

HP Chromebook 11 supports LTE 4G

According to Engadget on Jan. 16, the HP Chromebook 11 is a commercially available HP computer in October 2013, using Chrome OS welding systems and priced at just \$ 279 (this version does not support LTE 4G).

Best Buy retailer has just sold a version of HP Chromebook 11 with 4G LTE super-fast technology.

HP Chromebook 11 has added support for LTE 4G

According to *Engadget* on Jan. 16, the HP Chromebook 11 is a commercially available HP computer in October 2013, using Chrome OS welding systems and priced at just \$ 279 (*this version does not support LTE 4G*).

In terms of configuration, HP Chromebook 11 is equipped with an 11.6-inch screen with IPS panel that achieves a resolution of 1,366 x 768 pixels, weighing about 907 grams. The device uses Samsung Exynos 5250 dual-core Cortex-A15 processor with 1.7 GHz speed, 2 GB RAM, Bluetooth 4.0 support, Wi-Fi a / b / g / n, USB 3.0, SSD 16 GB and use 30 Wh battery (*with continuous use time of about 6 hours*).

Unlike Windows and Mac laptops, Chromebooks rely on seamless Internet connectivity to perform tasks running Gmail, Google Docs and other online services.

A special feature of Chromebook 11 is the ability to support charging by microUSB port commonly used on mobile devices such as smartphones.

With the HP Chromebook 11 version incorporating 4G 4G super-fast network technology, it will cost \$ 379.
