

How to watch TV on the computer using KODI software

How to watch TV on the computer using KODI software. The 4.0 era is happening, only with Internet connection and a specialized software, we can enjoy the channels quickly and conveniently, without the need for a bulky TV and an antenna.

The 4.0 era is happening, with only an Internet connection and a dedicated software, we can enjoy the channels quickly and conveniently, without the need for a bulky TV and an antenna or pan.

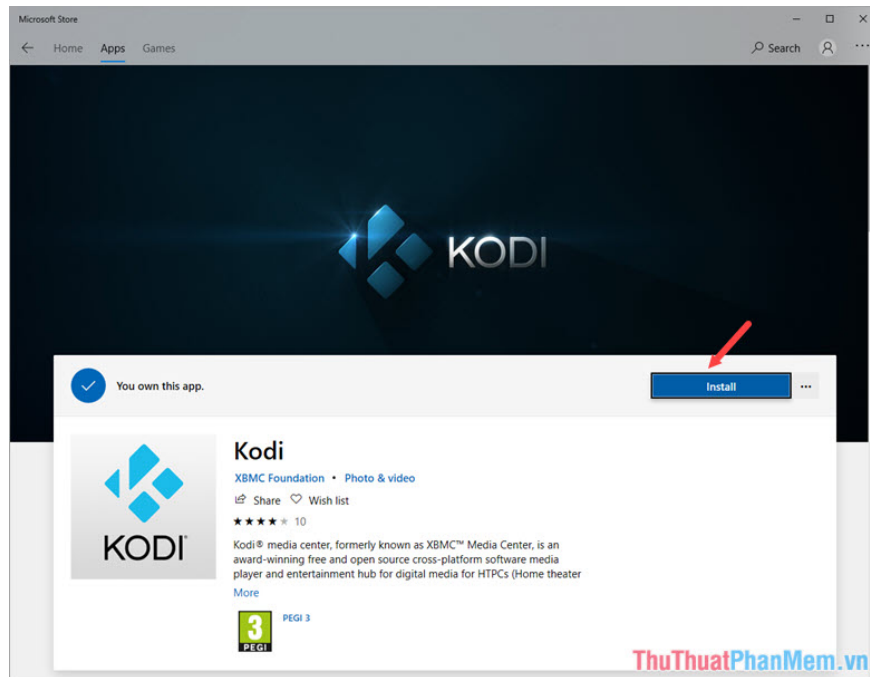

To watch TV on the computer, Thuthuatphanmem.vn will introduce to you the open source software KODI. Please see the instructions below!

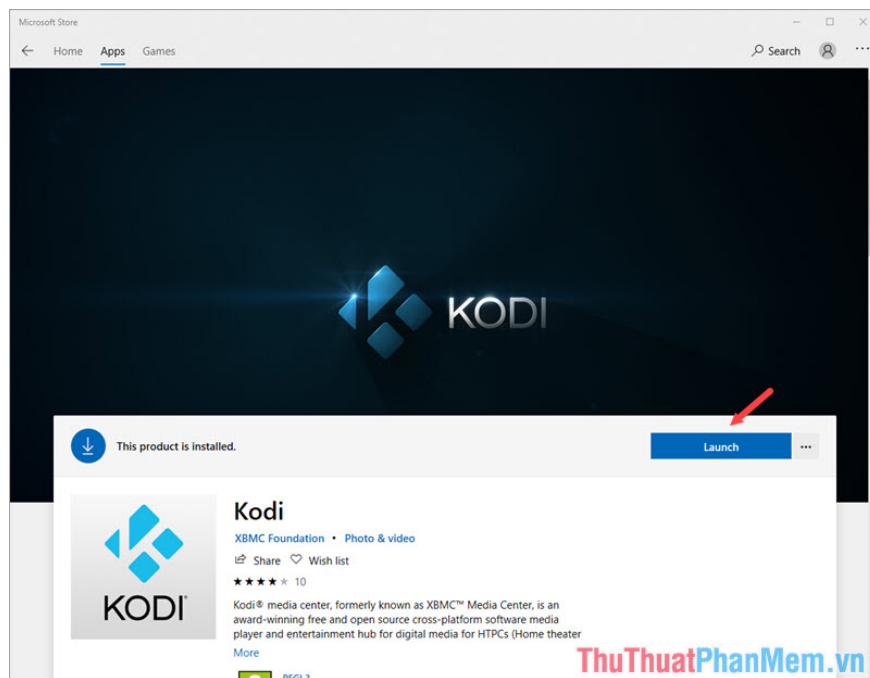

Step 1: You can download Kodi here.

