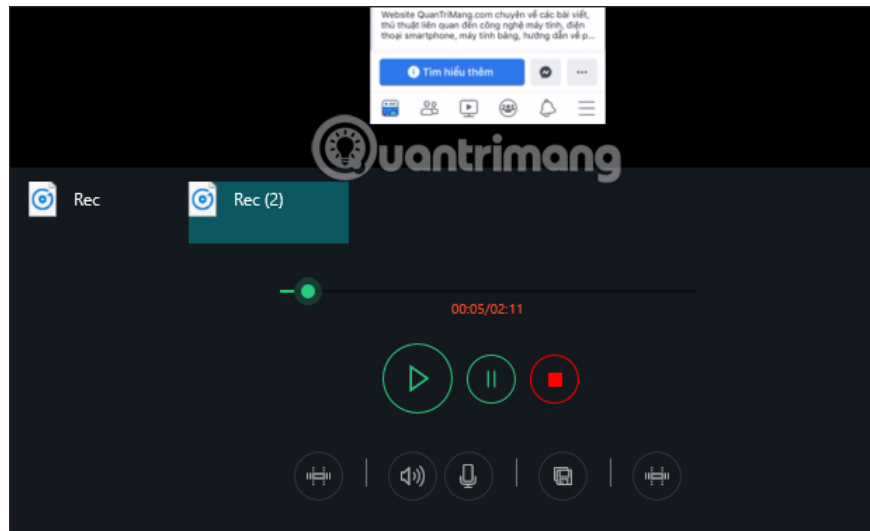

The recording process takes place immediately after that, the recording time is displayed on the same interface. If recording is complete, press the microphone icon or v again to save it.

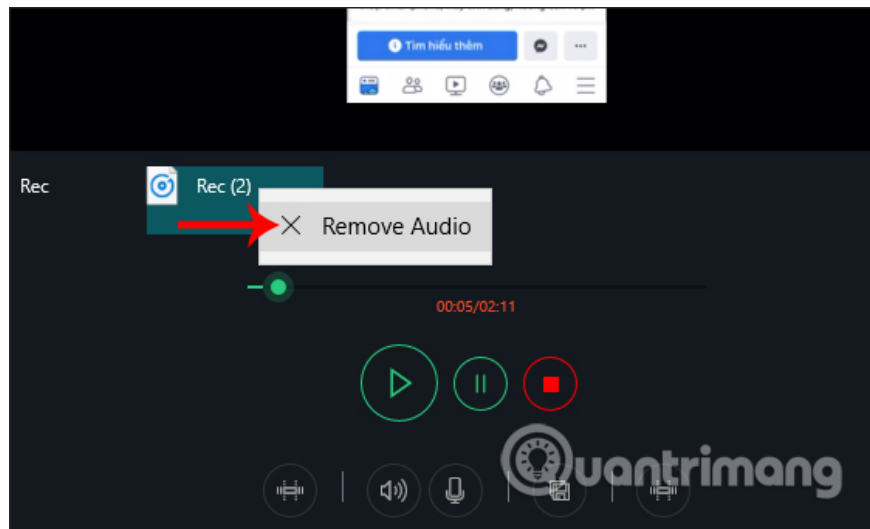

Step 6:

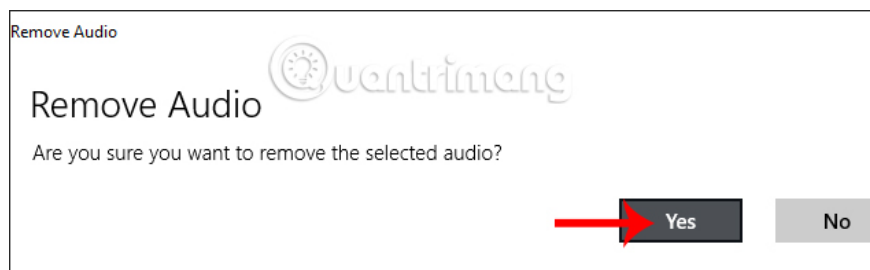

Going back to the application interface we will see the audio recording on the video displayed right below the playback frame. Each video can be dubbed multiple times. We click to view the selected video and audio recording.

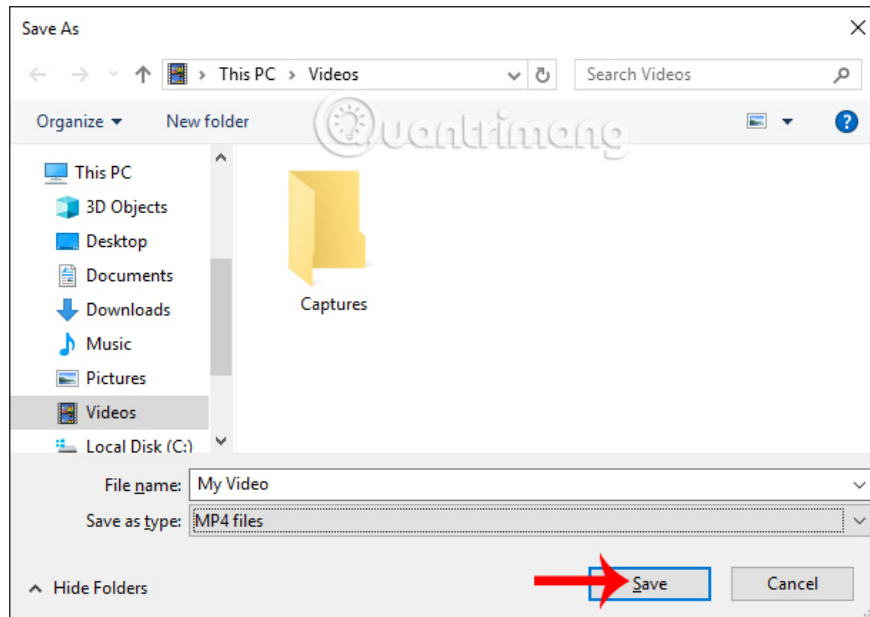

If you want to delete the audio track recorded in the video, right-click the recording and select **Remove Audio** .

Next you need to **press Yes** to delete the audio clip in the video is okay.

Finally, click the floppy disk icon to save the audio dubbing video to your computer in MP4 format.

Although the voice recording time on Voice Over & Recorder video is still limited, users can also add sound or even record the voice into the video. It is possible to nest multiple audio tracks or delete audio clips in video if desired.

I wish you all success!
