

# How to zoom in on a specific location in a screenshot on iPhone

Taking a screenshot is one of the basic tasks that probably any iPhone user has ever used.

However, not many people know that iOS also offers options to help customize screenshots on iPhone, as well as highlight certain content in photos. Let's find out how to proceed right below.

Step 1: The first thing you have to do is take a screenshot on your iPhone.

Step 2: Tap the floating screenshot at the bottom left of the screen.

Step 3: Click the (+) button and then select the Magnifier option.

Step 5: Now tap the (+) button again and choose Opacity.

Step 6: You will see a slider at the bottom. Just drag it to the right, you will see that the entire screenshot has been blurred except for the area you have set as focus as stated above.

Step 7: Just tap Done to save the screenshot.

It's all simply that. You now have a unique custom screenshot, with a special area in the image highlighted and enlarged. You can share or archive this photo as usual.

Hope you are successful.