<https://kodi.tv/download>

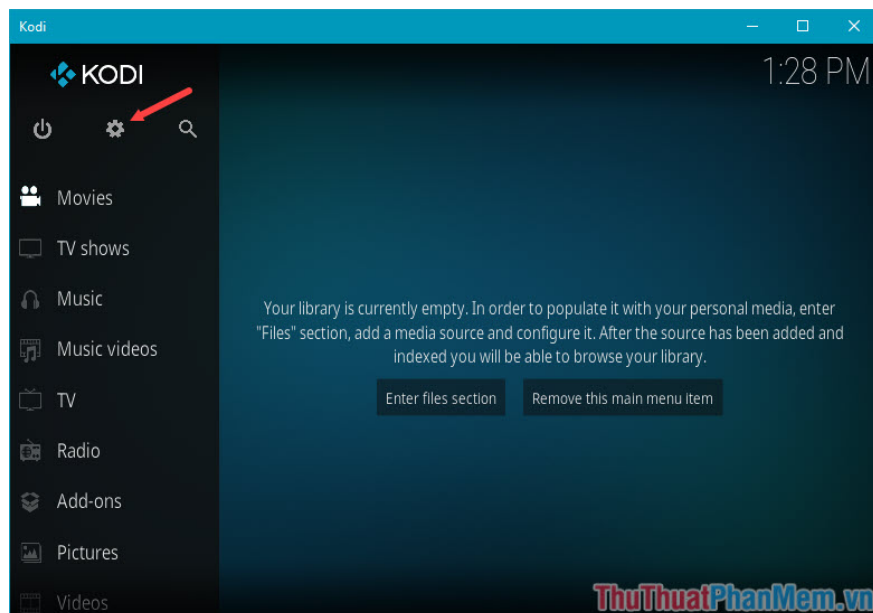

Or you can go to Microsoft Store on Windows 10 to find Kodi software as shown and install by clicking **Install** .

Step 2: After installing successfully, click on **Launch** to launch Kodi.

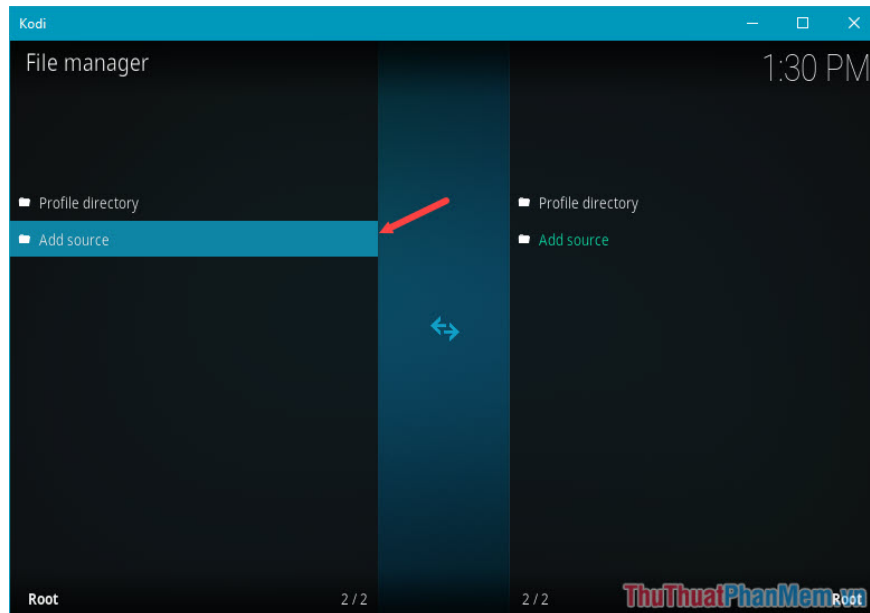

Step 3: Click the **Settings** icon with gear as shown below.

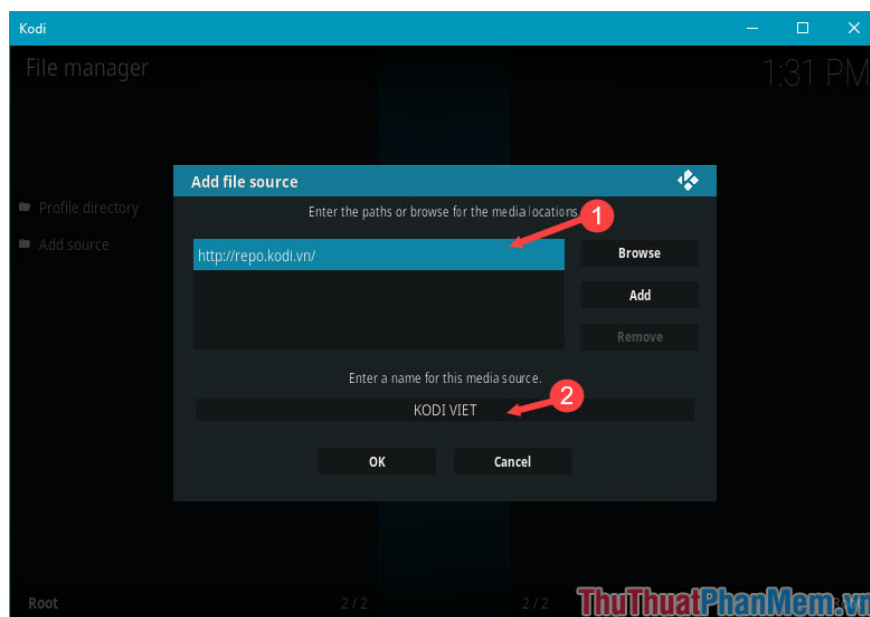

Step 4: Select to **File Manager** .

