

# Icon in CSS

This article introduces a few ways to add icons to HTML pages.

## How to add icons

The easiest way to add icons (icons) to HTML pages is to use the icon library. Just like Font Awesome, just add the name of the icon class to any inline HTML element (as well). *All the icons in the icon library below are in vector format that can be scaled in CSS (size, color, shadow .)*

## Font Awesome Icon

To use Font Awesome's icon, add the following line to the section in the HTML page. You do not need to download or install anything.

Example of the icon with Font Awesome

*Images of icons in the example on the browser*

## Bootstrap Icon

To use Bootstrap's icon, add the following line to the section in the HTML page. This way there is no need to download or install anything.

Example icon with Bootstrap

*Bootstrap is a popular choice to get icons for HTML pages*

## Google Icon

To use Google Icon, add the following line to the section in the HTML page. As with the above two ways, you do not need to download or install anything.

Example Google Icon

*cloud*

*favorite  
attachment  
computer  
traffic*

*Google also has its own icon library for developers*
