

Ignore the 'wait' phase, here is how to upgrade Nexus to Android Nougat right away

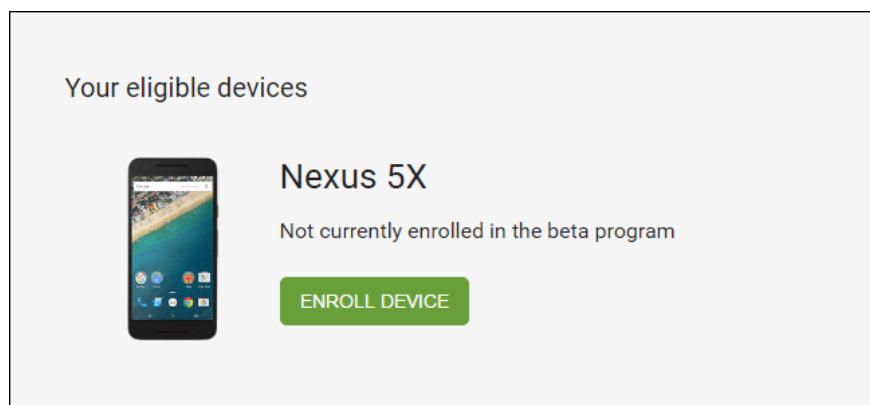

The complete Android Nougat version has been released by Google. However, not all devices that support Android Nougat will be updated on the same day, the update time will depend on each company. And if your Nexus hasn't received an upgrade notice, here's how to upgrade Nexus to Android Nougat right away and without having to 'wait' the notification.

The complete Android Nougat version has been "released" by Google. However, not all devices that support Android Nougat will be updated on the same day, the update time will depend on each company.

And if your Nexus has not received an upgrade notice, here's how to upgrade Nexus to Android Nougat version right away and without having to 'wait' the notification.

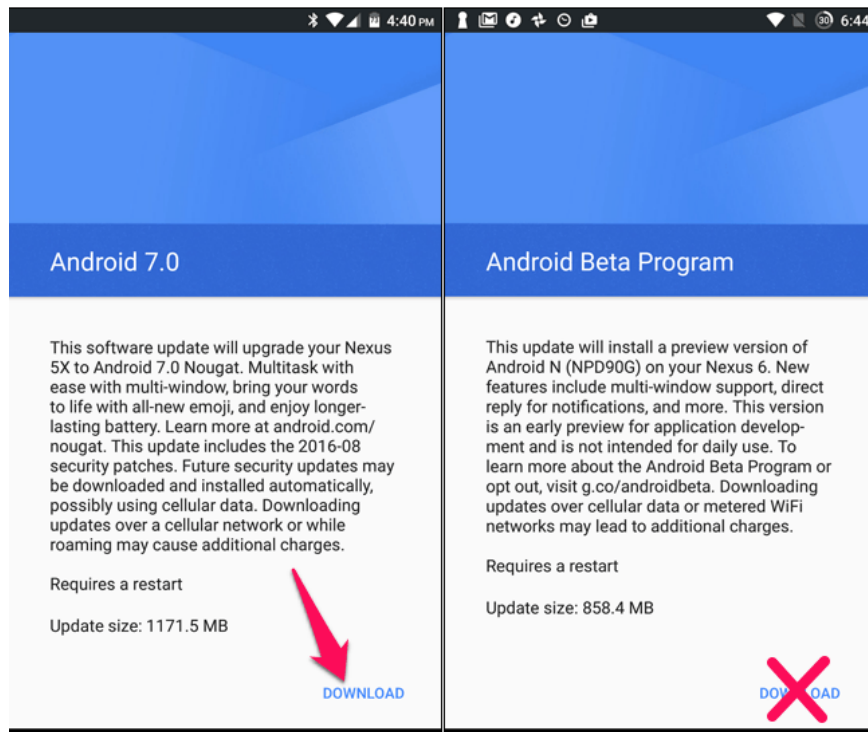

Step 1: Register Android Beta Program

First open any browser on your phone, then navigate to this site and log in to your Google account. You should now see a list of eligible devices in the bottom of the list. Just click the **Enroll Device** button to register for the Beta.

Step 2: Download and install the update

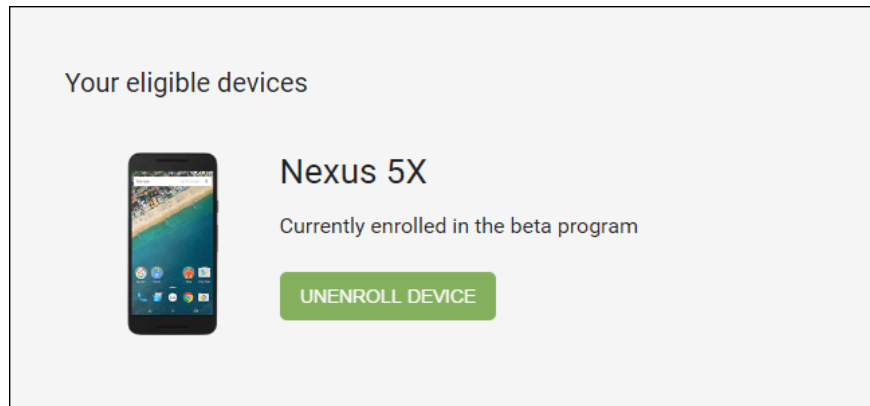

You will soon receive an update message on your phone. Click on the notification to see more update information.

If you see the notification screen as shown in the image on the left, it means that Google has released an update for your device, click **Download** to continue. If the message looks like the image on the right, this is just a build, so don't be fooled and click Download.

After downloading and installing Android Nougat, you will experience some new features on your device.

Step 3: Cancel registration of Beta Program

After updating Android Nougat, go back to the beta enrollment page and click the **Unenroll Device** button. Once you have updated the Android Nougat version, you will not need to use the Beta Program anymore, so you can cancel the Beta Program registration.
