

HP continues to be curious about Slate

HP's tablet runs smoothly with simple high-definition, flash-playing video games and runs well on AIR applications.

HP's tablet runs smoothly with simple high-definition, flash-playing video games and runs well on AIR applications.

Slate supports flash, this is definitely not surprising to anyone since the information on this machine running Windows 7 appears. However, the new videos released by HP and Adobe have completely "fascinated" the followers. Slate runs smoothly in high definition videos, simple flash games and runs well on AIR applications (Adobe AIR is a multi-platform development environment that a web developer can develop a desktop-based application).

The version of the running machine operating system has been modified some more suitable from the Windows 7 operating system. The device is capable of using Intel Atom processor and HD Crystal graphics technology from Broadcom. Along with the introduction video, HP also released a commercial introduction clip, just a day after Apple also introduced the iPad's official commercial.

Below are two videos of Slate released by HP.
