

How to write text by voice on macOS

On macOS, there is a built-in Dictation feature to help you input Vietnamese voice without the user having to type manually.

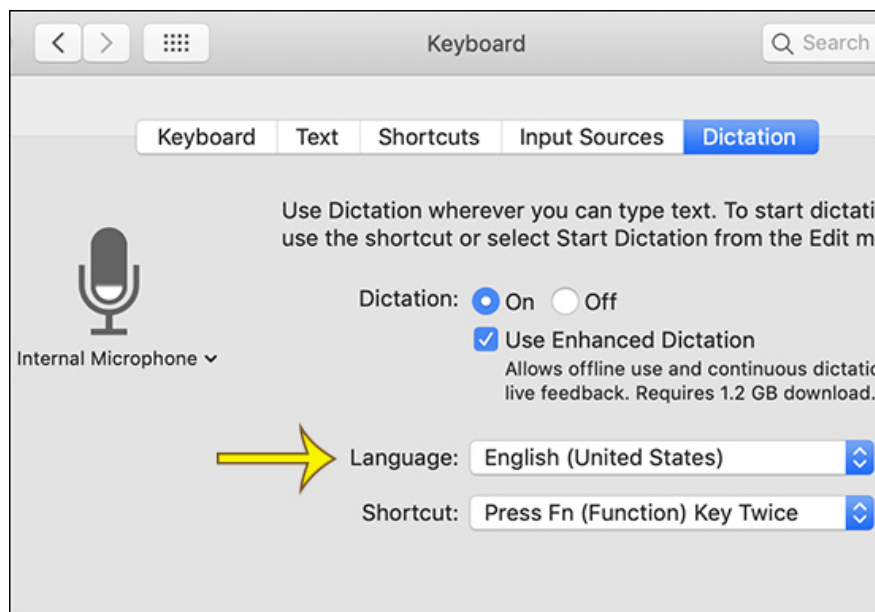

On macOS, there is a built-in Dictation feature to help you input Vietnamese voice without the user having to type manually. Voice input has been used for a long time and has been used in many drafting applications such as composing voice content on Google Docs, or translating directly via voice on Google Translate. And with this Dictation feature, importing content on macOS also saves time and operations. The process of changing input languages is also quick without re-accessing the settings. The following article will guide you how to use the Dictation feature on macOS.

How to input text by voice on macOS

Step 1:

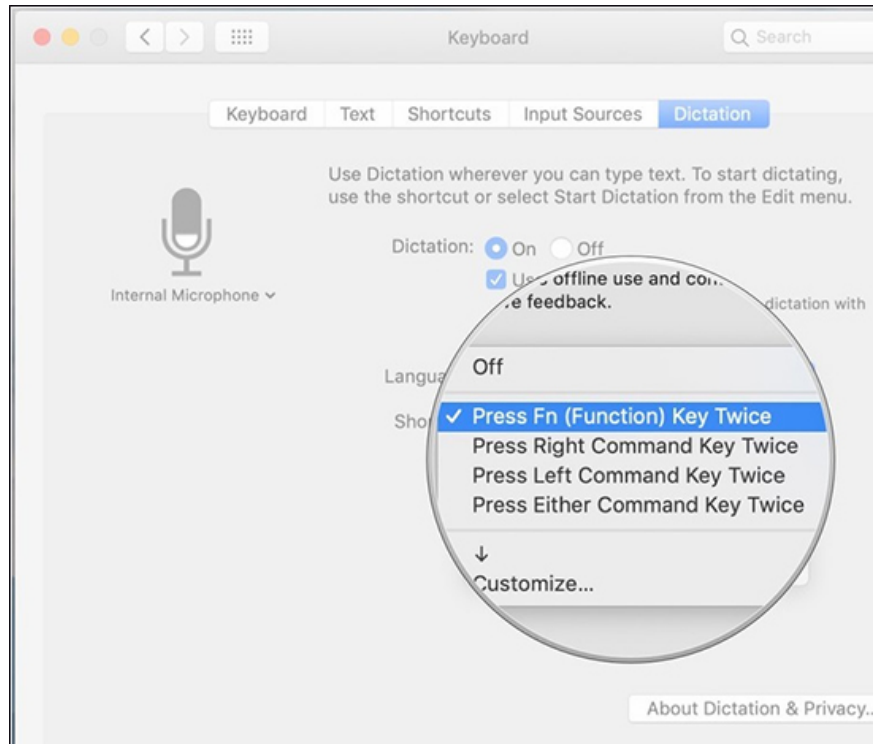

To **enable Dictation** on macOS, users can access **Setting > Keyboard > Dictation > ON**. Then we wait a few minutes for the system to load data.

