

HP Elitebook 8460p with 32.5 hour battery

This laptop model can be operated for more than 30 hours due to being equipped with a standard 9 cell battery and an extended battery HP BB09.

This laptop model can be operated for more than 30 hours due to being equipped with a standard 9 cell battery and an extended battery HP BB09.

The Elitebook 8460p is capable of operating within 32.5 hours depending on configuration and customization. *(Photo: Notebookcheck).*

HP has just introduced a new laptop called the Elitebook 8460p in California (USA). A special feature of this model is the ability to operate for up to 32.5 hours depending on the configuration, connection options, power management, running applications and different models.

For 32 hours of continuous operation, users must purchase a standard 9-cell HP battery along with an extended HP BB09 battery. In addition, the device must also have the latest Intel graphics driver with HP BIOS. This laptop model must be equipped with an Intel graphics card, an HP LED HD screen, Windows 7 operating system

and an option of an 160GB Intel SSD.

Currently, it is still unclear the date of issue and the selling price of the product.
