

HP 2133 Mininote - netbook using Vista operating system

The mini laptop of the American computer maker is as compact as a notebook but beautifully decorated, youthful with hardware suitable for web surfing, communication and entertainment needs.

The mini laptop of the American computer maker is as compact as a notebook but beautifully decorated, youthful with hardware suitable for web surfing, communication and entertainment needs.

Although "born late", 2133 Mininote with bright colors inherits many outstanding features such as 8.9 inch screen with 1,280 x 768 pixel resolution, a keyboard equal to 92% of standard size and mouse scrolling table (touch pad) wide and quite fancy.

The system is equipped with Via 1.6 GHz processor, 1 GB RAM, 120 GB hard drive and works on Linux or Windows Vista operating systems (usually netbook lines only use Windows XP due to machine configuration strong enough).

2133 Mininote is in the "right heart" campaign that HP is working on to conquer young people. Products are exclusively distributed by CMC Distribution Company in Vietnam.