Next in this interface to change the language into Vietnamese, the Language section we select Vietnamese in the list to switch to Vietnamese. You also need to wait for the system to load data.

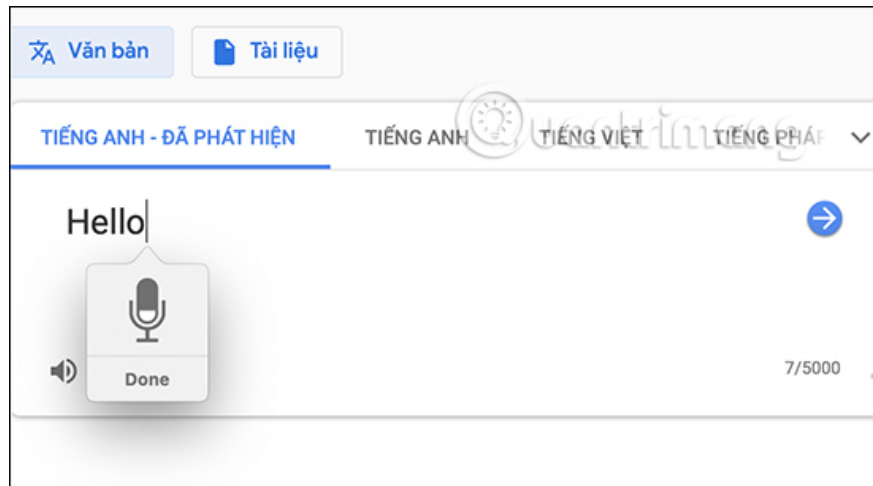

Step 2:

You can also change **the shortcut that activates the voice capture icon** . By default, macOS sets the Fn key to activate. If you want to change the activation key, **at Shortcut** we click to display the shortcut menu to support use.

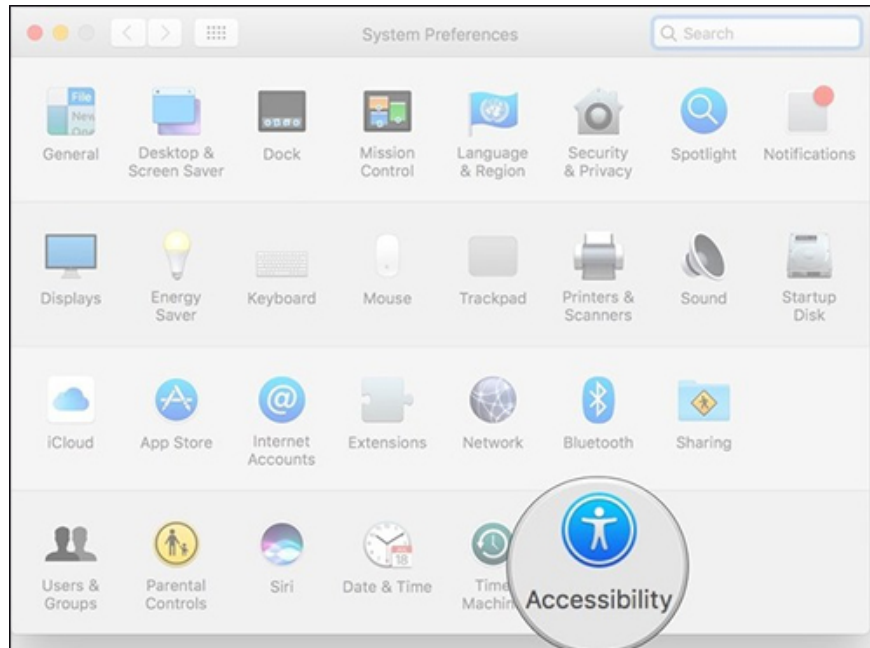

Step 3:

Dictation feature will integrate into the system and use in any input. You press the set shortcut, immediately **display the microphone icon** to record voice and convert into text.