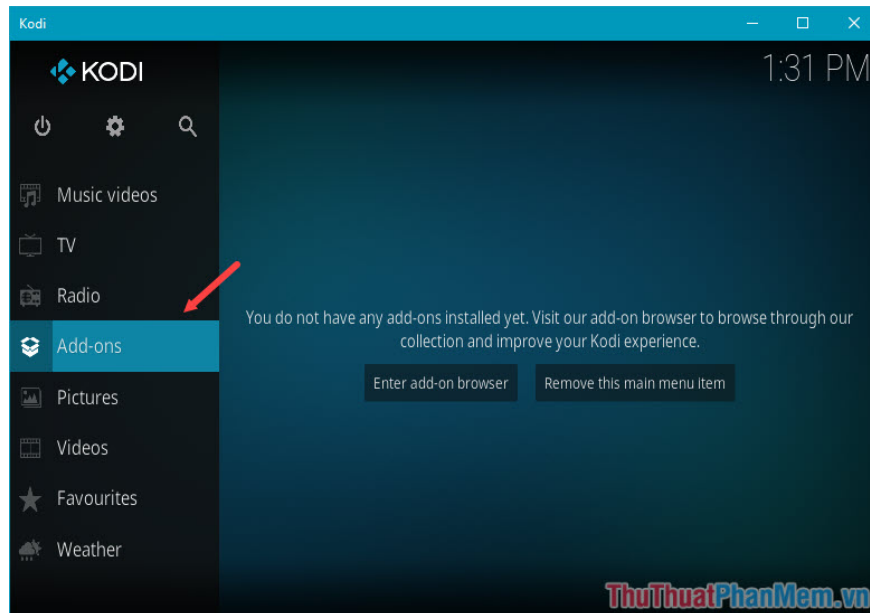

Step 5: Select the item **Add Source** .

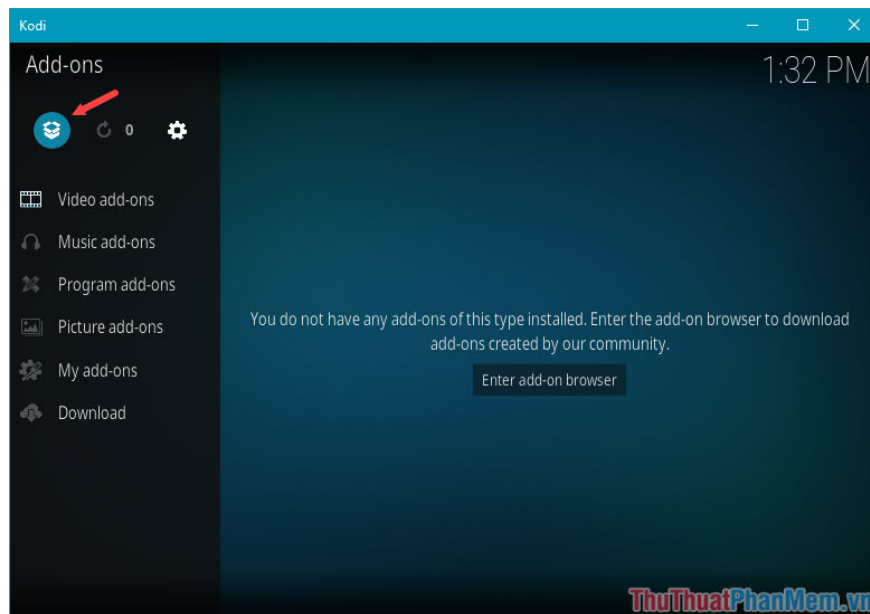

Step 6: You add the source website **repo.kodi.tv** in the order as shown below. Name the source to your liking under **Enter a name for this media source** . Finish, you click **OK** to finish.

