

HTML color code - color code table in html

The color displayed is a combination of 3 colors red, green and blue. Below is a table of color codes in html and how to use color codes in html

Color name

With CSS, colors can be set using the color name.

Eg:

Color	Name
	Red
	Yellow
	Glauous
	Blue
	Bright red

Color name supported by all browsers

All modern browsers support the following 140 color names (click the color name or hex value, to see the color as a background color along with different text colors):

AliceBlue #F0F8FF	AntiqueWhite #FAEBD7	Aqua #00FFFF
Aquamarine #7FFFD4	Azure #F0FFFF	Beige #F5F5DC
Bisque #FFE4C4	Black #000000	BlanchedAlmond #FFEBCD
Blue #0000FF	BlueViolet #8A2BE2	Brown #A52A2A
BurlyWood #DEB887	CadetBlue #5F9EA0	Chartreuse #7FFF00
Chocolate #D2691E	Coral #FF7F50	CornflowerBlue #6495ED
Cornsilk #FFF8DC	Crimson #DC143C	Cyan #00FFFF
DarkBlue #00008B	DarkCyan #008B8B	DarkGoldenRod #B8860B
DarkGray #A9A9A9	DarkGrey #A9A9A9	DarkGreen #006400
DarkKhaki #BDB76B	DarkMagenta #8B008B	DarkOliveGreen #556B2F
DarkOrange #FF8C00	DarkOrchid #9932CC	DarkRed #8B0000
DarkSalmon #E9967A	DarkSeaGreen #8FBC8F	DarkSlateBlue #483D8B
DarkSlateGray #2F4F4F	DarkSlateGrey #2F4F4F	DarkTurquoise #00CED1
DarkViolet #8400D3	DeepPink #FF1493	DeepSkyBlue #00BFFF
DimGray #696969	DimGrey #696969	DodgerBlue #1E90FF
FireBrick #B22222	FloralWhite #FFFAF0	ForestGreen #228B22

CSS Color Values

With CSS, colors can be specified in a variety of ways:

1. By color name
2. As RGB value
3. As a hexadecimal value
4. As HSL (CSS3) value
5. As HWB value (CSS4)
6. With keyword currentcolor

RGB color

RGB color values are supported in all browsers.

RGB color values are specified with: `rgb (RED, GREEN, BLUE)`.

Each parameter that defines the intensity of the color is an integer between 0 and 255.

For example, `rgb(0,0,255)` is displayed as blue, because the blue parameter is set to the highest value (255) and the other parameters are set to 0.

Eg:

Color	RGB	Color
	<code>rgb(255,0,0)</code>	Red
	<code>rgb(0,255,0)</code>	Green
	<code>rgb(0,0,255)</code>	Blue

Shades of gray are usually determined using equal values for all 3 light sources:

Eg:

Color	RGB	Color
	<code>rgb(0,0,0)</code>	Black
	<code>rgb(128,128,128)</code>	Grey
	<code>rgb(255,255,255)</code>	White

Hexadecimal color

Hexadecimal color values are also supported in all browsers.

Hexadecimal colors are specified with: #RRGGBB.

RR (red), GG (green), and BB (blue) are hexadecimal integers from 00 to FF specifying the intensity of the color.

For example, #0000FF is displayed as blue, because the blue component is set to the highest value (FF) and the others are set to 00.

Eg:

Color	HEX	RGB	Color
	#FF0000	rgb(255,0,0)	Red
	#00FF00	rgb(0,255,0)	Green
	#0000FF	rgb(0,0,255)	Blue

Shades of gray are usually determined using equal values for all 3 light sources.

Eg:

Color	HEX	RGB	Color
	#000000	rgb(0,0,0)	Black
	#808080	rgb(128,128,128)	Grey
	#FFFFFF	rgb(255,255,255)	White

Note: You can use uppercase or lowercase letters to specify hexadecimal values. Lowercase letters are easier to write, and uppercase letters are easier to read.

keyword currentcolor

The currentcolor keyword refers to the color property value of an element.

For example, the border color of the following element would be blue because the element's text color is blue:

```
#myDIV { color: blue; /* Blue text color */ border: 10px solid currentcolor; /*
```