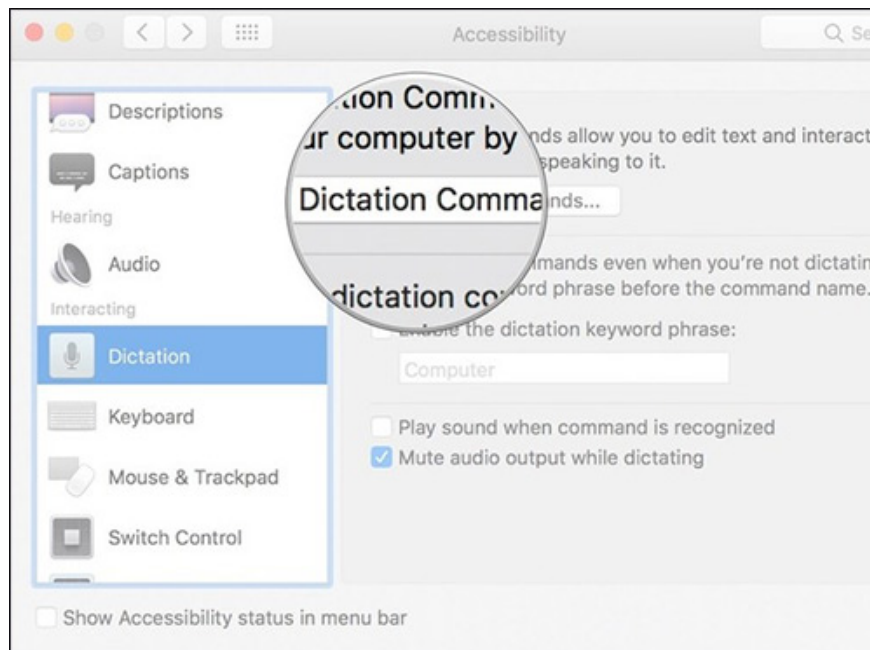

Step 4:

To **control the spell checking feature on Dictation** , click **the Apple icon** , select **System Preferences** , then tap **Accessibility** in the displayed list.

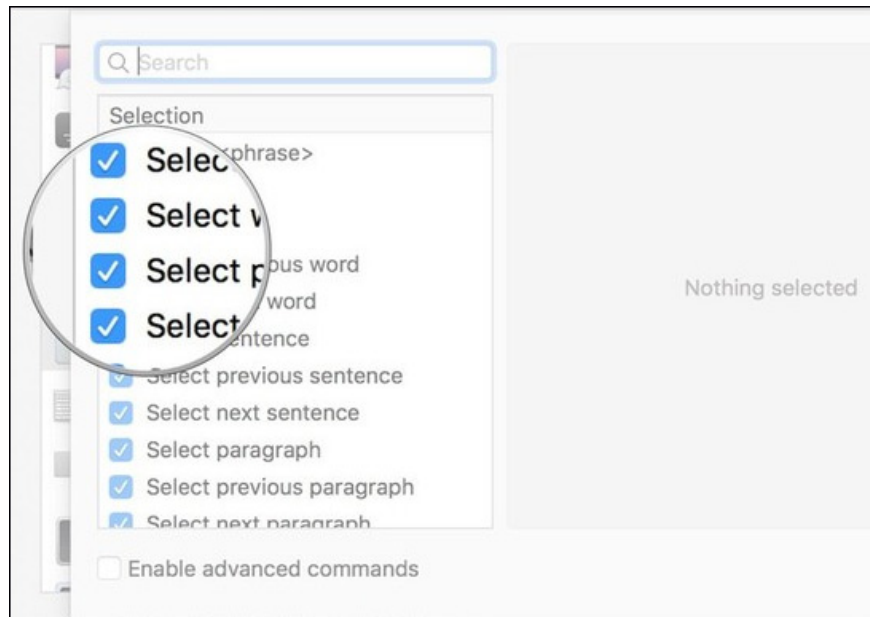

Step 5:

In the new interface you click on **Dictation** and then look to the right click on **Dictation Commands** .

Now, the default spelling checker is enabled for Dictation. Ideally, you should **turn off all of these editing options** and then click OK for more convenient voice editing.