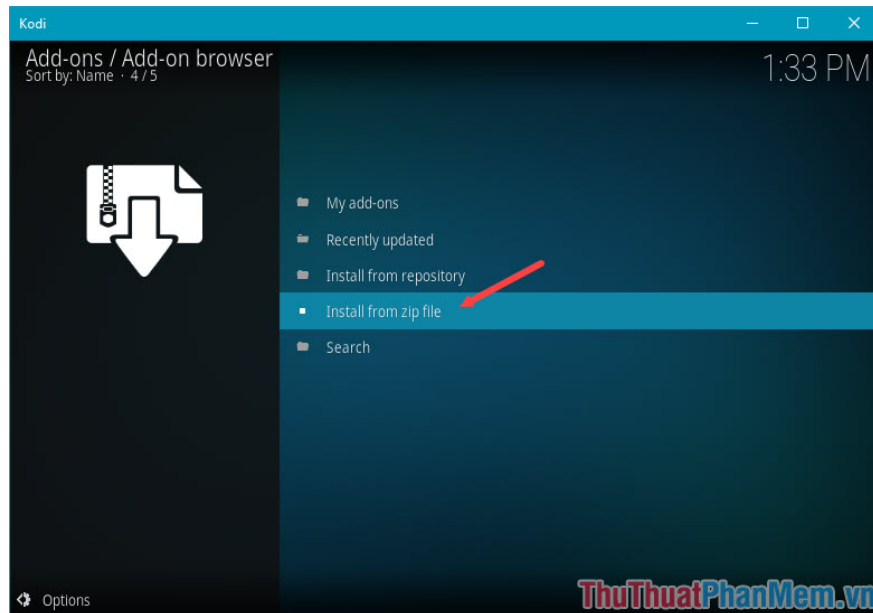

Step 7: Go back to the main menu and navigate to the **Add-ons** section .

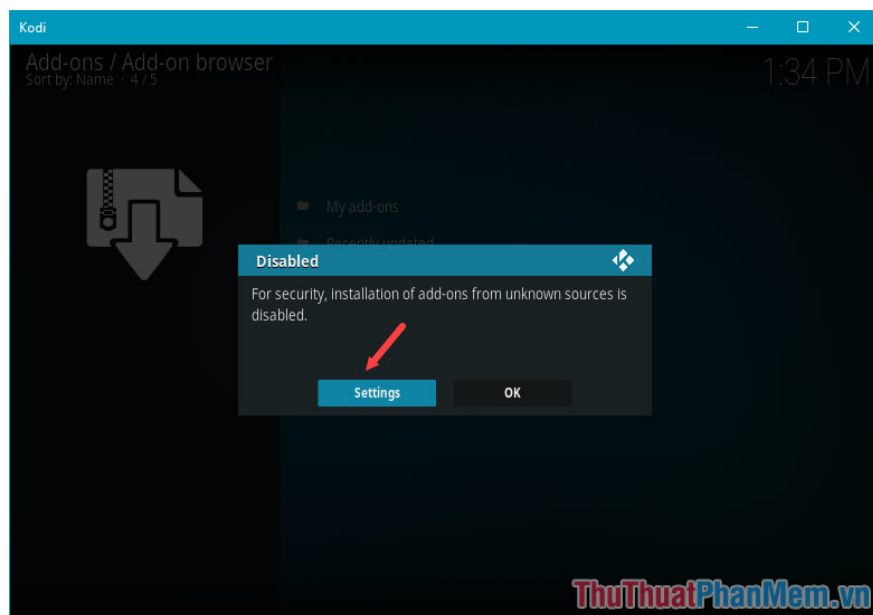

Step 8: Click on the box icon as shown below.

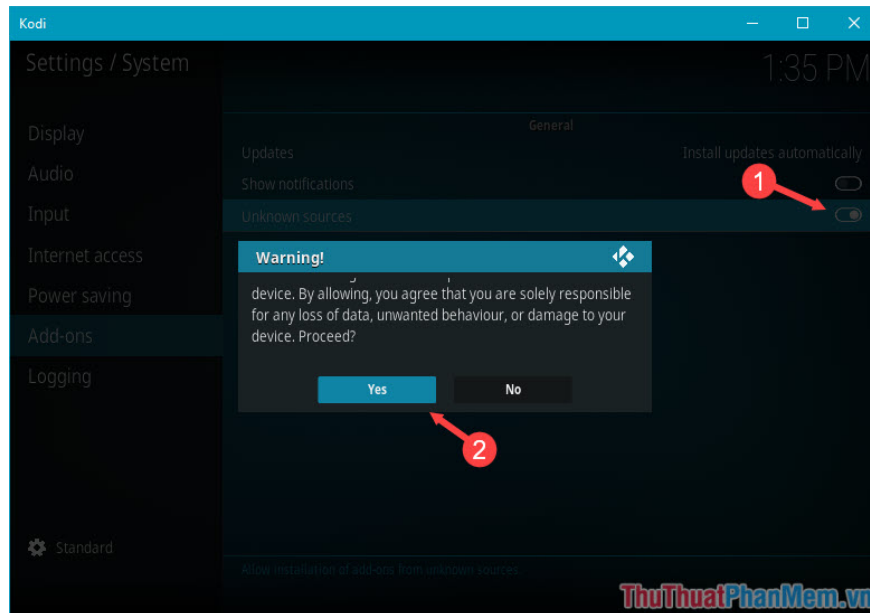

Step 9: Select **Install from zip file** .

