

HP's first Ultrabook launched at 27 million

Yesterday 10/3, HP's first ultrabook computer called Folio 13 officially launched Vietnamese consumers for about 27 million VND.

Yesterday 10/3, HP's first ultrabook computer called Folio 13 officially launched Vietnamese consumers for about 27 million VND.

>>>HP's first Ultrabook in Vietnam

The HP Folio 13 partially achieves the criteria of a 'superportable' product with an 18mm thin and lightweight design of only 1.5kg, long battery life of up to 9.5 hours and up to 1 week in standby mode.

According to the parameters provided by HP, the machine has a 13.3-inch screen, 2nd generation Intel Core i5 processor with 1.6GHz clock speed, 4GB of DDR3 RAM memory, Intel HD integrated graphics card Graphic 3000, supports Wi-Fi 802.11 b / g / n network.

HP chose 128GB solid-state drive (SSD) instead of hard drive (HDD) to reduce weight and increase performance and speed of data processing. However, using SSD instead of HDD has also increased product costs.

The device is also equipped with USB 2.0 and USB 3.0, 6-cell Lithium-Ion battery and Windows 7 Home Premium 64-bit operating system.

In addition to its strong performance, multi-connection capabilities, HP Folio 13 is also highly appreciated for its high data security capabilities and advanced technologies such as HP Coolsense that automatically regulate air conditioning and help the device cool, Intel Rapid Start technology makes it extremely fast to boot.

In the Vietnamese market, HP Folio 13 is currently listed at about VND 27 million.
