

# Important notes when cleaning smartphones

Overall, the way to clean the smartphone is quite simple, but not so that you can do it arbitrarily. This article will summarize some important things to keep in mind when conducting hygiene for your 'easy' love. Invite your reference.

**After a period of use, no matter how careful you are, your 'easy' lover can't avoid getting dirty. And if not clean ( *even if it is only an external form* ), it may affect the aesthetics of the device and potential health risks for users.**

## How to clean the device's touch screen

Overall, the way to clean the smartphone is quite simple, but not so that you can do it arbitrarily. This article will summarize some important things to keep in mind when conducting hygiene for your "easy" love. Invite your reference.

## Disconnect all connections and charge the device

Cleaning should not be performed while plugging in charger connections, headphones, cables connected to computers or other devices. Therefore, the first thing to do is to disconnect all.

## **Power off**

You need to remember that only cleaning the smartphone when you have turned off the power. If you do not know how to do so, please refer to the user manual because each type has a different way of switching off.

And after cleaning, leave the device for 10 minutes and then restart the device to use it.

## **Do not use water directly**

Moisten ( *not dip* ) a corner of the cloth with cold water. Be careful not to splash water on the phone but only dampen the cloth, otherwise you may damage the device.

In addition, care should be taken to avoid close proximity to the phone in extremely wet environments when performing cleaning, such as swimming pools, saunas or shower rooms. High humidity will damage the internal operating parts of the machine.

## **Do not spray water or cleaning solution directly on a smartphone**

Never foolishly carry out direct spraying of water or cleaning fluid on smartphones because this action may wetting some of the device's '*sensitive*' positions.

Besides, you should not use chemical cleaning agents that are marketed to clean smartphones, even regular soap and especially those containing alcohol, ammonia or other abrasives. These common household detergents can damage the touchscreen that is sensitive to smartphones.

## **Do not use toilet paper**

Never use toilet paper or any other paper to clean the smartphone because sand particles on the paper can scratch the screen, and the pulp particles may cling to the device slot.

Therefore, you should only use soft and dry towels, preferably a specialized towel to wipe the device. Or better yet, the cloth is included when buying a screen sticker.

## **Don't forget to clean the connection ports**

Many users when cleaning have forgotten important positions such as charging ports, headset jacks, etc., so you should also pay attention to cleaning these positions. For those parts, use a cotton swab with little water and carefully scrub.

Above are some important notes when cleaning smartphones. Hope the article will be useful for you.