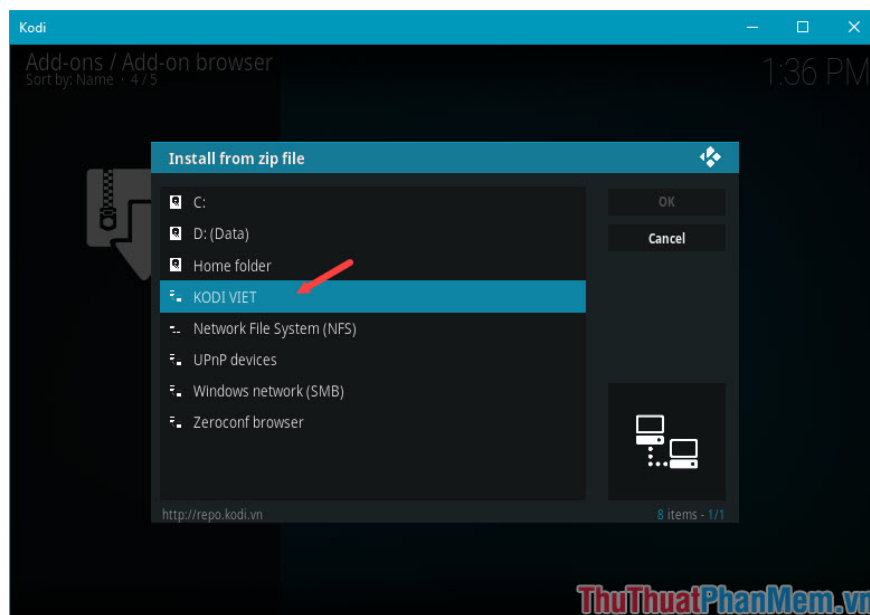

Step 10: By default, KODI software will not allow you to install applications from external sources (**Unknown source**). After clicking on **Install from zip file**, there will be an warning for installing unknown sources, click **Settings** as shown.

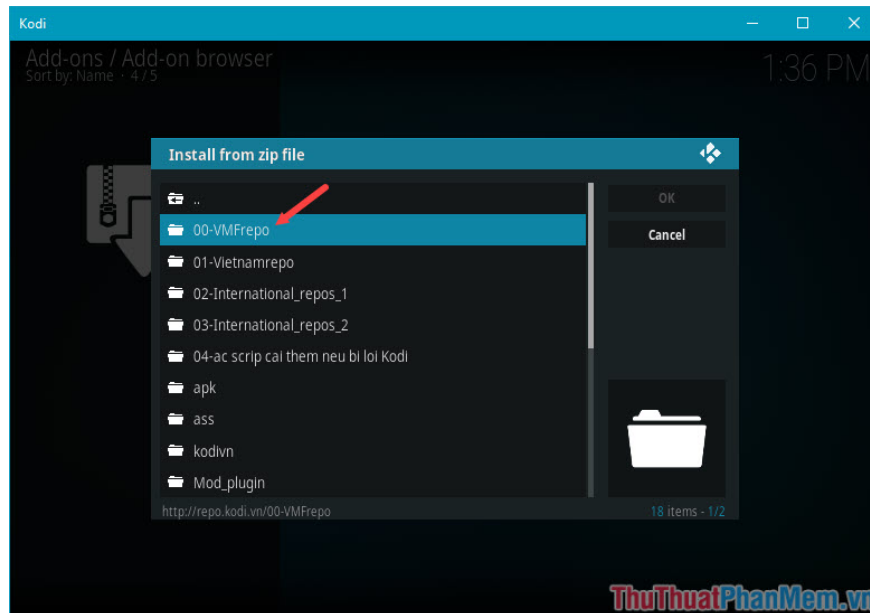

Step 11: Switch the **Unknown sources** switch to **On** . When the message appears, click **Yes** .

