

iCloud interface changes iOS 7 style

Apple has officially converted the entire interface of iCloud service, with design and style bearing the stamp of iOS 7.

Apple has officially converted the entire interface of iCloud service, with design and style bearing the stamp of iOS 7.

iCloud.com has officially brought the interface of iOS 7 - (*Screenshot*)

According to *SlashGear* on September 17, currently when users access to **iCloud** site, the entire interface of this service is similar to the design on **iOS 7**.

Besides, iCloud.com with the new interface also improves features like Mail, Contacts, Calendar, Notes, Reminders and Find My iPhone.

As known, iCloud is Apple's free cloud service to synchronize data between iOS devices (iPhone, iPad, iPod .) or devices running Mac OS.

Besides, iCloud.com can synchronize Safari's contacts, calendar, email or bookmarks between iOS device and computer or allow storing documents, images, music and backup iOS devices.

iCloud.com also has a feature called **Find My iPhone**, which helps users determine where their iPhone is, in order to find the location of the device if unfortunately lost.
