

If you do division by 0 on a computer, what will happen?

The video in the lesson will show you how crazy the computer is when doing calculations divided by 0.

When a user enters a division command for 0 on a modern computer, it will display a 'cannot be divided by 0' error. But with a mechanical machine, when it receives an instruction to perform a division calculation by 0, it will And, of course, with the number of reductions equal to the natural number, this calculation will never run out.

Check out the video below to see just how crazy a computer is when doing calculations divided by 0.