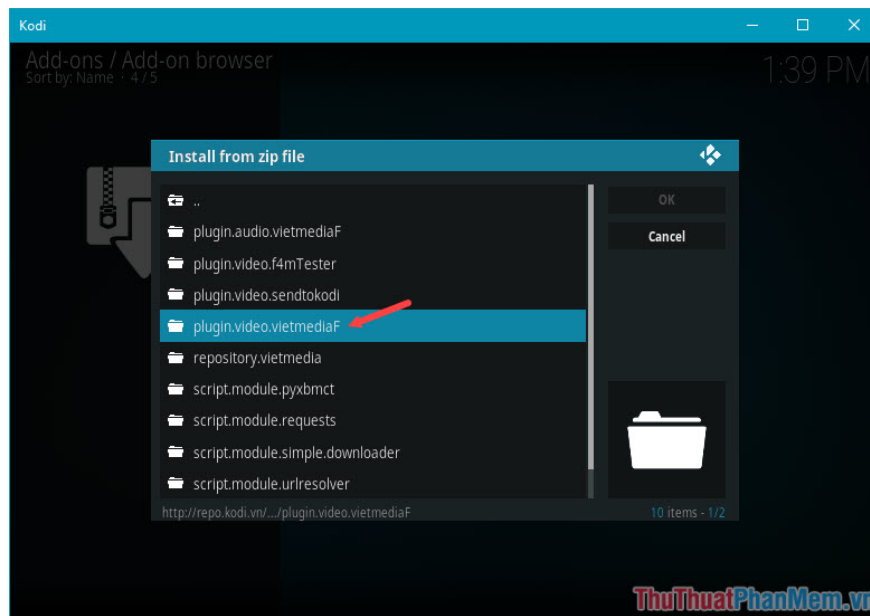

Step 12: You press the **Backspace** or **Esc** key on the keyboard to return to the previous menu. After clicking on **Install from zip file**, you find the folder that we added in the **Add Source** (The folder in the article is KODI VIET).

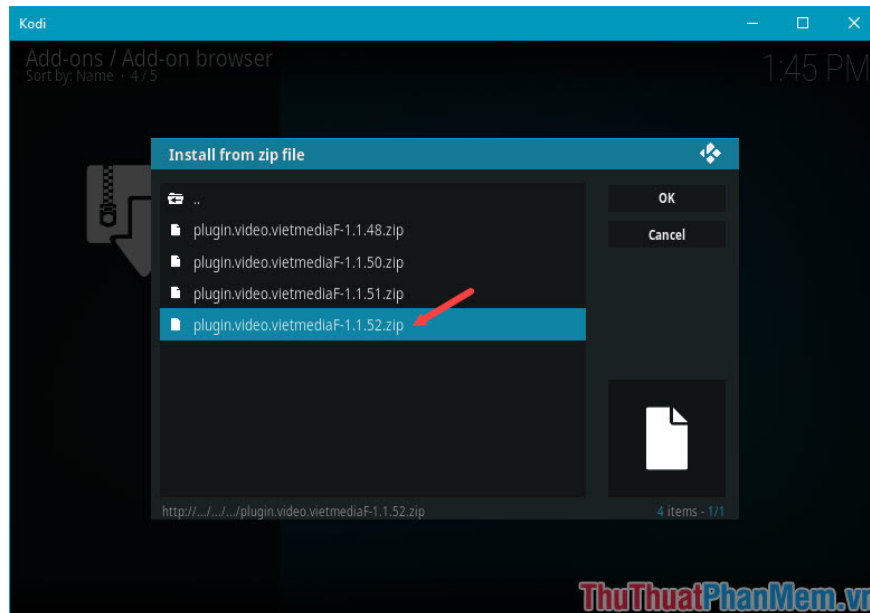

Step 13: You select the item **00-VMFrepo** .

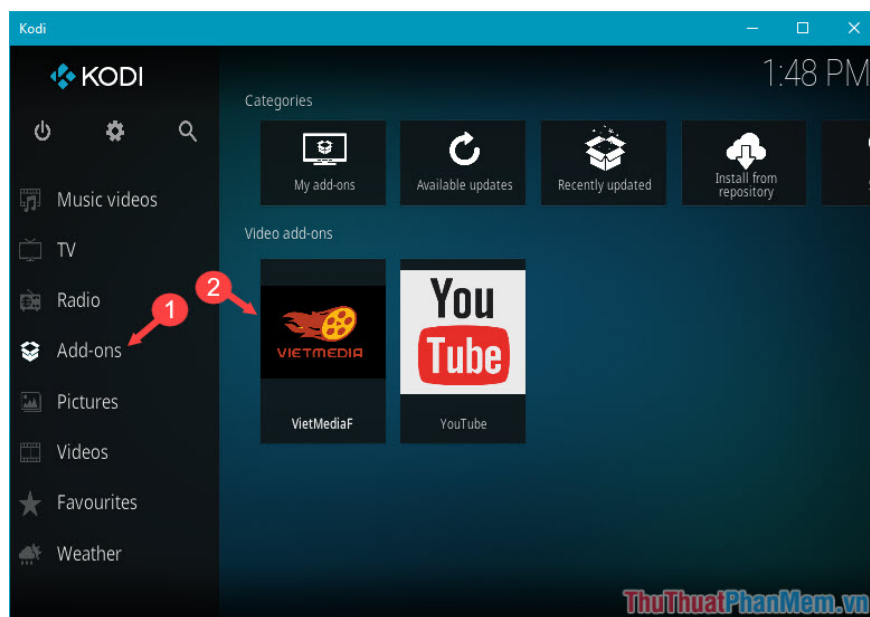

Step 14: Select **plugin.video.vietmediaF** section .

