

# 'Immune to poison' These 7 predators eat poisonous snake meat as easily as ... 'eat candy'

With the special favor of mother nature, these predators are given a valuable 'immune to poison' gift that can kill and eat poisonous snakes without worrying. both.

With the special favor of mother nature, these predators are given a valuable 'immune to poison' gift that can kill and eat poisonous snakes without worrying. both.

1. There are 50 venomous snakes, this is the most unique snake on the planet
2. I have the unique venom in the world of snakes, the sea snakes are eating again and again in a moment

## 1. Hedgehog porcupine - porcupine hedgehog

With a high venom immunity (25 times more resistant to human poisoning) and a powerful armor that is full of spiky fur, Hedgehog hedgehogs can kill and eat a poisonous snake.

When confronted with poisonous snakes, the hedgehog curled up, ruffled the sharp spikes and attacked and tried to plug its sharp teeth into the snake's neck. But the porcupine must prevent poisonous snakes from biting into the snout otherwise they can die.

## 2. Mongoose (Mongoose)

Equipped with thick fur that can resist snake poisons 20 times more than mice, the ability to quickly evade, bite and attack accurately with powerful venom, mongoose becomes the natural enemy of snakes. They can easily kill a 3m cobra snake.

The mongoose has a special snake hunting trait, they often 'fascinate' their prey with staring, making the snake immobile and then attacking.

Although it is not possible to completely immunity to venom, but like a honey bee badger, the civet also recovers if it is hit by a snake and eats the snake.

### **3. Badger honey (Ratel)**

In the natural world, honey badger is famous for being a 'madman', with thick skin, immunity to venom and sharp teeth, they can hunt poisonous snakes even against a lion.

With immunity to all types of snake toxins, badger honey is the most feared enemy of poisonous snakes. When hungry, the badger 'honey' devoured a 1.5-meter-long snake in just 15 minutes.

If unfortunately the snake bites unconscious, after about 2-3 hours the badger honey can recover and eat the killed snake. The amazing thing is that it also uses the poison of the snake itself to kill another snake.

#### **4. Kitebird (Secretarybird)**

Snakes are the favorite prey of this bird, so they are called snake-eating kites. Do not fly high to find prey like other birds, they often roam the ground to find and attack prey.

The bird has an eagle-like body that can spread its wings in the air and long cranes-like legs that are able to resist the prey of the prey. When the prey was discovered, the kite quickly approached and killed the snake with strong and precise kicks.

#### **5. Eagle (Circaetus)**

The eagle is a carnivorous bird and its favorite prey is other birds and snakes, including the most poisonous snakes like the black mamba snakes.

When the snake was discovered, eagles often attacked from above into the snake's head, using their sharp claws to cause injuries. Although there is no immunity to snake venom, the speed of an eagle attack often avoids snakes of snakes.

## **6. Snake hunting . snake**

Homosexual snakes are not a rare thing. In nature, there are hundreds of snakes that specialize in hunting and eating other snakes.

It can be mentioned as king cobra with strong venom that hunts other tigers, poisonous snakes in South America often become prey of snakes Musurana or king snakes in North America even without venom but prey Their likes are deadly poisonous rattlesnakes.

## 7. Armadillos Pangolin

Pangolin Armadillos is an anteater with super hard and sharp scales in the animal world. Even if you use a gun to fire the scales of the pangolin, the bullet will be bounced back. Thanks to that advantage, the Armadillos can completely use the hard-edged edge to cut off the snake's body and then eat them.
