

# HP Mini - Laptop for education and family

HP Computer Korea introduced the ultra-light laptop called Mini, which costs less than \$ 500. The HP Mini hand book machine, called HP2133, weighs only 1.19kg, making it more dynamic when moving.

**HP Computer Korea introduced the ultra-light laptop called Mini, which costs less than \$ 500.**

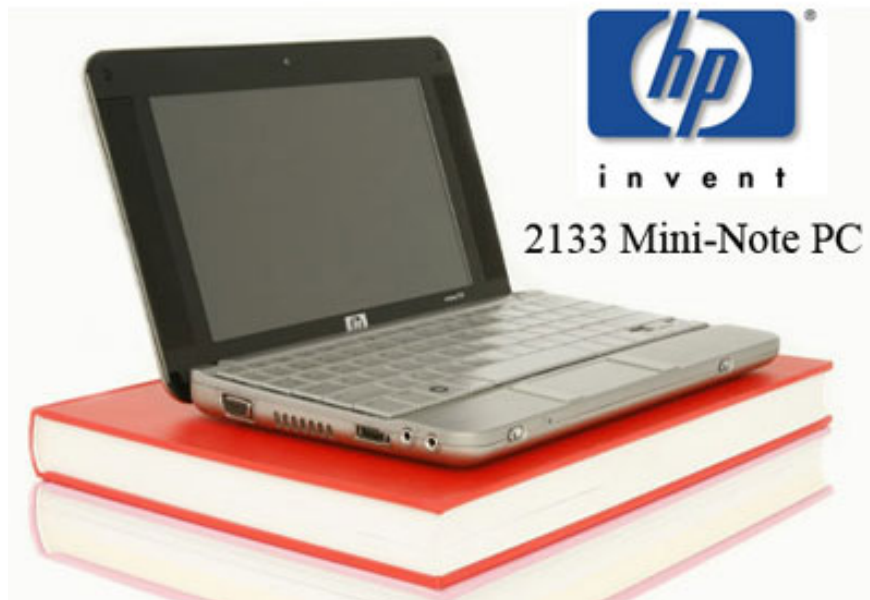

The HP Mini hand book machine, called HP2133, weighs only 1.19kg, making it more dynamic when moving. Built-in 8.9-inch display screen. The exterior of the machine is coated with aluminum to create lightness and pleasant feeling when using the machine.

Mini aims at the target market of education and families, helping students to afford to own a laptop.

*' HP has listened to what we need and is now distributing a technology product designed for education. Teachers and technology are two important factors in education. The announcement introduces HP's new computer model that has proven itself from what technology schools need , "said Chris Sieger, head of technology at Alexandria City Public Schools in Virginia, USA. .*

HP Mini is much lighter in weight than many math or science books but can support users to study anywhere, from school to home or in practical study sessions. It supports wireless network connectivity, wifi, normal entertainment features and information security.

HP 3D DriveGuard technology support device allows the device to turn off the hard drive when a shock occurs or instantaneous movements. The machine is expected to be available in the market this month.
