

Impatience makes you mistake when trying to save your phone, headphones ... getting water

There are times when you need to remember that patience is the most important virtue of man. Impatience makes you mistake when trying to save your phone, headphones ... getting water.

In our lives, the "patience" virtue is considered an important virtue, which everyone needs and especially patience will be necessary in this case.

Sometimes in everyday life, there are things that we cannot anticipate, which can happen unexpectedly, so that we do not react promptly such as electronic devices such as phones, headsets . On a beautiful day, pick up your phone and put your headset in the toilet and let the phone fall into the sink that is filled with water or something more horrifying? Or a glass of water on the desk, you accidentally put it in the cup of water that makes the water drizzle over the table and your expensive laptop?

2. What to do if the iPhone falls into the water?
3. Put your phone down and feel the world around you

In these cases, we simply know how to "rescue" these devices out of the water by unplugging / disconnecting the device, removing the battery (if possible), draining the water, drying, Dry in a dry place and / or place in a sealed rice bag to absorb moisture.

Of course, it is not always possible to save water from electronics, but many, many people have and will make a fundamental mistake that makes phones and headsets can be saved. finally "dead".

The mistakes you are making are: you don't have the patience, the waiting time to dry your phone is not long enough for the phone to revive. Many people are impatient, anxious for their "mobile phone" to bring them out and use a dryer to dry them, but this is often very risky, and if there is activity again, it will cause damage. heavy damage to components such as speaker membranes, microphones or lithium batteries. It should be noted that, when the high temperature of the dryer comes in direct contact with the phone battery or other electronic devices, it is slightly damaged by the service life, if it can be bulging or even explode. .

Most users often use the most common way of letting phones or electronic devices get water in the rice bag to absorb moisture or bring it to dry in a dry place, but the equipment has not been sucked up yet. Humid, we are anxious to turn up to check. This is also very normal and understandable because we are not impatient, everyone has the feeling of being low when he just dropped his things into the water. But if there is still water inside, the phone, the headset will definitely get worse when turned on. At this time, 90% cannot be saved.

The most useful advice for you when electronic devices fall into the water is to wait patiently for the items in the rice bin or in a desiccator for at least 1 day or 2 days for sure. Try to wait another day to make sure your beloved phone is not dead, is this a desirable result?

In cases such as when you accidentally spill soup, energy drinks or any other liquid with salt / other abrasive substances, do you apply the above methods and wait patiently, it is also useless, Because these substances can kill and corrode these devices. Therefore, when you encounter this situation, it is best to quickly shut down, splash and dry off the liquid and quickly bring it to the repair shop.