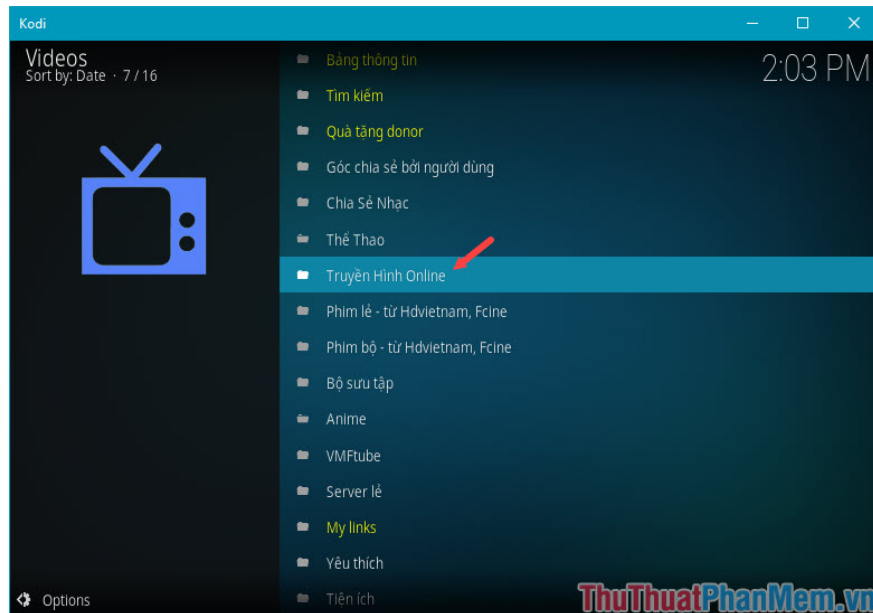

Step 15: You choose the appropriate version, here I choose the latest version is **1.1.52** .

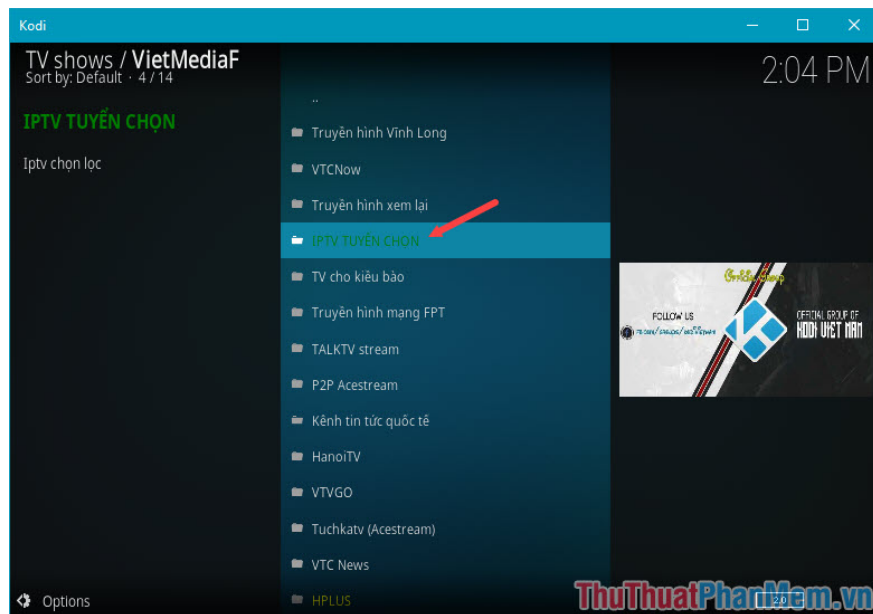

Step 16: Wait a while for the Add -ons to download, you go back to the main menu and move to the Add -ons section, the VietmediaF utility will appear. You click that VietmediaF add -ons.

