

HTML DOM element in AngularJS

The directives below can be used to bind application data to attributes in the HTML DOM element.

The following AngularJS directives can be used to bind application data to attributes in the HTML DOM element.

1. **ng-disabled:** Disabling a control (control) provided
2. **ng-show:** Displays a control provided
3. **ng-hide:** Hide a control provided
4. **ng-click:** Performing a click event in AngularJS

Ng-disabled Directive in AngularJS

Add ng-disable attribute to an HTML button and attach this data to the model. Mount the model to a checkbox to observe the change.

```
span=""> type = "checkbox" ng-model = "enableDisableButton" > Disable button  
span=""> ng-disabled = "vohieuhoakichhoatnut" > Nhan vao day!
```

Ng-show Directive in AngularJS

Add the ng-show attribute to the HTML button and attach it to the model. Mount the model to a checkbox to observe the change.

```
span=""> type = "checkbox" ng-model = "showHide1" > Show button  
span=""> ng-show = "showHide1" > Click here!
```

Ng-hide directive in AngularJS

Add ng-hide attribute to the HTML button and attach it to the model. Mount the model to a checkbox to observe the change.

```
span=""> type = "checkbox" ng-model = "showHide2" > Hide the button  
span=""> ng-show = "showHide1" > Click here!
```

Ng-click directives in AngularJS

Add the ng-click attribute to the HTML Button and attach it to the model. Mount the model to html to observe the change.

```
Total clicks: {{clickCounter}}
```

```
span=""> ng-click = "clickCounter = clickCounter + 1" > Click here!
```

For example

Here is an example for the description mentioned above.

phantuHTMLDOM.html

HTML DOM trong AngularJS

For example

AngularJS QTM

```
span=""> ng-app = "" >
```

```
span=""> ng-disabled = "enableDisableButton" > Nh?p vào ?ây!
```

```
T?ng s? l?n nh?p: {{ clickCounter }}
```

```
span=""> ng-click = "clickCounter = clickCounter + 1" > Nh?p vào ?ây!
```

Result:

Open the phantuHTMLDOM.html page on the web browser and see the results. If you click on the buttons one at a time, the result will be:

Ví dụ AngularJS QTM