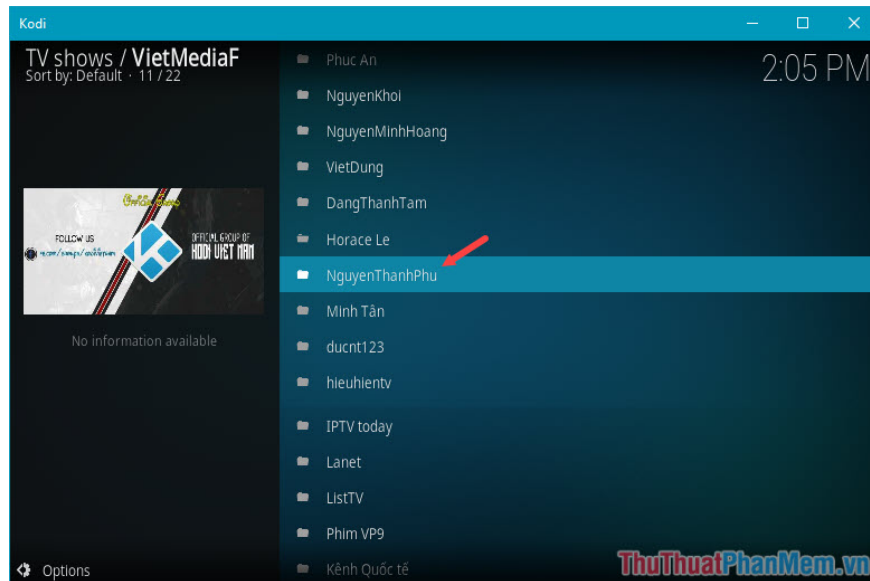

Step 17: Go to **Television Online** .

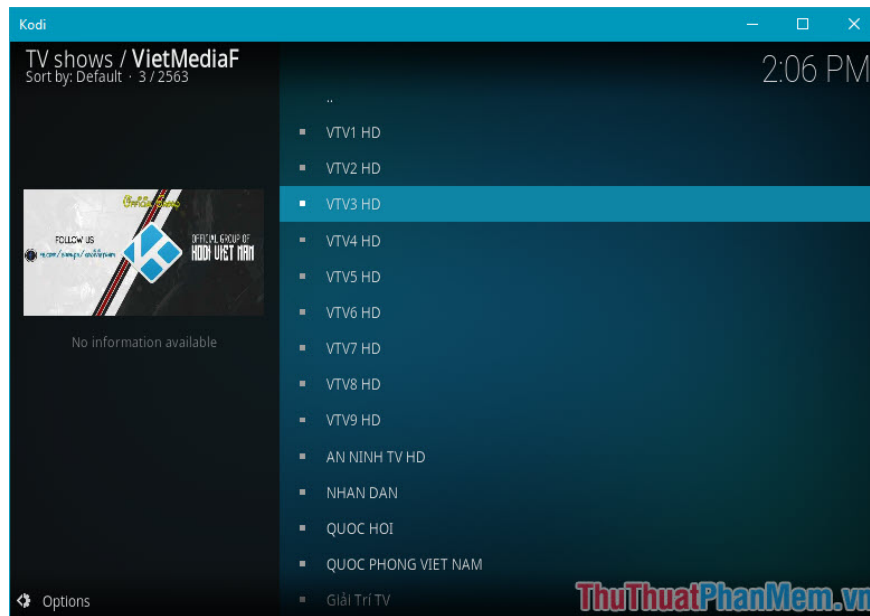

Step 18: Go to select IPTV section .

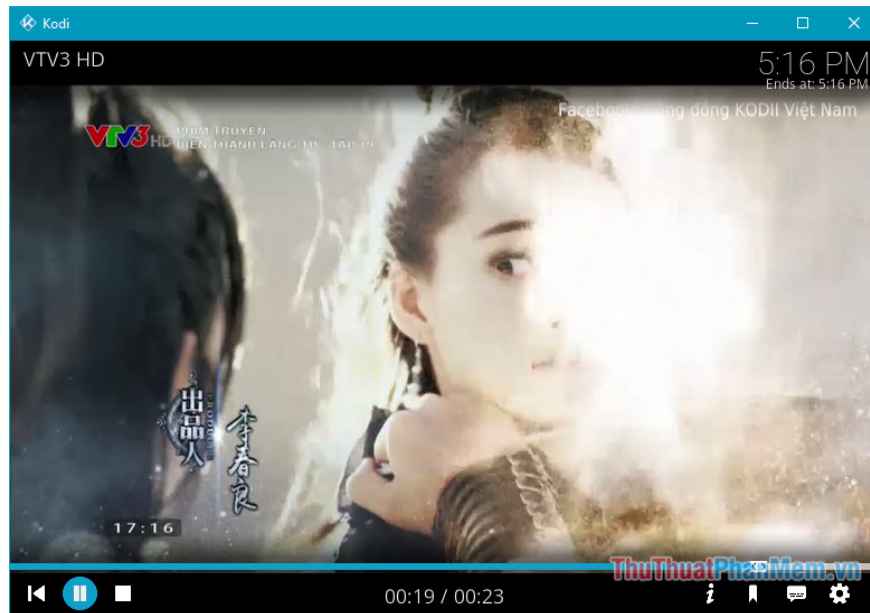

Step 19: You select the channel list named **NguyenThanhPhu** will be stable and less faulty channels than other lists.

Step 20: Here you can select the channel you want by moving up and down and press Enter to open the channel.

I will try to open VTV3 channel and the result as shown below is that you are done.

Watching TV on computer using Kodi software is easy, isn't it! The tutorial is quite long and detailed, suitable for first-time users of Kodi software. Thank you for watching my tutorial and wish you have fun entertaining time with your beloved PC!
